## TDA-C01 Testking, Exam Topics TDA-C01 Pdf

Our TDA-C01 exam questions are based on the actual situation to stimulate exam circumstance in order to provide you a high-quality and high-efficiency user experience. In addition, the TDA-C01 exam guide function as a time-counter, and you can set fixed time to fulfill your task, so that promote your efficiency in real test. The key strong-point of our TDA-C01 Test Guide is that we impart more important knowledge with fewer questions and answers, with those easily understandable TDA-C01 study braindumps, you will find more interests in them and experience an easy learning process.

## Tableau Certified Data Analyst Sample Questions (Q61-Q66):

### NEW QUESTION # 61

You have a data source that contains data for every city in the United States. The following is a sample of the data.

City	State	Country	Population
Miami	Florida	United States	454,279
New York	New York	United States	8,419,000
Seattle	Washington	United States	724,305
Chicago	Illinois	United States	2,710,000

You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million. Which type of filter should you use?

- A. Top filter
- B. Condition filter

- C. General filter
- D. Wildcard filter

**Answer: B**

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New\*" or "\*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. ## NEW QUESTION # 62

You have the following dataset.

Transaction Date	Value	Day
2009-06-30	\$10	Tuesday
2009-08-10	\$20	Monday
2010-01-08	\$5	Friday

You need to generate the results in the Day field.

How should you complete the formula? (Use the dropdowns in the Answer Area to select the correct options to complete the formula.)

## NEW QUESTION # 63

You want to create the following dashboard that will contain two sheets.

Netflix movie stats			Netflix movie by Customers		
Movie Name	Movie Length		Customer Name	Movie Name	
Shrek	2.52	Kids	Brian	Aliens	3.260
Borat	2.52	Comedy	Catherine	Up	2.550
The Hangover	2.78	Comedy	Chris	Airplane!	3.240
Die Hard	2.94	Action		The Matrix	3.590
The Avengers	2.99	Action	Hector	The Silence of the Lambs	3.670
The Ring	3	Horror	Jane	Die Hard	2.940
Toy Story	3.13	Kids		The Ring	3.000
Airplane!	3.24	Comedy		Neverending Story	3.250
Neverending Story	3.25	Kids	Jeremy	Toy Story	3.130
Aliens	3.26	Action		Anchorman	3.630
The Sixth Sense	3.27	Horror	Jessica	The Sixth Sense	3.270
The Matrix	3.59	Action	John	Shrek	2.520
Anchorman	3.63	Comedy		Borat	2.520
The Silence of the Lambs	3.67	Horror	Kelly	Mothman Prophecies	3.730
Mothman Prophecies	3.73	Horror	Kristal	Up	2.550
Up	5.1	Kids	Sean	The Hangover	2.780
				The Avengers	2.990

What should you do?

- A. Add a border to both sheets and add both sheets to a horizontal object.
- B. Drag both sheets to the dashboard and add a background to each sheet.
- C. Drag both sheets to the dashboard and add a border to each sheet.
- **D. Add both sheets to a horizontal container and add a border to the container.**

**Answer: D**

#### NEW QUESTION # 64

A Data Analyst has the following dataset.

Date	Customer Name	Discount	Quantity
05/01/2020	Aaron Bergman	Yes	13
05/01/2020	Aaron J. J. J. J.	Yes	54
05/01/2020	Aaron Smayling	No	48
05/01/2020	Adam Bellavance	No	56

The analyst wants to create a parameter to dynamically filter the data to produce the following results based on quantity being above X value.

Date	Customer Name	Discount	Quantity
05/01/2020	Aaron J. J. J. J.	Yes	54
05/01/2020	Adam Bellavance	No	56

Which two types of parameters should the analyst use to produce the results? (Choose two)

- **A. Integer**
- **B. Float**
- C. Date
- D. Boolean

**Answer: A,B**

#### NEW QUESTION # 65

You want to create the following table in a view.

Segment	Position	Sales
Corporate		706,146
Home Office		429,653
Consumer	2	1,161,401

Which function should you use to create the Position column?

- A. INDKX
- B. RANK
- **C. FIRST**

- D. LAST

**Answer: C**

Explanation:

To create the Position column, you should use the FIRST () function. The FIRST () function returns the number of rows from the current row to the first row in the partition. For example, the first row in a partition will return 0, the second row will return -1, and so on. In this question, the partition is defined by the Segment field, and the table is sorted by the Sales field in descending order. Therefore, the Position column shows the offset of each row from the first row in each segment, based on the sales ranking.
