CISM Valid Braindumps Pdf | CISM Reliable Exam Materials

Our users are all over the world and they have completed their exams through the help of our CISM study guide. As you can see the

feedbacks from our loyal customers, all of them are grateful to our CISM exam braindumps and become successful people with the CISM Certification. And what are you waiting for? Just selecting our CISM learning materials, the next one to get an international certificate is you!

The CISM exam is a four-hour computer-based test that consists of 150 multiple-choice questions. The passing score for the exam is 450 out of a possible 800 points. Candidates must have at least five years of experience in information security management, with three of those years in a role directly related to the four domains covered by the exam. The CISM Certification is valid for three years, after which candidates must recertify by completing continuing education requirements or retaking the exam.

ISACA Certified Information Security Manager Sample Questions (Q672-Q677):

NEW QUESTION # 672

Which of the following is the BEST way to monitor for advanced persistent threats (APT) in an organization?

- A. Search for threat signatures in the environment.
- B. Browse the Internet to learn of potential events
- C. Network with peers in the industry to share information.
- **D. Search for anomalies in the environment**

Answer: D

Explanation:

An advanced persistent threat (APT) is a stealthy and sophisticated attack that aims to compromise and maintain access to a target network or system over a long period of time, often for espionage or sabotage purposes. APTs are difficult to detect by conventional security tools, such as antivirus or firewalls, that rely on signatures or rules to identify threats. Therefore, the best way to monitor for APTs is to search for anomalies in the environment, such as unusual network traffic, user behavior, file activity, or system configuration changes, that may indicate a compromise or an ongoing attack. NEW QUESTION # 673

Which of the following BEST enables an organization to operate smoothly with reduced capacities when service has been disrupted?

- A. Incident response plan
- B. Disaster recovery plan (DRP)
- C. Crisis management plan
- **D. Business continuity plan (BCP)**

Answer: D

Explanation:

Explanation

A business continuity plan (BCP) is the best option that enables an organization to operate smoothly with reduced capacities when service has been disrupted, as it defines the processes and procedures to maintain or resume critical business functions and minimize the impact of the disruption on the organization's objectives, customers, and stakeholders. A BCP also includes strategies for resource management, communication, recovery, and testing.

NEW QUESTION # 674

Which of the following is the MOST effective method to help ensure information security incidents are reported?

- A. Implementing an incident management system
- **B. Providing information security awareness training to employees**
- C. Integrating information security language in conditions of employment
- D. Integrating information security language in corporate compliance rules

Answer: B

Explanation:

Section: INFORMATION SECURITY PROGRAM MANAGEMENT

NEW QUESTION # 675

Which of the following is the MOST effective way to determine the alignment of an information security program with the business strategy?

- A. Review key performance indicators (KPIs).
- **B. Engage business process owners.**
- C. Evaluate the results of business continuity testing.
- D. Evaluate the business impact of incidents.

Answer: B

Explanation:

Explanation

The most effective way to determine the alignment of an information security program with the business strategy is D. Engage business process owners. This is because business process owners are the key stakeholders who are responsible for defining, executing, and monitoring the business processes that support the organization's mission, vision, and goals. By engaging them, the information security manager can understand their needs, expectations, and challenges, and ensure that the information security program is aligned with their requirements and objectives. Engaging business process owners can also help to establish trust, collaboration, and communication between the information security function and the business units, and foster a culture of security awareness and accountability.

Business process owners are the key stakeholders who are responsible for defining, executing, and monitoring the business processes that support the organization's mission, vision, and goals. By engaging them, the information security manager can understand their needs, expectations, and challenges, and ensure that the information security program is aligned with their requirements and objectives.
