SC-900 Exam Format & Reliable SC-900 Braindumps

If you come to our website to choose SC-900 study materials, you will enjoy humanized service. Firstly, we have chat windows to wipe out your doubts about our SC-900 study materials. You can ask any question about our study materials. All of our online workers are going through special training. They are familiar with all details of our SC-900 Study Materials. Also, you have easy access to our free demo. Once you apply for our free trials of the study materials, our system will quickly send it via email.

Microsoft Security, Compliance, and Identity Fundamentals Sample Questions (Q55-Q60):

NEW QUESTION # 55

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

☐

NEW QUESTION # 56

Which pillar of identity relates to tracking the resources accessed by a user?

- A. auditing

- B. authentication
- C. administration
- D. authorization

Answer: A

Explanation:

Microsoft's identity model highlights four pillars: administration, authentication, authorization, and auditing.

In this model, auditing is the capability that records and reports identity-related activities, providing visibility into "who accessed what, when, from where, and how." SCI-aligned guidance explains that authentication verifies identity and authorization grants permissions, while auditing tracks and logs the resulting access to resources so organizations can investigate activity, satisfy compliance obligations, and detect anomalies.

Microsoft services such as Microsoft Entra ID (sign-in logs and audit logs), Access Reviews, Privileged Identity Management (PIM) reports, and Microsoft Purview Audit are explicitly positioned to capture user access events and administrative changes across cloud apps and services. This evidence enables security operations and compliance teams to monitor access patterns, prove regulatory adherence, and respond to incidents. Therefore, when the question focuses on tracking the resources accessed by a user, the pillar that directly addresses this requirement is auditing, not authentication (identity proof), authorization (permission assignment), or administration (lifecycle and configuration).

NEW QUESTION # 57

Select the answer that correctly completes the sentence.

☐

Answer:

Explanation:

☐

NEW QUESTION # 58

Match the Azure networking service to the appropriate description.

To answer, drag the appropriate service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

☐

Answer:

Explanation:

☐

NEW QUESTION # 59

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

Explanation

Yes

NO

NO

YES - As an administrator, you can lock a subscription, resource group, or resource to prevent other users in your organization from accidentally deleting or modifying critical resources. The lock overrides any permissions the user might have.

NO - The most restrictive lock in the inheritance takes precedence.

NO - If you delete a resource group with a locked resource, the portal UI will give you an error and no resources are deleted.
