As a market leader, our company is able to attract quality staffs, it actively seeks out those who are energetic, persistent, and professional to various D-PWF-OE-00 certificate and good communicator. And we strongly believe that the key of our company's success is its people, skills, knowledge and experience. Over 50% of the account executives and directors have been with the Group for more than ten years. The successful selection, development and D-PWF-OE-00 training of personnel are critical to our company's ability to provide a high pass rate of D-PWF-OE-00 exam questions for you to pass the D-PWF-OE-00 exam.

EMC D-PWF-OE-00 Exam Syllabus Topics:

Topic	Details
Topic 1	Expanding a PowerFlex Cluster: This domain focuses on cluster expansion and maintenance including using maintenance modes, adding nodes, configuring Storage Data Servers and Meta Data Managers, and understanding PowerFlex integration with APEX.
Topic 2	PowerFlex Components and Resource Discovery: This domain covers identifying PowerFlex hardware models and software components, using management interfaces to interact with the system, and completing essential post-installation configuration tasks.
Topic 3	PowerFlex Storage: This domain addresses daily storage operations including creating and managing volumes, configuring shared file systems, and working with storage data targets.
Topic 4	PowerFlex Upgrades: This domain covers understanding upgrade procedures and executing cluster upgrades to newer software versions.
Topic 5	PowerFlex Security: This section addresses security administration through managing user accounts and access privileges, integrating CloudLink for encryption, and configuring system alerting.
Topic 6	Protecting PowerFlex Storage: This section covers data protection through snapshot technology for point-in-time copies and volume replication between clusters for disaster recovery.

EMC Dell PowerFlex Operate Exam Sample Questions (Q84-Q89):

NEW QUESTION # 84

What is a key requirement for adding new nodes to an existing PowerFlex cluster?

- A. Assign VLAN tags for replication traffic
- **B. Validate hardware compatibility with the cluster**
- C. Ensure the new nodes are in the same Protection Domain
- D. Preconfigure deduplication on the new nodes

Answer: B

Explanation:

Validate hardware compatibility (Option C): The most critical technical requirement is ensuring the new nodes are compatible with the existing cluster. This includes verifying that the CPU, RAM, and most importantly, the network interface cards (NICs) and storage devices match the existing nodes or are supported in a mixed-node configuration. Adding a node with incompatible hardware can cause instability or performance degradation (the "straggler" effect).

NEW QUESTION # 85

What is the minimum bandwidth requirement for replicating volumes between PowerFlex clusters?

- A. 10 Gbps
- B. 1 Gbps
- **C. 100 Mbps**
- D. 10 Mbps

Answer: C

Explanation:

100 Mbps: While PowerFlex replication is highly efficient and only sends unique data chunks (deltas), the supported minimum reliable bandwidth for a WAN link between clusters is typically 100 Mbps.

Reasoning: Below this speed, even moderate change rates in a production database would likely cause the replication journal to fill up faster than data can be drained to the remote site. This would lead to a "Buffer Full" state, causing the replication to pause or the system to lose its Recovery Point Objective (RPO) compliance.

NEW QUESTION # 86

Which components can be monitored via the PowerFlex GUI? (Choose two).

- A. Network latency
- B. Virtual machine backups
- **C. System performance metrics**
- **D. Storage pool health**

Answer: C,D

Explanation:

The PowerFlex Dashboard provides a high-level view of the storage environment.

* Storage pool health (Option B): The GUI displays the capacity usage (Used vs. Free) and the health status (Green/Red) of all Storage Pools. It highlights if a pool is running out of space or has failed drives.

* System performance metrics (Option D): The dashboard features real-time graphs showing IOPS (Input/Output Operations Per Second), Bandwidth (MB/s), and Latency (ms) for the overall cluster, as well as for individual volumes and SDS nodes.

Incorrect Options:

* VM Backups (C) are managed by backup software (PowerProtect/Veeam), not the storage array GUI.

* Network Latency (A) is usually a switch/network statistic. While PowerFlex shows I/O latency, it does not act as a general network monitoring tool for switch-level latency.

NEW QUESTION # 87

What is the primary purpose of PowerFlex Manager?

- A. Manage virtual machines
- B. Create snapshots of storage volumes
- C. Configure fault sets
- **D. Automate deployment and lifecycle management**

Answer: D

Explanation:

PowerFlex Manager (PFxM) is the orchestration and automation appliance.

* Automate deployment and lifecycle management (Option B): PFXM is designed to take bare-metal servers and automatically deploy the OS, networking, and PowerFlex software to build a cluster. Once built, it handles the Lifecycle Management (LCM), automating complex tasks like firmware upgrades, software patches, and node expansions without downtime.

Incorrect Options: Managing VMs (A) is for vCenter. Creating snapshots (C) and configuring Fault Sets (D) are storage tasks performed via the PowerFlex GUI/Block Controller, whereas PFXM focuses on the infrastructure lifecycle.

NEW QUESTION # 88

Enabling Maintenance Mode on a node allows it to be removed from the cluster without impacting data availability. True. False.

- A. False
- **B. True**

Answer: B

Explanation:

* True: The specific purpose of Protected Maintenance Mode (PMM) is to ensure data availability.

* How it works: When you enable PMM on a node, the system checks the data chunks residing on that node. Before the node is allowed to effectively "leave" the cluster (stop serving I/O), PowerFlex copies (mirrors) that data to other nodes in the cluster. This ensures that even when the node is physically removed or rebooted, the cluster retains the required number of data copies (redundancy), ensuring no data is unavailable (DU) or lost (DL).

NEW QUESTION # 89
