C-SIGDA-2403 Latest Exam Papers | C-SIGDA-2403 Associate Level Exam

It can be said that all the content of the C-SIGDA-2403 prepare questions are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a

little practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the C-SIGDA-2403 Practice Guide provide questions and answers, you can simply pass the exam. This is a wise choice, and in the near future, after using our C-SIGDA-2403 exam braindumps, you will realize your dream of a promotion and a raise, because your pay is worth the rewards.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q54-Q59):

NEW QUESTION # 54
What are the goals of Business Process Management? Note: There are 3 correct answers to this question.

- A. To monitor and control processes
- B. To document processes
- C. To share processes
- D. To save processes
- E. To measure processes

Answer: A,B,E

Explanation:
Business Process Management (BPM) aims to systematically manage and optimize organizational processes.
The SAP Signavio Process Transformation Suite Documentation defines the goals:
* Exact Extract:"The goals of Business Process Management include:
* To Document Processes: Creating clear, standardized process models for understanding and communication.
* To Measure Processes: Analyzing process performance through metrics like cycle time or cost.
* To Monitor and Control Processes: Ensuring processes operate as intended and addressing deviations through governance and analytics." (SAP Signavio Process Transformation Suite Overview, section on "BPM Objectives").
* Explanation:
* Option B (To document processes):Documentation is a core BPM goal, creating models (e.g., BPMN diagrams in SAP Signavio Process Manager) to capture process details for reference and improvement.
* Option C (To measure processes):Measuring performance through KPIs, supported by SAP Signavio Process Intelligence, enables organizations to assess efficiency and identify optimization opportunities.
* Option D (To monitor and control processes):BPM involves ongoing monitoring (e.g., via the Collaboration Hub) and control (e.g., via Process Governance workflows) to ensure processes align with business objectives.
* Option A (To share processes)is incorrect as sharing is a means to achieve BPM goals (e.g., via the Collaboration Hub), not a goal itself.
* Option E (To save processes)is incorrect because "saving" is a technical action, not a strategic BPM objective.
Reference:SAP Signavio Process Transformation Suite Overview, section on "BPM Objectives"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 2: Process Management Objectives.

NEW QUESTION # 55
What is a variant in Process Mining?

- A. A variant backtracks the process flow
- B. A variant visualizes all tasks to complete the process
- C. A variant is a digital footprint of system-based events
- D. A variant is a set of cases with the same sequence of events

Answer: D

Explanation:
In Process Mining, a variant represents a unique sequence of activities performed in a process, as derived from event log data. The SAP Signavio Process Intelligence Documentation clearly defines this concept:
* Exact Extract:"A process variant is a unique sequence of activities (events) that a set of cases follows.
Each variant represents a distinct path through the process, and Process Mining tools like the Variant Explorer Widget identify and visualize these paths to show how processes are executed in reality." (SAP Signavio Process Intelligence User Guide, section on "Process Variants and Variant Explorer").
* Explanation:
* Option D (A variant is a set of cases with the same sequence of events):This is correct because a variant groups all cases that follow the identical sequence of activities, allowing analysts to identify common or deviant process paths. For example, in an order-

to-cash process, one variant might include "Order Created # Order Confirmed # Shipped," while another might include an additional "Order Revised" step.
* Option A (A variant is a digital footprint of system-based events)is incorrect because the digital footprint refers to the event log as a whole, not a specific variant. Variants are derived from this footprint during analysis.
* Option B (A variant visualizes all tasks to complete the process)is incorrect as variants show specific sequences, not all possible tasks. The Process Discovery Widget visualizes the overall process, not individual variants.
* Option C (A variant backtracks the process flow)is incorrect because backtracking is a function of widgets like Process Discovery, not the definition of a variant.
Reference:SAP Signavio Process Intelligence User Guide, section on "Process Variants and Variant Explorer"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 5: Process Mining Concepts.

NEW QUESTION # 56
What kind of information does guided analysis provide? Note: There are 3 correct answe rs to this questio n.

- A. Predefined dashboards
- B. What type of filters to use
- C. Performance indicators
- D. How to analyze the results from using filters
- E. Process improvement opportunities

Answer: B,C,E

NEW QUESTION # 57
What is the first step in starting an analysis in SAP Signavio Process Intelligence?

- A. Create a new process
- B. Create a new investigation
- C. Upload the event log
- D. Analyze Process Discovery Widget

Answer: B

Explanation:
In SAP Signavio Process Intelligence, the analysis process begins with setting up a structured environment to examine process data. According to the SAP Signavio Process Intelligence User Guide:
* Option C (Create a new investigation):The first step in starting an analysis is to create a new investigation, which serves as the container for all related analyses, data, and widgets. An investigation defines the scope and purpose of the analysis, such as performance evaluation or conformance checking, and is required before data can be uploaded or analyzed.
* Option A (Create a new process)is incorrect because processes are modeled in SAP Signavio Process Manager, not Process Intelligence, and analysis does not start with process creation.
* Option B (Upload the event log)is incorrect as uploading an event log is a subsequent step after creating an investigation to define the data source.
Reference:SAP Signavio Process Intelligence User Guide, section on "Starting an Investigation"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 4: Process Intelligence Analysis Workflow.

NEW QUESTION # 58
Why is it helpful to create a BPMN subset?

- A. To help users check whether diagrams adhere to certain BPMN rules
- B. To add additional information based on company requirements
- C. To focus on frequently used elements
- D. To enable changes to the default appearance of the notation

Answer: D
