## NCP-DB-6.10 Valid Test Tips - Sample NCP-DB-6.10 Questions Answers

PrepAwayETE is also offering 90 days free NCP-DB-6.10 updates. You can update your NCP-DB-6.10 study material for one year from the date of purchase. The NCP-DB-6.10 updated package will include all the past questions from the past papers. You can pass the NCP-DB-6.10 exam easily with the help of the PDF dumps included in the package. It will have all the questions that you should cover for the NCP-DB-6.10 NCP-DB-6.10 exam. If you are facing any issues with the products you have, then you can always contact our 24/7 support to get assistance.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q194-Q199):

### NEW QUESTION # 194

An administrator needs to protect a database with a Point In Time Recovery (PITR) SLA that provides a minimum of seven days of log recovery.

What is the minimum Default SLA that meets this requirement?

- A. DEFAULT\_008 BRASS SLA
- B. DEFAULT\_008 BRONZE SLA
- C. DEFAULT\_008 GOLD SLA
- D. DEFAULT\_008 SILVER SLA

**Answer: D**

Explanation:

Nutanix Era (NDB) utilizes DEFAULT\_008 SLAs with varying frequencies for snapshots and log backups to achieve different recovery point objectives (RPOs). Here's how they compare:

DEFAULT\_008 GOLD SLA: Typically has frequent log backups (e.g., every 15 minutes) and snapshots every few hours. This is designed for critical databases with very low RPOs.

DEFAULT\_008 SILVER SLA: Offers a balance between protection and resource usage. Log backups might occur every hour with

snapshots less frequently. This SLA is often suitable for databases requiring a good RPO without being overly resource-intensive. DEFAULT\_008 BRONZE SLA: Has less frequent log backups (e.g., every few hours) and less frequent snapshots. This is used for databases with less stringent RPO requirements. DEFAULT\_008 BRASS SLA: This has infrequent log backups and is usually considered the least protective SLA with the longest potential RPO

#### NEW QUESTION # 195

When the NDB upgrade includes updates to the out-of-the-box (OOB) software profiles, what happens to older OOB software profile versions when upgrading NDB?

- A. If the database VMs using the software profiles are using Time Machines and have had a successful snapshot in the last 24 hours before the patch.
- **B. If the software profiles are not in use, NDB deletes all versions of the profiles from the metadata and protection domains.**
- C. If the database VMs are not using the base version of the software profile NDB deletes all versions of the profiles from the metadata and protection domains.
- D. If the database VM using the software profiles are shutdown, NDB deletes all versions of the profiles from the metadata and protection domains.

**Answer: B**

Explanation:

When upgrading NDB and the upgrade includes updates to out-of-the-box (OOB) software profiles (e.g., predefined profiles for database software like PostgreSQL, SQL Server, etc.), NDB manages older versions of these profiles based on their usage. If the older OOB software profiles are not actively in use by any database VMs, NDB automatically deletes all versions of those profiles from its metadata and associated protection domains during the upgrade process. This cleanup mechanism helps maintain a lean and efficient system by removing obsolete profiles that are no longer relevant or required.

#### NEW QUESTION # 196

Which two options can NDB leverage to refresh a database clone? (Choose two.)

- A. Cerebro logs
- **B. Snapshots**
- **C. Transaction logs**
- D. Templates

**Answer: B,C**

Explanation:

NDB can leverage snapshots and transaction logs to refresh a database clone to the latest state of the source database. Snapshots are point-in-time copies of the database that are stored on the Nutanix cluster. Transaction logs are records of the changes made to the database after the snapshot was taken. NDB can use either snapshots or transaction logs, or a combination of both, to refresh a database clone. Cerebro logs and templates are not used for refreshing database clones. Cerebro logs are used for log catch-up operations, which are different from refresh operations. Templates are used for provisioning new databases, not for refreshing existing ones.

#### NEW QUESTION # 197

Which step 's optional when completing the NDE Wizard?

- A. Services
- **B. Network Segmentation**
- C. Storage Container
- D. ND8 Cluster Name

**Answer: B**

Explanation:

When completing the NDB (Nutanix Database Service) Wizard for initial setup or configuration, certain steps are mandatory to ensure the environment is properly configured, while others are optional based on specific needs. Network Segmentation is an optional step that allows for advanced network isolation and configuration, but it is not required for basic NDB deployment.

Mandatory steps include specifying the NDB Cluster Name, selecting a Storage Container, and configuring Services (e.g., database services), as these are essential for NDB to function and manage databases.

### NEW QUESTION # 198

An administrator is experiencing issues with NDB and some of its operations. A case has been logged with Nutanix Support and a request has been made to gather a diagnostics bundle. Where are two valid places to generate and download a diagnostics bundle? (Choose two.)

- A. Prism Central GUI
- **B. NDB CLI**
- C. Prism Element GUI
- **D. NDB GUI**

**Answer: B,D**

Explanation:

When an administrator experiences issues with NDB and Nutanix Support requests a diagnostics bundle, it can be generated from two valid locations. The NDB GUI provides an option under the administration or support section to create and download the bundle, offering a user-friendly interface. Alternatively, the NDB CLI allows generation via specific commands (e.g., era diagnostics collect), providing a scriptable approach. Both methods are supported for troubleshooting and support purposes.

### NEW QUESTION # 199

.....

We attract customers by our fabulous NCP-DB-6.10 certification material and high pass rate, which are the most powerful evidence to show our strength. We are so proud to tell you that according to the statistics from our customers' feedback, the pass rate among our customers who prepared for the exam with our NCP-DB-6.10 Test Guide have reached as high as 99%, which definitely ranks the top among our peers. Hence one can see that the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 learn tool compiled by our company are definitely the best choice for you.
