P.S. Free & New C1000-189 dumps are available on Google Drive shared by PracticeMaterial: [https://drive.google.com/open?id=1aqItb6VHaE3RYmy7fmoKByvRTQvgCV\\_0](https://drive.google.com/open?id=1aqItb6VHaE3RYmy7fmoKByvRTQvgCV_0)

The IBM C1000-189 exam dumps in all three formats are compatible with all devices, operating systems, and web browsers and assist you in IBM Instana Observability v1.0.277 Administrator - Professional C1000-189 exam preparation and you will be ready to crack the C1000-189 exam easily. Now you have all the necessary information that assists you in take the best decision for your professional career. The best decision is to enroll in the IBM Instana Observability v1.0.277 Administrator - Professional Exam C1000-189 Certification Exam and download the IBM C1000-189 pdf questions and practice tests and start preparing today. We are quite confident that you will pass the final IBM Instana Observability v1.0.277 Administrator - Professional C1000-189 exam easily. Best of luck with exams and your professional career!!!

We will refund your money if you fail to pass the exam after buying C1000-189 study materials. If you choose us, we will ensure you pass the exam. And we are pass guaranteed and money back guaranteed. Besides, C1000-189 study materials of us will help you pass the exam just one time. With professional experts to compile the C1000-189 Exam Dumps, they are high-quality. And we also have online and offline chat service stuff, who possess the professional knowledge about the C1000-189 study materials, and if you have any questions, just contact us, we will give you reply as quickly as possible.

**100% Pass 2026 IBM Accurate C1000-189: IBM Instana Observability v1.0.277 Administrator - Professional Guaranteed Questions Answers**

PracticeMaterial offers IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) practice exams (desktop & web-based) which are customizable. It means candidates can set time and IBM C1000-189 questions of the C1000-189 practice exam according to their learning needs. The Real C1000-189 Exam environment of practice test help test takers to get awareness about the test pressure so that they become capable to counter this pressure during the final exam.

## IBM C1000-189 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Installation: This section of the exam measures the skills of System Implementation Specialists and focuses on installing and deploying Instana across different environments. It includes installing the Instana backend, deploying and configuring agents, and migrating existing Instana setups. Candidates will also demonstrate their ability to implement Synthetic Monitoring and manage Points of Presence (PoPs) effectively for end-to-end performance validation.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Security and Compliance: This section of the exam measures the skills of IT Security Analysts and focuses on the data protection and compliance aspects of Instana deployment. Candidates must describe and implement data retention policies, plan for regulatory compliance, secure APIs, manage user access, and interpret audit logs. The goal is to ensure secure system configurations that align with organizational and regulatory standards.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Configuration: This section of the exam measures the skills of DevOps Administrators and evaluates their ability to configure and optimize Instana operational settings. It involves setting up business process monitoring, configuring both cloud and serverless agents, and defining agent proxy parameters. Candidates will learn to implement various technologies and sensors, manage OpenTelemetry integrations, set up smart alerts, create service naming rules, and define custom SLIs and payloads for alert channels. Managing licenses and ensuring proper configuration of alerts and notifications are also key components of this domain.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Planning: This section of the exam measures the skills of Cloud Monitoring Engineers and covers the foundational planning tasks required for successful Instana deployment. Candidates must understand the installation prerequisites, the architectural design of Instana for on-premises environments, and the platform core capabilities and use cases. It also assesses knowledge of different agent modes, supported sensors and tracers, and the distinctions between cloud service agents and serverless agents essential for scalable implementation.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Operations: This section of the exam measures the skills of Application Monitoring Specialists and covers daily operational tasks for managing Instana environments. It includes configuring website and application monitoring, handling synthetic monitoring, and creating incidents, issues, and alerts. Candidates will analyze infrastructure performance, set maintenance windows, and design custom dashboards. They are also expected to interpret golden signals, evaluate alerts, use analytics, and perform backup or restore operations to maintain optimal system performance.</li> </ul>

## IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q23-Q28):

### NEW QUESTION # 23

Which order of precedence applies if a user is a member of multiple groups and the level of access is not the same?

- A. Access all, Limited access, No access
- B. No access, Limited access, Access all**
- C. Access all, No access, Limited access
- D. Limited access, No access, Access all

### Answer: B

Explanation:

According to IBM Instana documentation, access rights for users belonging to multiple groups are resolved by applying the most restrictive role. The documentation states: "If a user belongs to more than one group, the permissions are set according to the order:

No access > Limited access > Access all. If there's a conflict, 'No access' always takes precedence, followed by 'Limited access,' then 'Access all.'" This ensures that users do not gain unintended permissions due to overlapping group assignments and supports the principle of least privilege. This behavior is critical for security compliance and consistent access control, especially in regulated environments or where different teams have varying visibility requirements. By enforcing the strictest restriction, Instana reduces risk from misconfigurations and accidental escalation of privilege, and helps satisfy audit trail and governance requirements in enterprise use cases.

#### NEW QUESTION # 24

Which data source on the analytics page shows traces?

- A. Infrastructure
- B. Applications
- C. Websites
- D. Logs

#### Answer: B

Explanation:

Instana's Analytics page provides a consolidated environment for users to query and visualize operational data across their stack. According to the official IBM Instana Observability documentation, traces-comprising the end-to-end journey of requests across services-are found specifically under the Applications data source. The Applications section gives interactive access to traces, requests, response times, call hierarchies, and distributed dependencies. This is possible because Instana's agent and tracers automatically instrument applications to capture and send detailed trace data. The documentation states, "The Applications analytics section allows you to interactively work with service traces and requests, providing distributed tracing visibility." This allows users to drill down, identify bottlenecks, and analyze errors at the service interaction and code execution level.

Infrastructure data source focuses on system-level metrics (CPU, memory, disk), Logs cover textual/semi-structured log output, and Websites relate to synthetic and real-user measurements-but only Applications feature distributed tracing as per the IBM Instana Observability product documentation. Thus, for incident response, root-cause analysis, and performance breakdowns, always consult the Applications data source for trace-level data.

#### NEW QUESTION # 25

Which statement best describes BeeInstana?

- A. A Kubernetes operator that requires high-performing data stores and a distributed data store cluster.
- B. An operator that can be used only on self-hosted deployments that have data stores installed
- C. It is a metric database used to perform complex metric queries
- D. An operator that can be used to install Instana on Kubernetes

#### Answer: A

Explanation:

BeeInstana is identified in Instana's documentation as the core Kubernetes operator driving distributed installation and management of Instana components. The documentation defines: "BeeInstana is a Kubernetes operator that requires robust, high-performing distributed data stores and manages Instana deployment complexity, resource allocation, and scaling within large clusters." By leveraging Kubernetes-native constructs, BeeInstana orchestrates Instana backend, UI, sensors, and streaming components-ensuring reliable, scalable deployments for enterprise settings. The operator orchestrates failover, recovery, and persistent storage management, supporting self-hosted and hybrid installations. While it is associated with metric data handling, its main role is orchestration and operational management based on distributed database infrastructures. Simple operator installation (A, D) does not capture its full role, and describing BeeInstana as only a metric database (B) misrepresents its architectural function in Instana's platform lifecycle.

#### NEW QUESTION # 26

What is Instana's custom built software that is designed to monitor a specified technology?

- A. Sensor
- B. Service
- C. Tracer

- D. Profiling

**Answer: A**

Explanation:

Instana uses Sensors as specialized software components embedded within its agents to monitor and extract telemetry from various supported technologies. The verified documentation states: "Sensors are built-in modules that detect, identify, and monitor specific technologies such as databases, servers, run-times, and messaging systems." These components ensure that the agent collects targeted metrics, events, and traces optimized for individual stacks like MySQL, Kafka, or Java. When deployed, the Instana agent automatically discovers technologies running in the environment and loads corresponding Sensors dynamically, requiring minimal user configuration. Tracers handle transaction propagation, Profiling covers code-level performance, and Service is a higher abstraction in application topology-not individual monitoring logic. The Sensor concept remains core to Instana's automatic discovery and observability architecture as validated in IBM's architectural reference sections.

**NEW QUESTION # 27**

Which statement accurately describes the use of the agent key?

- A. It is required only for downloading the license.
- B. It is not included in the purchase email and must be obtained separately.
- **C. It is used for both downloading Instana artifacts and deploying an instance.**
- D. It is used only for deploying an instance.

**Answer: C**

Explanation:

The IBM Instana Observability product architecture uses a security credential called an agent key for authentication and authorization in both installation and deployment operations. The documentation explicitly affirms: "The agent key must be used for downloading Instana installation artifacts from IBM repositories as well as for deploying agents to connect to the backend." This binding ensures entitlement enforcement and integrity of data transfer. The key, distributed through official IBM entitlement channels or purchase confirmation emails, validates the customer's licensed environment. During deployment, the same key is included in configuration files or environment variables so that each agent securely authenticates to its assigned backend instance. This unified mechanism simplifies lifecycle management while maintaining strong license controls. The key is never generated manually nor limited to licensing download alone-its dual purpose makes it critical in both provisioning and operations stages.

**NEW QUESTION # 28**

.....

In the process of using the IBM Instana Observability v1.0.277 Administrator - Professional study question, if the user has some problems, the IT professor will 24 hours online to help users solve, the user can send email or contact us on the online platform. Of course, a lot of problems such as soft test engine appeared some faults or abnormal starting run phenomenon of our C1000-189 exam question, these problems cannot be addressed by simple language, we will service a secure remote assistance for users and help users immediately effectively solve the existing problems of our C1000-189 Torrent prep, thus greatly enhance the user experience, beneficial to protect the user's learning resources and use digital tools, let users in a safe and healthy environment to study C1000-189 exam question.
