The Digital Discovery Assessment (DDA) is part of the early discovery and scoping process for SAP S/4HANA Cloud projects. It captures the customer's business priorities, scope, and key requirements to support solution design and project planning.

A). Known integration requirements

The assessment records any known or expected integration requirements, helping identify connections to other systems or external applications early in the project.

B). Business role requirements

It also captures business role requirements to define which roles and user responsibilities are needed to support the processes included in the solution scope.

Other options:

\* C. SAP Fiori application extensions: These are identified later in the design phase, not during DDA.

\* D. Target customer go-live date: This may be noted in project planning but is not part of the formal DDA deliverables.

正解: A、B、E

解説:

Step 1 - Understanding the question

This question refers to the SAP Fiori Apps Reference Library, which is the official tool provided by SAP to explore all Fiori applications available for SAP S/4HANA.

It includes detailed information such as functional scope, technical components, installation requirements, and related app recommendations.

Step 2 - Evaluate each option

Option A: Related app-specific solution design guidelines

This is correct.

The Fiori Apps Reference Library provides design guidelines and best practices for specific Fiori apps, including navigation patterns and user experience notes.

Option B: Shortcut to the Maintenance Planner tool to establish the technical update path This is incorrect.

The library does not provide direct access to the Maintenance Planner tool. Maintenance Planner is accessed through SAP Support Portal, not the Fiori Apps Library.

Option C: Installation and configuration requirements for selected apps

This is correct.

Each app entry provides installation, configuration, and authorization requirements, including business catalogs, roles, and software components.

Option D: Shortcut to the Quicksizer tool to estimate hardware requirements This is incorrect.

The Quicksizer tool is separate and used for system sizing; it is not part of the Fiori Apps Reference Library.
