

# ISACA Realistic Practice CISM Test Online Quiz

What's more, part of that Prep4sureExam CISM dumps now are free: <https://drive.google.com/open?id=1vTN18bEqXANrR17tAYgnolxmvGRguz53>

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the CISM Study Materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our CISM study materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products. We provide free trial service before the purchase, the consultation service online after the sale, free update service and the refund service in case the clients fail in the test.

The Certified Information Security Manager (CISM) certification is a globally recognized credential for information security professionals. It is awarded by the Information Systems Audit and Control Association (ISACA), which is a non-profit organization that provides knowledge, tools, and resources to IT professionals. The CISM Certification is designed to assess and validate the knowledge and skills of individuals who manage, design, and oversee an organization's information security program.

## ISACA CISM Web-Based Practice Exam Questions

Our CISM study guide has three formats which can meet your different needs, PDF version, software version and online version. If you choose the PDF version, you can download our CISM study material and print it for studying everywhere. If a new version comes out, we will send you a new link to your E-mail box and you can download it again. With our software version of CISM Exam Material, you can practice in an environment just like the real examination. And our APP version of CISM practice guide can be available with all kinds of electronic devices.

## ISACA Certified Information Security Manager Sample Questions (Q1017-Q1022):

### NEW QUESTION # 1017

How does an incident response team BEST leverage the results of a business impact analysis (BIA)?

- A. Determining total cost of ownership (TCO)

- B. Assigning restoration priority during incidents
- C. Evaluating vendors critical to business recovery
- D. Calculating residual risk after the incident recovery phase

**Answer: B**

#### NEW QUESTION # 1018

Which of the following actions should be taken when an information security manager discovers that a hacker is foot printing the network perimeter?

- A. Reboot the border router connected to the firewall
- B. Update IDS software to the latest available version
- C. Enable server trace logging on the DMZ segment
- D. Check IDS logs and monitor for any active attacks

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

Information security should check the intrusion detection system (IDS) logs and continue to monitor the situation. It would be inappropriate to take any action beyond that. In fact, updating the IDS could create a temporary exposure until the new version can be properly tuned. Rebooting the router and enabling server trace routing would not be warranted.

#### NEW QUESTION # 1019

A hacking group has posted an organization's employee data on social media. What should the information security manager do FIRST?

- A. Inform the impacted employees.
- B. Review system audit logs.
- C. Initiate the incident response process.
- D. Notify law enforcement.

**Answer: B**

#### NEW QUESTION # 1020

The MOST useful technique for maintaining management support for the information security program is:

- A. identifying the risks and consequences of failure to comply with standards.
- B. implementing a comprehensive security awareness and training program.
- C. benchmarking the security programs of comparable organizations.
- D. informing management about the security of business operations.

**Answer: D**

Explanation:

Explanation

= According to the CISM Review Manual, one of the key success factors for an information security program is to maintain management support and commitment. This can be achieved by providing regular reports to management on the security status of the organization, the effectiveness of the security controls, and the alignment of the security program with the business objectives and strategy. By informing management about the security of business operations, the information security manager can demonstrate the value and benefits of the security program, and ensure that management is aware of the security risks and issues that need to be addressed. This technique can also help to build trust and confidence between the information security manager and the senior management, and foster a culture of security within the organization. The other options are not as effective as informing management about the security of business operations.

Implementing a comprehensive security awareness and training program is important, but it is mainly targeted at the end users and staff, not the senior management. Identifying the risks and consequences of failure to comply with standards can help to justify the need for security controls, but it can also create a negative impression of the security program as being too restrictive or punitive.
