

# Pdf Demo DVA-C02 Download - Reliable New DVA-C02 Exam Bootcamp and Authorized AWS Certified Developer - Associate Latest Materials

BONUS!!! Download part of GetValidTest DVA-C02 dumps for free: <https://drive.google.com/open?id=1GKydyiKdE5fmWzjAXycwHBk0KBHluJg>

A good learning platform should not only have abundant learning resources, but the most intrinsic things are very important, and the most intuitive things to users are also indispensable. The DVA-C02 test material is professional editorial team, each test product layout and content of proofreading are conducted by experienced professionals, so by the editor of fine typesetting and strict check, the latest DVA-C02 Exam Torrent is presented to each user's page is refreshing, and ensures the accuracy of all kinds of DVA-C02 learning materials is extremely high.

Earning the Amazon DVA-C02 certification demonstrates an individual's expertise in developing and deploying applications on the AWS platform. It also validates an individual's ability to use AWS services effectively to design and deploy scalable, reliable, and cost-effective applications. AWS Certified Developer - Associate certification can open up various job opportunities in the cloud computing industry, including roles such as AWS developer, cloud architect, and DevOps engineer, among others.

Amazon DVA-C02 exam is a challenging certification exam that requires extensive knowledge and hands-on experience in developing and maintaining applications on AWS. DVA-C02 Exam consists of 65 multiple-choice and multiple-response questions that must be completed within 130 minutes. The passing score for the exam is 720 out of 1000 points. Upon passing the exam, candidates will receive the AWS Certified Developer - Associate certification, which demonstrates their proficiency in developing and maintaining applications on AWS and validates their skills in the rapidly growing field of cloud computing.

## New DVA-C02 Exam Bootcamp, DVA-C02 Latest Materials

Free update for 365 days is available if you buy DVA-C02 exam braindumps from us. That is to say, in the following year, you can get the latest information about the DVA-C02 exam dumps timely. And the update version will be sent to your email automatically. In addition, the DVA-C02 Exam Braindumps are compiled by experienced experts who are quite familiar with the dynamics about the exam center, therefore the quality and accuracy of the DVA-C02 exam braindumps can be guaranteed.

## Amazon AWS Certified Developer - Associate Sample Questions (Q171-Q176):

### NEW QUESTION # 171

A company has built a serverless application for its e-commerce website. The application includes a REST API in Amazon API Gateway that invokes an AWS Lambda function. The Lambda function processes data and stores the data in Amazon DynamoDB table. The Lambda function calls a third-party stock application API to process the order. After the order is processed, the

Lambda function returns an HTTP 200 status code with no body to the client.

During peak usage when the API calls exceeds a certain threshold, the third-party stock application sometimes fails to process the data and responds with error messages. The company needs a solution that will not overwhelm the third-party stock application. Which solution will meet these requirements?

- A. Configure the REST API in API Gateway to write the requests directly into DynamoDB. Configure a DynamoDB intrinsic function to perform the transformation. Set up a DynamoDB stream to call the third-party stock application API with each new row. Delete the Lambda function.
- **B. Configure the REST API in API Gateway to write the requests directly into an Amazon Simple Queue Service (Amazon SQS) queue. Configure the Lambda function with a reserved concurrency equal to the third-party stock application's threshold. Set Lambda function to process the messages from the SQS queue.**
- C. Configure the REST API in API Gateway to write the requests directly into Amazon Athena. Configure the transformation of the data by using SQL with multiple query result locations set up to point to the DynamoDB table and the third-party stock fulfillment application API. Delete the Lambda function.
- D. Configure the REST API in API Gateway to write the requests directly into an Amazon Simple Notification Service (Amazon SNS) topic. Configure the Lambda function with a provisioned concurrency equal to the third-party stock application's threshold. Set the Lambda function to process the messages from the SNS topic.

**Answer: B**

#### NEW QUESTION # 172

A company has a website that is developed in PHP and is launched using AWS Elastic Beanstalk. There is a new version of the website that needs to be deployed in the Elastic Beanstalk environment. The company cannot tolerate having the website offline if an update fails. Deployments must have minimal impact and rollback as soon as possible.

- A. All at once
- **B. Immutable**
- C. Snapshots
- D. Rolling

**Answer: B**

Explanation:

The Immutable deployment method is the best choice when a company requires minimal downtime and automatic rollback in case of a failure. Here's why:

- \* In Immutable deployments, a new set of instances is launched with the updated version. These instances are tested and validated before they replace the old instances. This ensures zero downtime and immediate rollback if the deployment fails.
- \* All at once (A) causes downtime because the update replaces all instances simultaneously.
- \* Rolling deployments (B) update a few instances at a time, but if a failure occurs midway, downtime or partial unavailability can happen.
- \* Snapshots (C) are not a deployment strategy in Elastic Beanstalk.

#### NEW QUESTION # 173

A company needs to harden its container images before the images are in a running state. The company's application uses Amazon Elastic Container Registry (Amazon ECR) as an image registry. Amazon Elastic Kubernetes Service (Amazon EKS) for compute, and an AWS CodePipeline pipeline that orchestrates a continuous integration and continuous delivery (CI/CD) workflow.

Dynamic application security testing occurs in the final stage of the pipeline after a new image is deployed to a development namespace in the EKS cluster. A developer needs to place an analysis stage before this deployment to analyze the container image earlier in the CI/CD pipeline.

Which solution will meet these requirements with the MOST operational efficiency?

- A. Add an action to the deployment stage of the pipeline so that the action occurs before the deployment to the EKS cluster. Configure ECR basic image scanning to scan on image push. Use an AWS Lambda function as the action provider. Configure the Lambda function to check the scan results and to fail the pipeline if there are findings.
- **B. Create a new CodePipeline stage that occurs after the container image is built. Configure ECR basic image scanning to scan on image push. Use an AWS Lambda function as the action provider. Configure the Lambda function to check the scan results and to fail the pipeline if there are findings.**
- C. Build the container image and run the docker scan command locally. Mitigate any findings before pushing changes to the source code repository. Write a pre-commit hook that enforces the use of this workflow before commit.

- D. Create a new CodePipeline stage that occurs after source code has been retrieved from its repository. Run a security scanner on the latest revision of the source code. Fail the pipeline if there are findings.

**Answer: B**

Explanation:

The solution that will meet the requirements with the most operational efficiency is to create a new CodePipeline stage that occurs after the container image is built. Configure ECR basic image scanning to scan on image push. Use an AWS Lambda function as the action provider. Configure the Lambda function to check the scan results and to fail the pipeline if there are findings. This way, the container image is analyzed earlier in the CI/CD pipeline and any vulnerabilities are detected and reported before deploying to the EKS cluster. The other options either delay the analysis until after deployment, which increases the risk of exposing insecure images, or perform analysis on the source code instead of the container image, which may not capture all the dependencies and configurations that affect the security posture of the image.

Reference: Amazon ECR image scanning

#### NEW QUESTION # 174

A development team wants to build a continuous integration/continuous delivery (CI/CD) pipeline. The team is using AWS CodePipeline to automate the code build and deployment. The team wants to store the program code to prepare for the CI/CD pipeline.

Which AWS service should the team use to store the program code?

- A. AWS CodeDeploy
- **B. AWS CodeCommit**
- C. AWS CodeArtifact
- D. Amazon CodeGuru

**Answer: B**

Explanation:

AWS CodeCommit is a service that provides fully managed source control for hosting secure and scalable private Git repositories. The development team can use CodeCommit to store the program code and prepare for the CI/CD pipeline. CodeCommit integrates with other AWS services such as CodePipeline, CodeBuild, and CodeDeploy to automate the code build and deployment process.

#### NEW QUESTION # 175

A developer uses Amazon S3 Event Notifications to invoke AWS Lambda functions. The Lambda functions process images after the images are uploaded to S3 buckets. The developer has set up a development S3 bucket, a production S3 bucket, a development Lambda function, and a production Lambda function in the same AWS account.

The developer notices that uploads to the development S3 bucket wrongly invoke the production Lambda function. The developer must prevent development data from affecting the production Lambda function.

What should the developer do to meet these requirements?

- A. Separate the development environment and the production environment into their own AWS accounts. Update the execution role for each Lambda function. Add a policy that allows the execution role to read from only the S3 bucket that is in the same account.
- B. Separate the development environment and the production environment into their own AWS accounts. Add a resource policy to the Lambda functions to allow only S3 bucket events in the same account to invoke the functions.
- **C. Update the S3 bucket policy for the production S3 bucket to invoke the production Lambda function. Update the S3 bucket policy for the development S3 bucket to invoke the development Lambda function.**
- D. Update the execution role for the production Lambda function. Add a policy that allows the execution role to read from only the production S3 bucket.

**Answer: C**

## NEW QUESTION # 176

.....

This pdf covers all of the DVA-C02 Exam Questions from the previous exams as well as those that will appear in the upcoming Amazon DVA-C02 exam. The DVA-C02 PDF exam questions are compiled according to the latest exam syllabus to ensure your success. The Amazon DVA-C02 PDF exam questions are also printable to make handy notes.
