ISTQB Certified Tester Usability Tester Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which of the following statements about usability test scripts is wrong?

- A. It contains pre-session interview questions.
- B. It is a checklist used by the moderator of a usability test.
- C. It contains post-session interview questions.
- D. It contains answers to the test questions.

Answer: D

Explanation:

A usability test script is a structured document used by the moderator to ensure consistency across test sessions. It typically includes pre-session briefing text, pre- and post-session interview questions, and the specific usability tasks to be performed. However, it does not include answers to the test questions, as usability tests focus on observing user behavior and performance—not testing users' knowledge. Providing answers would bias results and invalidate findings. Thus, option D is incorrect and the best choice.

NEW QUESTION # 28

What is good accessibility?

- A. Good usability of a software product by people with limited knowledge of the software
- B. Good usability regardless of disturbances like bright sunlight, noise or wind
- **C. Good usability of a software product by people with limited vision, hearing, dexterity, cognition or physical mobility**
- D. Good usability of a software product on all devices (smart phone, computer, etc.)

Answer: C

Explanation:

Accessibility refers to designing products so that people with disabilities or limitations (permanent or temporary) can use them effectively. According to the Web Content Accessibility Guidelines (WCAG) and ISO standards, accessibility focuses on ensuring that users with vision, hearing, cognitive, or mobility impairments can access digital interfaces. Option D captures this intent accurately. The other options relate to general usability or responsiveness (e.g., device adaptability or user experience in noisy environments) but do not address the inclusive nature of accessibility as defined by official guidelines.

NEW QUESTION # 29

A company distributes its products over a web shop where users can put items in their shopping cart. After they click on "checkout", the checkout process starts and users cannot go back anymore to correct possible mistakes. The only way is to hit the "back" button of the browser, which might lead to an expired session and therefore losing all items in the shopping cart.

Which of the following heuristics would best describe this usability issue?

- A. Aesthetic and minimalist design
- **B. User control and freedom**
- C. Help and documentation
- D. Visibility of system status

Answer: B

Explanation:

The described issue violates the usability heuristic "User control and freedom," as defined by Jakob Nielsen.

This principle emphasizes that users should have the ability to undo and redo actions and navigate freely without being trapped in irreversible sequences. In the scenario, users are forced into the checkout process without a clear way to return or correct mistakes, except through the unreliable and disruptive back button.

This design flaw undermines user autonomy and can result in lost progress or frustration.

#####

NEW QUESTION # 30

Usability reviews aim to identify potential usability problems based on certain criteria. Which of the following is a reasonable criterion for a usability review?

- **A. Usability standards**
- B. Functional requirements
- C. Opinion of the management
- D. Statutory Code of Practice

Answer: A

Explanation:

Usability reviews evaluate a system or interface against established usability principles or standards to identify potential issues before user testing. A recognized criterion for such reviews includes adherence to usability standards such as ISO 9241 or the Web Content Accessibility Guidelines (WCAG). These standards are derived from years of research and user-centered design principles. Options A and C do not directly relate to usability. Functional requirements (option B) refer to what the system should do, not how usable it is.

Hence, option D is correct as usability standards provide a consistent, objective basis for evaluating usability.

NEW QUESTION # 31

Which of the following statements best describe Rapid Iterative Testing and Evaluation?

- A. Testing is informal and many potential users can be accessed
- **B. Testing focuses on instant redesigns and confirming made changes**
- C. Testing happens on a regular basis, e.g. each Monday
- D. Testing is quantitative

Answer: B

Explanation:

Rapid Iterative Testing and Evaluation (RITE) is a usability method in which usability issues are identified and addressed in short cycles. Unlike traditional usability testing, RITE allows for immediate redesigns and retesting of the improved version within the same study. The goal is to refine the design quickly based on observed usability issues. Option A confuses scheduling with methodology, B is too vague, and D inaccurately characterizes RITE as quantitative, while it is typically qualitative. Therefore, C accurately reflects the purpose and approach of RITE.
