

Pass Guaranteed 300-410 - Perfect Implementing Cisco Enterprise Advanced Routing and Services Valid Dumps

Cisco 300-410

Implementing Cisco Enterprise Advanced Routing and Services (ENARSI)

Cisco 300-410 Dumps Available Here at:

<https://www.certification-questions.com/cisco-exam/300-410-dumps.html>

Enrolling now you will get access to 58 questions in a unique set of 300-410 dumps

Question 1

Refer to the exhibit. Users in the branch network of 2001:db8:0:4::/64 report that they cannot access the Internet. Which command is issued in IPv6 router EIGRP 100 configuration mode to solve this issue?

Options:

- A. Issue the eigrp stub command on R1.
- B. Issue the no eigrp stub command on R1.
- C. Issue the eigrp stub command on R2.

300-410 Test Guide - Implementing Cisco Enterprise Advanced Routing and Services Study Question & 300-410 Exam Questions

TestValid enjoys the reputation of a reliable study material provider to those professionals who are keen to meet the challenges of

industry and work hard to secure their positions in it. If you are preparing for a 300-410 Certification test, the 300-410 exam dumps from TestValid can prove immensely helpful for you in passing your desired 300-410 exam.

Cisco 300-410 Exam, also known as Implementing Cisco Enterprise Advanced Routing and Services, is a certification exam that validates one's knowledge and skills in implementing advanced routing technologies and services in enterprise-level networks. 300-410 exam is a part of the Cisco Certified Specialist - Enterprise Advanced Infrastructure Implementation certification track and is designed for network professionals who want to enhance their knowledge and skills in routing technologies and services.

Cisco Implementing Cisco Enterprise Advanced Routing and Services Sample Questions (Q600-Q605):

NEW QUESTION # 600

Which attribute eliminates LFAs that belong to protected paths in situations where links in a network are connected through a common fiber?

- A. shared risk link group-disjoint
- B. lowest-repair-path-metric
- C. interface-disjoint
- D. linecard-disjoint

Answer: A

Explanation:

Reference:

https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/iproute_eigrp/configuration/xr-3s/asr1000/ire-xr-3s-asr1000/ire-ipfr.html

NEW QUESTION # 601

Exhibit:

BGP is flapping after the Cpp policy is applied. What are the two solutions to fix the issue?
(Choose two)

- A. Configure IP CEF to CoPP policy and BGP to work
- B. Configure a higher value for CIR under the class COPP-CRITICAL-7600
- C. Configure a three-color policer instead of two-color policer under class COPP-CRITICAL-7600
- D. Configure BGP in the COPP-CRITICAL-7600 ACL
- E. Configure a higher value for CIR under the default class to allow more packets during peak traffic

Answer: D,E

Explanation:

The policy-map COPP-7600 only rate-limit HTTP & HTTPS traffic (based on the ACL conditions) so any BGP packets will be processed in the class "class-default", which drops exceeded BGP packets. Therefore we have two ways to solve this problem:

+ Add BGP to the ACL with the statement "permit tcp any any eq bgp"

+ Configure higher value for CIR in default class as 2Mbps is too low for web traffic (http & https)

NEW QUESTION # 602

Refer to the exhibit. The 130.130.130.0/24 route shows in the R2 routing table but is getting filtering toward R3. Which action resolves the issue?

- A. IGP synchronization must be disabled on R2.
- B. The outgoing filter list for all interfaces must be set on R2.
- C. Automatic route summarization must be enabled on R2.
- D. The incoming filter list for all interfaces must be set on R2.

Answer: A

NEW QUESTION # 603

Refer to the exhibit.

Which two commands provide the administrator with the information needed to resolve the issue? (Choose two.)

- A. debug snmpv3 engine-id
- **B. debug snmp packet**
- **C. Show snmp user**
- D. debug snmp engine-id
- E. showsnmpv3 user

Answer: B,C

Explanation:

There are 3 values in the SNMPv3 header that must match for the communication to take place: snmpEngineID, snmpEngineTime, snmpEngineBoots. The error received indicates a problem with the EngineID value: "authentication failure, Unknown Engine ID" To specify the Engine ID, we can use the command "show snmp user". The following example specifies the username as abcd with Engine ID: 00000009020000000C025808:

The "debug snmp packet" command displays all SNMP packets that are arriving and being replied to.

NEW QUESTION # 604

Refer to the exhibit. Redistribution is enabled between the routing protocols, and now PC2 PC3, and PC4 cannot reach PC1. What are the two solutions to fix the problem? (Choose two.)

- A. Filter all routes except RIP routes when redistributing into EIGRP in R2.
- B. Filter all routes except EIGRP routes when redistributing into OSPF in R3.
- C. Filter RIP AND OSPF routes back into OSPF from EIGRP when redistributing into OSPF in R2
- **D. Filter RIP routes back into RIP when redistributing into RIP in R2**
- **E. Filter OSPF routes into RIP FROM EIGRP when redistributing into RIP in R2.**

Answer: D,E

Explanation:

Even PC2 cannot reach PC1 so there is something wrong with RIP redistribution in R2. Because RIP has higher Administrative Distance (AD) value than OSPF and EIGRP so it will be looped when doing mutual redistribution.
