SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which of the following objects can you assign to a resource? Note: There are 3 correct answers to this question.

- A. Resource group
- B. Queue
- C. Bin access type
- D. Resource type
- E. Handling unit type

Answer: B,C,D

Explanation:

- * Objects Assignable to a Resource
- * Queue (A): Assigning a queue to a resource ensures tasks in SAP EWM are routed to the correct resource for execution. Queues act as a logical group of tasks.
- * Bin Access Type (B): Defines how a resource can access bins based on accessibility requirements (e.g., high racks, ground-level storage).
- * Resource Type (C): Defines the capabilities of a resource, such as forklifts or manual labor, ensuring task assignment aligns with resource capabilities.
- * Excluded Options
- * Handling Unit Type (D): Handling unit types are not directly assigned to resources.
- * Resource Group (E): While resource groups are used to group similar resources, they are not directly assigned to resources.
- * SAP S/4HANA Cloud Private Edition Reference
- * Refer to SAP EWM documentation under Resource Management and Queue Assignment for the configuration details.

NEW QUESTION # 28

What are characteristics of the early capacity check? Note: There are 2 correct answers to this question.

- A. It is only available when working with mobile devices
- B. It happens during the warehouse task creation
- C. It is done during the actual putaway process
- D. It is based on capacities of bin types

Answer: B,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The early capacity check in SAP EWM ensures bins can accommodate stock before task execution. Option C ("It happens during the warehouse task creation") is correct as it occurs when tasks are generated, and option D ("It is based on capacities of bin types") is correct because it uses bin type capacity data, both configured in SPRO: SCM Extended Warehouse Management > Goods Receipt Process > Capacity Check. Option A (mobile devices) is incorrect as it's not device-specific, and option B (during putaway) is too late for an "early" check.

NEW QUESTION # 29

Which of the following are types of data contained in SAP S/4HANA Cloud? Note: There are 3 correct answers to this question.

- A. Master
- B. Configuration
- C. Transaction
- D. Organization
- E. Business

Answer: A,B,C

NEW QUESTION # 30

What can you do with a storage group? Note: There are 2 correct answers to this question.

- A. Assign it to multiple storage bins.
- B. Assign it as an intermediate storage group.
- C. Use it in process-oriented and layout-oriented storage control.
- D. Use it to define a logical or physical breakdown of a storage type.

Answer: A,C

Explanation:

A storage group in SAP EWM provides the following functionalities:

* B. Assign it to Multiple Storage Bins:

* Storage groups can group multiple bins for logical or operational purposes.

* C. Use it in Process-Oriented and Layout-Oriented Storage Control:

* Storage groups are critical for defining steps in process-oriented or layout-oriented storage control, especially when managing complex storage operations.

Incorrect Options:

* A: Storage types are defined independently, and storage groups do not directly break them down.

* D: There is no direct configuration for assigning a storage group as an intermediate storage group.

References:

* SAP EWM Documentation: Storage Group Configuration

* SAP Help Portal: Using Storage Groups in Storage Control

NEW QUESTION # 31

Which stocks can be displayed in the SAP Extended Warehouse Management warehouse management monitor? Note: There are 2 correct answers to this question.

- A. Stock in transit
- B. Reserved stock
- C. Stock in transportation units
- D. Stock on resources

Answer: B,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The warehouse management monitor in SAP EWM provides visibility into various stock types. Option C ("Reserved stock") is

correct as it shows stock allocated for specific tasks or orders, viewable under nodes like "Stock and Bin" in transaction /SCWM/MON. Option D ("Stock on resources") is correct because it displays stock currently handled by resources (e.g., forklifts), also accessible in the monitor. Option A ("Stock in transit") is managed between warehouses and not typically detailed in the EWM monitor, while option B ("Stock in transportation units") relates to transportation management, not warehouse stock visibility.

NEW QUESTION # 32

With the intense competition in labor market, it has become a trend that a lot of people, including many students, workers and so on, are trying their best to get a C_S4EWM_2023 certification in a short time. The C_S4EWM_2023 exam prep is produced by our expert, is very useful to help customers pass their exams and get the certificates in a short time.
