It will make them scrutinize how our formats work and what we offer them, for example, the form and pattern of CompTIA SY0-701 exam dumps, and their relevant and updated answers. It is convenient for our consumers to check CompTIA SY0-701 Exam Questions free of charge before purchasing the CompTIA SY0-701 practice exam.

CompTIA SY0-701 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• General Security Concepts: This topic covers various types of security controls, fundamental security concepts, the importance of change management processes in security, and the significance of using suitable cryptographic solutions.
Topic 2	<ul style="list-style-type: none">• Security Operations: This topic delves into applying common security techniques to computing resources, addressing security implications of proper hardware, software, and data asset management, managing vulnerabilities effectively, and explaining security alerting and monitoring concepts. It also discusses enhancing enterprise capabilities for security, implementing identity and access management, and utilizing automation and orchestration for secure operations.

Topic 3	<ul style="list-style-type: none"> • Security Architecture: Here, you'll learn about security implications across different architecture models, applying security principles to secure enterprise infrastructure in scenarios, and comparing data protection concepts and strategies. The topic also delves into the importance of resilience and recovery in security architecture.
Topic 4	<ul style="list-style-type: none"> • Security Program Management and Oversight: Finally, this topic discusses elements of effective security governance, the risk management process, third-party risk assessment, and management processes. Additionally, the topic focuses on security compliance requirements, types and purposes of audits and assessments, and implementing security awareness practices in various scenarios.
Topic 5	<ul style="list-style-type: none"> • Threats, Vulnerabilities, and Mitigations: In this topic, you'll find discussions comparing threat actors and motivations, explaining common threat vectors and attack surfaces, and outlining different types of vulnerabilities. Moreover, the topic focuses on analyzing indicators of malicious activity in scenarios and exploring mitigation techniques used to secure enterprises against threats.

Reliable SY0-701 Learning Materials & Latest SY0-701 Study Plan

Pass the CompTIA Security+ Certification Exam SY0-701 certification exam which is a challenging task. To make SY0-701 exam success journey simple, quick, and smart, you have to prepare well and show a firm commitment to passing this exam. The real, updated, and error-free CompTIA Security+ Certification Exam SY0-701 Exam Dumps are available over the GuideTorrent.

CompTIA Security+ Certification Exam Sample Questions (Q242-Q247):

NEW QUESTION # 242

An accountant is transferring information to a bank over FTP. Which of the following mitigations should the accountant use to protect the confidentiality of the data?

- A. Encryption
- B. Obfuscation
- C. Tokenization
- D. Data masking

Answer: A

NEW QUESTION # 243

Which of the following activities is used to determine the reason an incident occurred, prior to closing the incident?

- A. Lessons learned
- B. Root cause analysis
- C. E-discovery
- D. Detection

Answer: B

Explanation:

Root cause analysis is the process of identifying the fundamental reason an incident occurred, ensuring that underlying issues are addressed before the incident is closed.

NEW QUESTION # 244

An organization has issues with deleted network share data and improper permissions. Which solution helps track and remediate these?

- A. ACL

- B. DLP
- C. FIM
- D. EDR

Answer: C

Explanation:

File Integrity Monitoring (FIM) detects unauthorized changes to files, including deletions, modifications, and permission alterations. When protecting shared data, FIM creates baseline hashes of files and monitors them for unexpected changes. Any deviation triggers alerts, enabling rapid investigation and remediation.

Security+ SY0-701 identifies FIM as a crucial tool for:

- * Integrity monitoring
- * Detecting unauthorized file deletion
- * Identifying malicious or accidental permission changes
- * Supporting compliance (PCI-DSS, HIPAA, etc.)

DLP (A) protects against data leakage but does not detect permission misconfiguration or deleted files. EDR (B) monitors endpoint activity but is not optimized for shared file integrity. ACL (D) defines permissions but does not track changes.

Thus, C (FIM) is the correct solution.

NEW QUESTION # 245

An organization needs to monitor its users' activities to prevent insider threats. Which of the following solutions would help the organization achieve this goal?

- A. Behavioral analytics
- B. Network intrusion detection system
- C. Identity and access management
- D. Access control lists

Answer: A

Explanation:

Behavioral analytics tools monitor user actions and detect anomalies that may indicate insider threats, such as unauthorized access or unusual data exfiltration activities. These tools establish baselines for normal behavior and flag deviations.

NEW QUESTION # 246

An enterprise is trying to limit outbound DNS traffic originating from its internal network. Outbound DNS requests will only be allowed from one device with the IP address 10.50.10.25. Which of the following firewall ACLs will accomplish this goal?

- A. Access list outbound permit 10.50.10.25/32 0.0.0.0/0 port 53
Access list outbound deny 0.0.0.0/0 0.0.0.0/0 port 53
- B. Access list outbound permit 0.0.0.0/0 0.0.0.0/0 port 53
Access list outbound deny 10.50.10.25/32 0.0.0.0/0 port 53
- C. Access list outbound permit 0.0.0.0/0 10.50.10.25/32 port 53
Access list outbound deny 0.0.0.0/0 0.0.0.0/0 port 53
- D. Access list outbound permit 0.0.0.0/0 0.0.0.0/0 port 53
Access list outbound deny 0.0.0.0/0 10.50.10.25/32 port 53

Answer: A

Explanation:

A firewall ACL (access control list) is a set of rules that determines which traffic is allowed or denied by the firewall. The rules are processed in order, from top to bottom, until a match is found. The syntax of a firewall ACL rule is:

Access list <direction> <action> <source address> <destination address> <protocol> <port> To limit outbound DNS traffic originating from the internal network, the firewall ACL should allow only the device with the IP address 10.50.10.25 to send DNS requests to any destination on port 53, and deny all other outbound traffic on port 53. The correct firewall ACL is:

Access list outbound permit 10.50.10.25/32 0.0.0.0/0 port 53 Access list outbound deny 0.0.0.0/0 0.0.0.0/0 port 53 The first rule permits outbound traffic from the source address 10.50.10.25/32 (a single host) to any destination address (0.0.0.0/0) on port 53 (DNS). The second rule denies all other outbound traffic on port 532.

NEW QUESTION # 247
