

AZ-204 Valid Exam Labs & Valid AZ-204 Exam Bootcamp

What's more, part of that PrepAwayPDF AZ-204 dumps now are free: https://drive.google.com/open?id=1zet2IWoiYk_CrG29JhbzJL17EUlq5lii

As one of the leading brand in the market, our AZ-204 exam materials can be obtained on our website within five minutes. As long as you pay for our AZ-204 study guide successfully, then you will receive it quickly. That is the expression of our efficiency. The amazing quality of our AZ-204 learning questions can totally catch eyes of exam candidates with passing rate up to 98 to 100 percent.

There is no doubt that we all dream of working for top companies around the globe. Some people make it through but some keep on thinking about how to break that glass. If you are among those who belong to the latter category, you should start the preparations for the Developing Solutions for Microsoft Azure (AZ-204) certification exam to improve your knowledge, expertise and crack even the toughest interview easily.

>> AZ-204 Valid Exam Labs <<

Precise AZ-204 Valid Exam Labs Offers you high-effective Actual Microsoft Developing Solutions for Microsoft Azure Exam Products

PrepAwayPDF not only provide the products which have high quality to each candidate, but also provides a comprehensive after-sales service. If you are using our AZ-204 products, we will let you enjoy one year of free updates. So that you can get the latest exam information in time. We will be use the greatest efficiency to service each candidate.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q366-Q371):

NEW QUESTION # 366

You need to configure Azure App Service to support the REST API requirements.
Which values should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Setting	Value
Plan	<input type="text" value="Basic"/> <ul style="list-style-type: none"> Basic Standard Premium Isolated
Instance Count	<input type="text" value="10"/> <ul style="list-style-type: none"> 1 10 20 100

Answer:

Explanation:

Setting	Value
Plan	<input type="text" value="Standard"/> <ul style="list-style-type: none"> Basic Standard Premium Isolated
Instance Count	<input type="text" value="10"/> <ul style="list-style-type: none"> 1 10 20 100

Explanation

Setting	Value
Plan	<div style="border: 1px solid black; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">Basic</div> <div style="background-color: #d3d3d3; padding: 2px;">Standard</div> <div style="padding: 2px;">Premium</div> <div style="padding: 2px;">Isolated</div> </div>
Instance Count	<div style="border: 1px solid black; padding: 2px;"> <div style="padding: 2px;">1</div> <div style="background-color: #d3d3d3; padding: 2px;">10</div> <div style="padding: 2px;">20</div> <div style="padding: 2px;">100</div> </div>

Plan: Standard
 Standard support auto-scaling
 Instance Count: 10
 Max instances for standard is 10.

Scenario:

The REST API's that support the solution must meet the following requirements:

- * Allow deployment to a testing location within Azure while not incurring additional costs.
- * Automatically scale to double capacity during peak shipping times while not causing application downtime.
- * Minimize costs when selecting an Azure payment model.

NEW QUESTION # 367

You are implementing an Azure solution that uses Azure Cosmos DB and the latest Azure Cosmos DB SDK.

You add a change feed processor to a new container instance.

You attempt to read a batch of 100 documents. The process fails when reading one of the documents. The solution must monitor the progress of the change feed processor instance on the new container as the change feed is read. You must prevent the change feed processor from retrying the entire batch when one document cannot be read.

You need to implement the change feed processor to read the documents.

Which features should you use? To answer, drag the appropriate features to the correct requirements. Each feature may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Each correct selection is worth one point.

Features	Requirement	Feature
Change feed estimator	Monitor the progress of the change feed processor.	Feature
Dead-letter queue	Prevent the change feed processor from retrying the entire batch when one document cannot be read.	Feature
Deployment unit		
Lease container		

Answer:

Explanation:

Explanation

Text, letter Description automatically generated

NEW QUESTION # 368

You are developing a microservices-based application that uses Azure Container Apps. The application consists of several containerized services that handle tasks, such as processing orders, managing inventory, and generating reports.

You must secure the container apps. All apps must reside in the same virtual network, share the same Dapr configuration, and share the same logging location.

Apps must support the configuration of the amount of memory and compute resources available to containers.

You need to configure the Azure Container App.

How should you complete the CLI command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

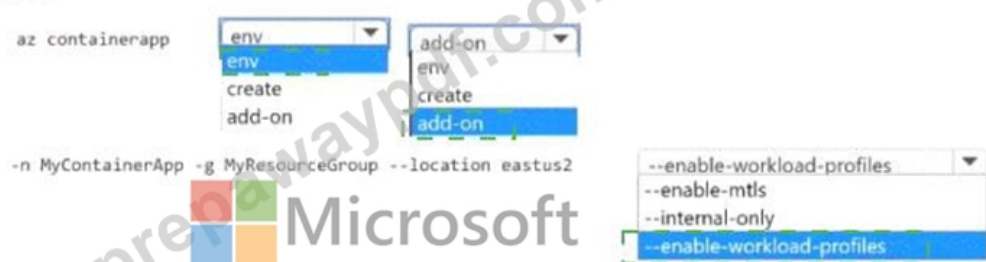

Azure Container App CLI command

Answer:

Explanation:

Azure Container App CLI command

Explanation:

NEW QUESTION # 369

You are a developer for a Software as a Service (SaaS) company. You develop solutions that provide the ability to send

notifications by using Azure Notification Hubs.

You need to create sample code that customers can use as a reference for how to send raw notifications to Windows Push Notification Services (WNS) devices. The sample code must not use external packages.

How should you complete the code segment? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Code segments

- raw
- windows
- windowsphone
- application/xml
- application/json
- application/octet-stream

Answer Area

```
var endpoint = "...";
var payload = "...";
var request = new HttpRequestMessage(HttpMethod.Post, endpoint);
request.Headers.Add("X-WNS-Type", "wns/raw");
request.Headers.Add("ServiceBusNotification-Format", "Code segment");
request.Content = new StringContent(payload, Encoding.UTF8, "Code segment");
var client = new HttpClient();
await client.SendAsync(request);
```

Answer:

Explanation:

Code segments	Answer Area
raw	<pre>var endpoint = "..."; var payload = "..."; var request = new HttpRequestMessage(HttpMethod.Post, endpoint); request.Headers.Add("X-WNS-Type", "wns/raw"); request.Headers.Add("ServiceBusNotification-Format", "windows"); request.Content = new StringContent(payload, Encoding.UTF8, "application/octet-stream"); var client = new HttpClient(); await client.SendAsync(request);</pre>
windows	
windowsphone	
application/xml	
application/json	
application/octet-stream

NEW QUESTION # 370

You have an app that stores player scores for an online game. The app stores data in Azure tables using a class named PlayerScore as the table entity. The table is populated with 100,000 records.

You are reviewing the following section of code that is intended to retrieve 20 records where the player score exceeds 15,000. (Line numbers are included for reference only.)

```

1 public void GetScore(string playerId, int score, string gameName)
2 {
3     TableQuery<DynamicTableEntity> query = new TableQuery<DynamicTableEntity>().Select(new string[] { "Score" })
4     .Where(TableQuery.GenerateFilterConditionForInt("Score", QueryComparisons.GreaterThanOrEqual, 15000)).Take
5     (20);
6     EntityResolver<KeyValuePair<string, int?>> resolver =
7     (partitionKey, rowKey, ts, props, etag) => new KeyValuePair<string, int?>(rowKey, props["Score"].Int32Value);
8     foreach (var scoreItem in scoreTable.ExecuteQuery(query, resolver, null, null))
9     {
10        Console.WriteLine($"{scoreItem.Key} {scoreItem.Value}");
11    }
12 }
13
14 public class PlayerScore : TableEntity
15 {
16     public PlayerScore(string gameId, string playerId, int score, long timePlayed)
17     {
18         PartitionKey = gameId;
19         RowKey = playerId;
20         Score = score;
21         TimePlayed = timePlayed;
22     }
23     public int Score { get; set; }
24     public long TimePlayed { get; set; }
25 }

```

You have the following code. (Line numbers are included for reference only.)

```

01 public void SaveScore(string gameId, string playerId, int score, long timePlayed)
02 {
03     CloudStorageAccount storageAccount = CloudStorageAccount.Parse(connectionString);
04     CloudTableClient tableClient = storageAccount.CreateCloudTableClient();
05     CloudTable table = tableClient.GetTableReference("ScoreTable");
06     table.CreateIfNotExists();
07     var scoreRecord = new PlayerScore(gameId, playerId, score, timePlayed);
08     TableOperation insertOperation = TableOperation.Insert(scoreRecord);
09     table.Execute(insertOperation);
10 }
11 public class PlayerScore : TableEntity
12 {
13     public PlayerScore(string gameId, string playerId, int score, long timePlayed)
14     {
15         this.PartitionKey = gameId;
16         this.RowKey = playerId;
17         Score = score;
18         TimePlayed = timePlayed;
19     }
20     public int Score { get; set; }
21     public long TimePlayed { get; set; }
22 }

```

You store customer information in an Azure Cosmos database. The following data already exists in the database:

```

01 CloudTableClient tableClient = account.CreateCloudTableClient();
02 CloudTable table = tableClient.GetTableReference("people");
03 TableQuery<CustomerEntity> query = new TableQuery<CustomerEntity>()
04     .Where(TableQuery.CombineFilters(
05         TableQuery.Generate.And, TableQuery.GenerateFilterCondition(Email, QueryComparisons.Equal, "Smith"),
06         TableOperation.And, TableQuery.GenerateFilterCondition(Email, QueryComparisons.Equal,
07             "ssmith@contoso.com")
08     ));
09 await table.ExecuteQuerySegmentedAsync<CustomerEntity>(query, null);

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

	Yes	No
The code queries the Azure table and retrieves the TimePlayed property from the table	<input type="radio"/>	<input type="radio"/>
The code will display a maximum of twenty records.	<input type="radio"/>	<input type="radio"/>
All records will be sent to the client. The client will display records for scores greater than or equal to 15,000.	<input type="radio"/>	<input type="radio"/>
The scoreItem.Key property of the KeyValuePair that ExecuteQuery returns will contain a value for PlayerID.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

	Yes	No
The code queries the Azure table and retrieves the TimePlayed property from the table	<input type="radio"/>	<input checked="" type="radio"/>
The code will display a maximum of twenty records.	<input checked="" type="radio"/>	<input type="radio"/>
All records will be sent to the client. The client will display records for scores greater than or equal to 15,000.	<input checked="" type="radio"/>	<input type="radio"/>
The scoreItem.Key property of the KeyValuePairs that ExecuteQuery returns will contain a value for PlayerID.	<input checked="" type="radio"/>	<input type="radio"/>

Box 1: No

Box 2: Yes

The TableQuery.Take method defines the upper bound for the number of entities the query returns.

Example:

query.Take(10);

Box 3: Yes

Box 4: Yes
