## Free PDF High-quality Microsoft - AZ-120 - Planning and Administering Microsoft Azure for SAP Workloads Exam Tutorials

Customizable Planning and Administering Microsoft Azure for SAP Workloads (AZ-120) practice tests (desktop and web-based) of ValidExam are made to ensure excellent practice of applicants. Users can take multiple AZ-120 practice exams. And the previous exam progress can be saved, so candidates can track it easily whenever they want to see the mistakes. The exam is tough to pass, and that's why AZ-120 provides our customers with all the best Microsoft AZ-120 exam dumps to pass the exam on the first try.

## Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q34-Q39):

### NEW QUESTION # 34

You have a highly available deployment of SAP NetWeaver on Azure virtual machines. The database tier is hosted on two virtual

machines that run Windows Server 2019 and have Microsoft SQL Server 2017 installed.  
The NetWeaver, application, and database tiers each reside on a separate subnet within the same virtual network.  
You run ABAPMeter against the deployment and discover that the average value of Act DB is 2 ms.  
You need to lower the Acc DB value.  
What should you do?

- A. Move the application virtual machines to the same subnet as the SQL Server virtual machines.
- B. Increase the tempdb size on the SQL Server virtual machines.
- **C. Redeploy the NetWeaver, application, and SQL Server virtual machines to the same proximity placement group.**
- D. Configure the SQL Server database to use asynchronous replication.

**Answer: C**

#### NEW QUESTION # 35

You plan to deploy a highly available ASCS instance to SUSE Linux Enterprise Server (SLES) virtual machines in Azure.  
You are configuring an internal Azure Standard Load Balancer for the ASCS instance.  
How should you configure the internal Standard Load Balancer? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

☐

Explanation

Session persistence: None.

Floating IP: Enabled.

References:

<https://docs.microsoft.com/en-us/azure/virtual-machines/workloads/sap/high-availability-guide-suse>

#### NEW QUESTION # 36

You have an on-premises SAP HANA deployment.  
You plan to migrate the deployment to Azure virtual machines. The migrated deployment will use Azure Premium Storage V1 SSD for the volume that will host /hana/data and Azure ultra disks for the volume that will host /hana/logs.  
You need to recommend the cache configuration for each volume.  
What should you recommend for each volume? To answer, select the appropriate options in the answer area.  
NOTE Each correct selection is worth one point.

**Answer:**

Explanation:

☐

Explanation:

☐

#### NEW QUESTION # 37

You have an on-premises SAP AnyDB deployment hosted on an operating system that is NOT supported in Azure.  
You need to migrate the deployment to Azure by performing a replatform and migration to SAP HANA. The solution must meet the following requirements:  
\* Minimize administrative effort.  
\* Minimize downtime.  
What should you use?

- **A. SAP Software Update Manager**
- B. Azure Migrate
- C. Azure Database Migration Service
- D. SAP Software Provisioning Manager

**Answer: A**

### NEW QUESTION # 38

Once the migrate completes, to which size should you set the ExpressRoute circuit to the New York office to meet the business goals and technical requirements?

- A. 2,000 Mbps
- B. 1,000 Mbps
- C. 500 Mbps
- D. 5,000 Mbps

**Answer: A**

Explanation:

ExpressRoute circuits are configured to allow you to burst up to two times the bandwidth limit you procured for no additional cost.

Scenario: It is estimated that during the migration, the bandwidth required between Azure and the New York office will be 1 Gbps. After the migration, a traffic burst of up to 3 Gbps will occur.

Topic 2, Litware, inc

SAP Environment

Litware currently runs the following SAP products:

- \* Enhancement Pack 6 for SAP ERP Central Component 6.0 (SAP ECC 6.0)
- \* SAP Extended Warehouse Management (SAP EWM)
- \* SAP Business Warehouse (SAP BW)
- \* SAP NetWeaver Process Integration (PI)
- \* SAP Solution Manager

All users run on the Windows Server platform. All databases use Microsoft SQL Server. Currently, you have 20 production servers.

You have 30 non-production servers including five testing servers, five development servers, five quality assurance (QA) servers, and 15 pre-production servers.

Currently, all SAP applications are in the litware.com domain.

Problem Statements

The current version of SAP ECC has a transaction that, when run in batches overnight, takes eight hours to complete. You confirm that upgrading to SAP Business Suite on HANA will improve performance because of code changes and the SAP HANA database platform.

Litware is dissatisfied with the performance of its current hosted infrastructure vendor. Litware experienced several hardware failures and the vendor struggled to adequately support its 24/7 business operation.

Business Goals

Litware identifies the following business goals:

- \* Increase the performance of SAP ECC application by moving to SAP HANA. All other databases will remain on SQL Server.
- \* Move away from the current infrastructure vendor to increase the stability and availability of the SAP services.
- \* Use the new Environment, Health and Safety (EH&S) in Recipe Management function.
- \* Ensure that any migration activities can be completed within a 48-hour period during a weekend.

Planned Changes

Litware identifies the following planned changes:

- \* Migrate SAP to Azure.
- \* Upgrade and migrate SAP ECC to SAP Business Suite on HANA Enhancement Pack 8.

Technical Requirements

Litware identifies the following technical requirements:

- \* Implement automated backups.
- \* Support load testing during the migration.
- \* Identify opportunities to reduce costs during the migration.
- \* Continue to use the litware.com domain for all SAP landscapes.
- \* Ensure that all SAP applications and databases are highly available.
- \* Remove all SAP components from the on-premises network once the migration is complete.
- \* Minimize the purchase of additional SAP licenses. SAP HANA licenses were already purchased.
- \* Ensure that SAP can provide technical support for all the SAP landscapes deployed to Azure.

### NEW QUESTION # 39

.....

ValidExam beckons exam candidates around the world with our attractive characters. Our experts made significant contribution to their excellence. So we can say bluntly that our AZ-120 simulating exam is the best. Our effort in building the content of our AZ-120 study materials lead to the development of learning guide and strengthen their perfection. To add up your interests and simplify some difficult points, our experts try their best to design our AZ-120 Study Material and help you understand the AZ-120 learning guide better.
