

Features of SAP C-CPI-2506 PDF Dumps Formate

[Pass SAP C CPI 2506 Exam | Latest C CPI 2506 Dumps & Practice Exams - Cert007](#)

Exam : **C_CPI_2506**

Title : SAP Certified Associate -
Integration Developer

https://www.cert007.com/exam/c_cpi_2506/

1 / 5

There are many certificates for you to get but which kind of certificate is most authorized, efficient and useful? We recommend you the C-CPI-2506 certificate because it can prove that you are competent in some area and boost outstanding abilities. If you buy our C-CPI-2506 study materials you will pass the test smoothly and easily. We boost professional expert team to organize and compile the C-CPI-2506 Training Materials diligently and provide the great service which include the service before and after the sale, the 24-hours online customer serviv on our C-CPI-2506 exam questions.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 2	<ul style="list-style-type: none">SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

Topic 3	<ul style="list-style-type: none"> Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	<ul style="list-style-type: none"> SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

C-CPI-2506 Valid Exam Vce & C-CPI-2506 Test Labs

For your convenience, FreePdfDump has prepared SAP Certified Associate - Integration Developer exam study material based on a real exam syllabus to help candidates go through their exams. Candidates who are preparing for the C-CPI-2506 Exam suffer greatly in their search for preparation material. You would not need anything else if you prepare for the exam with our C-CPI-2506 Exam Questions.

SAP Certified Associate - Integration Developer Sample Questions (Q35-Q40):

NEW QUESTION # 35

What kind of editor can you use to manipulate integration flows?

- A. Command-line editor
- B. Code editor
- C. Graphical editor

Answer: C

Explanation:

To manipulate integration flows, you can use a graphical editor that is provided by SAP Integration Suite. The graphical editor allows you to visualize and edit your integration flows using a drag-and-drop interface. It also provides a palette of icons that represent different integration components and actions, such as senders, receivers, routers, mappers, transformers, and so on. You can use the graphical editor to design and configure complex integration scenarios in a user-friendly way. NEW QUESTION # 36

Which SAP Integration Suite component delivers the Cloud Event to the "emis-s4hana-uc123" message queue?

- A. Open Connector
- B. Event Mesh
- C. API Management
- D. Process Integration

Answer: B

Explanation:

In SAP Integration Suite, the component responsible for delivering Cloud Events to message queues is Event Mesh.

Event Mesh handles event-driven communication and manages message queues like emis-s4hana-uc123.

Process Integration (PI/PO) is on-premise middleware, not part of Integration Suite cloud services.

API Management handles APIs, not messaging events.

Open Connectors provides connectivity to third-party SaaS apps, not queue management.

Thus, the Cloud Event is delivered to the message queue via Event Mesh.

NEW QUESTION # 37

How does the increased number of API calls in a microservices architecture impact API management and monitoring within an SAP Integration Suite landscape?

- A. Increased API calls necessitate less robust API management tools and simplified monitoring capabilities within the SAP Integration Suite.
- B. performance, security and traceability across the distributed microservices.
- C. Increased API calls improve API management efficiency and reduce the need for extensive monitoring within the SAP Integration Suite.
- D. Reduced API calls simplify API management and minimize monitoring needs within the SAP Integration Suite.
- E. Increased API calls necessitate more robust API management tools and comprehensive monitoring capabilities within the SAP Integration Suite

Answer: E

Explanation:

In a microservices architecture, applications are decomposed into multiple smaller services communicating via APIs. This results in: Increased API traffic due to inter-service communication.

Higher need for governance: enforcing policies, security, throttling, and quotas.

Comprehensive monitoring required to trace calls across multiple distributed services to ensure performance, reliability, and compliance.

SAP Integration Suite's API Management provides these capabilities:

Traffic management (quotas, rate limiting).

Security policies (OAuth, API keys).

End-to-end monitoring & analytics for distributed calls.

Thus, the correct answer highlights the need for more robust API management and monitoring in high-volume, microservices-driven landscapes.

NEW QUESTION # 38

Which SAP Cloud Integration process event allows you to run integration flows directly after deployment?

- A. Timer
- B. Message Digest
- C. Content Modifier
- D. Router

Answer: A

Explanation:

A Timer event allows you to run integration flows directly after deployment. A Timer event is triggered by a predefined schedule or interval, such as every hour, every day, or every month. You can use a Timer event to initiate an integration process based on a time-based condition. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 39

In your integration flow process, the request reply returns a message with namespaces. What can you do to delete namespaces from this message? Note: There are 2 correct answers to this question.

- A. Use a Content Modifier
- B. Set up the request reply to delete the namespaces
- C. Use an XSLT mapping
- D. Set up the namespace mapping in the Runtime Configuration.

Answer: A,C

Explanation:

A Content Modifier is a step in an integration flow that allows you to modify the message header or body using expressions or constants. You can use a Content Modifier to delete namespaces from a message by using expressions that remove the namespace declarations or prefixes from the XML elements or attributes. For example, you can use the expression `replace($body,'xmlns:ns[0-`

9] += "\[
