Answer:

Explanation:

	Answer Area	
Scale-out	Scale-out	Add more servers to do the workload
Scale-up	Scale-up	Add more resources (such as processors and memory) to existing servers
	Scale-out	Add an additional two-socket system to an existing VMware cluster
	Scale-up	Add two additional processors to a four-socket system currently equipped with only two processors

Explanation:

Scale-out: This is a scaling approach that involves adding more servers or nodes to a system to increase its capacity and performance. It is also known as horizontal scaling. It can help distribute the workload across multiple servers and improve availability and fault tolerance. Scale-up: This is a scaling approach that involves adding more resources (such as processors, memory, storage or network) to an existing server or node to increase its capacity and performance. It is also known as vertical scaling. It can help improve the performance of a single server and reduce the complexity of managing multiple servers.

NEW QUESTION # 96

your customer runs a small datacenter and their storage requirements change on a month-to-month basis. They want to easily monitor their Cloud costs/usage and grow their resources.

Which self-service platform will fill their requirements?
