CompTIA Tech+ Certification Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

A user is logged in but unable to access a shared folder on the network. Which of the following security concepts is in place?

- A. Accounting
- B. Authorization
- C. Authentication
- D. Non-repudiation

Answer: B

Explanation:

This scenario describes a situation where a user has already successfully logged into the system (i.e., has been authenticated) but

cannot access a particular network resource (the shared folder). This falls under the concept of authorization, which determines what actions or resources a user is permitted to access after authentication.

"Authorization is the process of granting or denying access to network resources once the user has been authenticated." - CompTIA ITF+ Official Study Guide Authentication verifies the identity of the user (e.g., username and password).

Authorization controls access rights (e.g., shared folders, files).

Accounting tracks user activity (e.g., audit logs).

Non-repudiation ensures actions or transactions cannot be denied later.

Therefore, the correct answer is B: Authorization.

NEW QUESTION # 16

A lab technician removes access from students who do not need to use a fileshare. Which of the following best describes this action?

- A. Single sign-on
- B. Multifactor authentication
- C. Non-repudiation
- D. Least privilege model

Answer: D

Explanation:

Removing unnecessary access to resources like fileshares follows the least privilege model, ensuring users only have the minimum permissions necessary for their tasks.

Other options:

*Non-repudiation ensures actions cannot be denied,

*Multifactor authentication involves multiple verification steps,

*Single sign-on allows one login for multiple systems.

NEW QUESTION # 17

A technician identifies the potential cause of a problem. Which of the following troubleshooting steps should the technician take next?

- A. Verify system functionality.
- B. Test the theory.
- C. Document the findings.
- D. Create a plan of action.

Answer: B

Explanation:

After identifying the potential cause of a problem, the next step is to test the theory to confirm if the suspected cause is correct before proceeding with a solution.

Other options:

*Create a plan of action and verify system functionality come after confirmation,

*Document the findings is done after resolution.

NEW QUESTION # 18

A user needs to securely access a remote network from home. Which of the following should the user utilize for secure remote access?

- A. LAN
- B. DNS
- C. VPN
- D. FTP

Answer: C

Explanation:

A VPN (Virtual Private Network) allows users to securely connect to a remote network over the internet by encrypting the connection.

Other options:

*LAN is a local network,

*FTP transfers files but is not secure by default,

*DNS resolves domain names and doesn't provide secure access.

NEW QUESTION # 19

A user finds a USB device and plugs it into a laptop. The laptop does not detect the USB device. Which of the following is the most likely cause of this issue?

- A. Insufficient memory
- B. Account permissions
- C. Anti-malware
- **D. Disabled port**

Answer: D

Explanation:

If a USB port is disabled in the BIOS or device manager, the system won't detect devices connected to it. This is the most likely cause if nothing happens when a USB device is inserted.

"Hardware ports can be disabled via firmware settings or device policies, which prevents detection of peripherals." - CompTIA ITF+ Hardware Troubleshooting Correct answer: A
