CCAAK Reliable Braindumps Ppt - Passing CCAAK Score

Having a good command of professional knowledge in this line, they devised our high quality and high effective CCAAK study materials by unremitting effort and studious research. They are meritorious and unsuspecting experts with professional background. By concluding quintessential points into CCAAK Preparation engine, you can pass the exam with the least time while huge progress. And our pass rate of the CCAAK exam questions is high as 98% to 100%.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.
Topic 2	<ul style="list-style-type: none">• Apache Kafka® Fundamentals: This section of the exam measures skills of a Kafka Administrator and covers core concepts such as Kafka architecture, components, and data flow. It assesses the candidate's understanding of topics like topics and partitions, brokers, producers, consumers, and message retention.
Topic 3	<ul style="list-style-type: none">• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.

Topic 4	<ul style="list-style-type: none"> • Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.
Topic 5	<ul style="list-style-type: none"> • Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q41-Q46):

NEW QUESTION # 41

What is the relationship between topics and partitions? (Choose two.)

- A. A topic always has one partition.
- B. A partition may have more than one topic.
- C. There is no relationship between topics and partitions.
- **D. A topic may have more than one partition.**
- **E. A partition is always linked to a single topic.**

Answer: D,E

Explanation:

Kafka topics are split into one or more partitions to enable parallelism and scalability. Each partition belongs to exactly one topic; it cannot span multiple topics.

NEW QUESTION # 42

Which out-of-the-box Kafka Authorizer implementation uses ZooKeeper?

- A. LDAP
- B. RBAC
- **C. ACLs**
- D. Ranger

Answer: C

Explanation:

Kafka's built-in ACL (Access Control List) authorizer stores and manages permissions using ZooKeeper by default. This implementation controls access at the resource level (topics, consumer groups, etc.).

NEW QUESTION # 43

Which ksqlDB statement produces data that is persisted into a Kafka topic?

- **A. INSERT VALUES**
- B. SELECT (Pull Query)
- C. SELECT (Push Query)
- D. CREATE TABLE

Answer: A

Explanation:

INSERT VALUES is used to write data directly into a Kafka topic through a ksqlDB stream or table. This data is persisted.

NEW QUESTION # 44

A developer is working for a company with internal best practices that dictate that there is no single point of failure for all data

stored.

What is the best approach to make sure the developer is complying with this best practice when creating Kafka topics?

- A. Make sure the topics are created with `linger.ms=0` so data is written immediately and not held in batch.
- B. Use the parameter `--partitions=3` when creating the topic.
- C. Set `'min.insync.replicas'` to 1.
- **D. Set the topic replication factor to 3.**

Answer: D

Explanation:

Replication factor determines how many copies of each partition exist across different brokers. A replication factor of 3 ensures that even if one or two brokers fail, the data is still available, thus eliminating a single point of failure.

NEW QUESTION # 45

When a broker goes down, what will the Controller do?

- A. Automatically elect the least loaded broker to become the leader for every orphan's partitions.
- **B. Trigger a leader election among the remaining followers to distribute leadership.**
- C. Wait for a follower to take the lead.
- D. Become the leader for the topic/partition that needs a leader, pending the broker return in the cluster.

Answer: B

Explanation:

When a broker goes down, the Controller detects the failure and triggers a leader election for all partitions that had their leader on the failed broker. The leader is chosen from the in-sync replicas (ISRs) of each partition.

NEW QUESTION # 46

.....

The update for our CCAAK learning guide will be free for one year and half price concession will be offered one year later. In addition to the constantly update, we have been working hard to improve the quality of our CCAAK Preparation prep. I believe that with the help of our study materials, the exam is no longer an annoyance. Hope you can give not only our CCAAK training materials but also yourself a chance.
