

New RCA Test Bootcamp - RCA Examcollection Free Dumps

P.S. Free & New RCA dumps are available on Google Drive shared by DumpsTests: <https://drive.google.com/open?id=1mBzWkB7fNXAfUdnu4C0ZPV2i8soYLnF>

It is important to solve more things in limited times, RCA Exam have a high quality, Five-star after sale service for our Relativity RCA exam dump, the Relativity Certified Administrator prepare torrent has many professionals, and they monitor the use of the user environment and the safety of the learning platform timely.

Relativity RCA Exam Syllabus Topics:

Section	Objectives
Workspace Administration	- Permissions and security - Workspace configuration
Productions & Outputs	- Productions setup - Export and reporting
Analytics & Review Management	- Structured analytics - Review workflows
Case Administration	- User and group management - Case setup and management
Data Management & Ingestion	- File upload and import workflows - Data loading

RCA Examcollection Free Dumps | New RCA Dumps Sheet

Are you still satisfied with your present job? Do you still have the ability to deal with your job well? Do you think whether you have the competitive advantage when you are compared with people working in the same field? If your answer is no, you are a right place now. Because our RCA Exam Torrent will be your good partner and you will have the chance to change your work which you

are not satisfied with, and can enhance your ability by our RCA guide questions, you will pass the exam and achieve your target.

Relativity Certified Administrator Sample Questions (Q54-Q59):

NEW QUESTION # 54

When should you run OCR on a production?

- A. After a document is redacted.
- B. Before a production is exported.
- C. Before a production is run.
- D. After a production is exported.

Answer: D

NEW QUESTION # 55

How is a Relativity Short Message Format RSMF file created?

- A. By using the mass operation on the document list to convert a conversation into RSMF.
- B. By using the processing profile option to automatically convert XML from a messaging platform into RSMF.
- C. Relativity creates it on-the-fly for all non-document data.
- D. Files must be generated using the RSMF specifications before they are imported into Relativity.

Answer: D

Explanation:

The correct answer is C. Files must be generated using the RSMF specifications before they are imported into Relativity. Relativity's official Short Message Format documentation explains that to use the Short Message Viewer, you first need to create an RSMF file, and the example/specification pages describe the required structure and header information that must be present before ingestion using Processing. Relativity also states that Processing is the recommended method of importing RSMF files into Relativity, which means the RSMF file already exists when Processing begins.

This rules out the other options. Relativity does not say that it automatically creates RSMF on-the-fly for all non-document data. It also does not describe a processing-profile feature that converts arbitrary XML from chat platforms into RSMF during import. Nor is there a document-list mass operation that converts conversations into RSMF. Instead, RSMF is a defined external format that must be constructed according to Relativity's published specifications, then imported and processed to preserve message metadata, attachments, and near-native review behavior. Therefore, the correct answer is C.

NEW QUESTION # 56

When exporting a saved search using Import/Export, how can you maintain the hierarchy of multiple-choice lists?

- A. Sort the saved search on the Multiple Choice field.
- B. There is not a way to maintain the information.
- C. Export as CSV only so Excel recognizes the order.
- D. Check the box to export multiple-choice fields as nested.

Answer: D

Explanation:

The correct answer is D. Check the box to export multiple-choice fields as nested. Relativity's official export documentation states that Export Multiple Choice Fields as Nested is the option used to maintain the hierarchy of Relativity multiple-choice lists during export. It further explains that the nested value delimiter is a backslash, which preserves the parent-child structure of those choices in the exported data.

This means the hierarchy is not lost by default if the appropriate export option is selected, so option A is incorrect. Sorting on the field does not preserve the nested hierarchy, making option B wrong. Exporting as CSV for Excel recognition is also not the documented mechanism, so option C is incorrect. From an RCA and data loading standpoint, this setting matters because exported hierarchical values often need to be re-used downstream, re-imported, or validated in a way that preserves their original structure. Without the nested export option, the relationship between parent and child values may not be represented correctly. Therefore, the proper way to maintain multiple-choice hierarchy when exporting a saved search through Import/Export is to check the box to export multiple-choice fields as nested .

NEW QUESTION # 57

How should data be promoted to a review workspace to take advantage of the reduced data costs offered by the repository workspace?

- A. Uninstall the repository application when culling is done.
- B. Export data out to a load file and import into a review workspace with Import/Export.
- C. ARM the repository case out and restore it as a review workspace.
- D. Use Integration Points with the Links Only option for natives.

Answer: D

Explanation:

The correct answer is C. Use Integration Points with the Links Only option for natives. Relativity's repository workspace documentation explicitly says that to take advantage of reduced repository data costs, they strongly recommend promoting sets of documents via links only to standard review workspaces instead of storing duplicates of the files in the review workspace. The repository workflow page describes using Integration Points to move selected documents to the review workspace, and the billing guidance explains that if you promote actual files instead of links only, you incur both repository and review storage charges. That makes option C the documented best practice. Uninstalling the repository application is actually listed as a condition that can affect repository billing adversely, so option A is incorrect. Exporting and re-importing with Import/Export duplicates the files and defeats the reduced-cost repository workflow. ARM restore is also not the recommended method for promoting data into active review while preserving the repository cost advantages. Therefore, the correct answer is use Integration Points with Links Only for natives.

NEW QUESTION # 58

A reviewer cannot find a specific document using dtSearch. Why might this be?

- A. The document's parent email is in a secured folder that the reviewer's group does not have access to.
- B. An incremental build of the dtSearch index is in progress.
- C. The document is in a Review Center queue the reviewer's group is not assigned to.
- D. The fields returned by the Searchable Set saved search are all empty for this document.

Answer: D

Explanation:

The correct answer is C. The fields returned by the Searchable Set saved search are all empty for this document. Relativity documents that dtSearch indexes are built against a Searchable Set, and administrators must manually update those indexes when the underlying document search sets change. Relativity also describes dtSearch as indexing the content made available through the configured search/index setup rather than magically finding text that is not present in the indexed fields. If the document is part of the saved search but the fields being indexed for that document are empty, there is effectively no searchable text for dtSearch to return for that record.

Option B is not the best answer because an incremental build is a maintenance activity for adding new documents, not the documented reason a single already-known document cannot be found. Relativity notes that incremental builds look for new documents in the searchable set and do not re-index previously indexed records with changed content, which is a different issue. Option D is unrelated because Review Center queue assignment does not control whether a document is searchable through a dtSearch index. Option A is also not the best explanation for this question; dtSearch availability is driven by index/searchable-set configuration and accessible indexed text, not by parent-email folder access in the way the option suggests. So the best RCA-aligned answer is that the document has no indexed searchable content in the fields returned by the searchable set.

NEW QUESTION # 59

.....

Are you still worried about the exam? Don't worry! Our RCA exam torrent can help you overcome this stumbling block during your working or learning process. Under the instruction of our RCA test prep, you are able to finish your task in a very short time and pass the exam without mistakes to obtain the RCA certificate. We will tailor services to different individuals and help them take part in their aimed exams after only 20-30 hours practice and training. Moreover, we have experts to update RCA quiz torrent in terms of theories and contents on a daily basis.
