問題 #12

What are two use cases for configuring a FortiSOAR HA cluster?
(Choose two.)

- A. Multi-tenancy
- B. Data externalization
- C. Disaster recovery
- D. Scaling

答案: C,D

問題 #13

When configuring an HA cluster with an externalized PostgreSQL database, which two files on the database server need to be configured to trust all FortiSOAR nodes' incoming connections? (Choose two.)

- A. db_external_config.yml
- B. pg_hba.conf
- C. db_config.yml
- D. postgresql.conf

答案: B,D

解題說明:

In a FortiSOAR High Availability (HA) cluster setup with an externalized PostgreSQL database, it is necessary to configure the database server to allow incoming connections from all FortiSOAR nodes. This configuration involves modifying the pg_hba.conf file to set up host-based authentication and control which IP addresses can connect. The postgresql.conf file must also be adjusted to enable listening on all necessary IP addresses, which is critical for FortiSOAR nodes to connect to the database server securely and reliably. Together, these configurations ensure that all FortiSOAR nodes can access the database, facilitating effective HA functionality.

問題 #14

View the exhibit:

What does the command output mean?

```
root@fortisoar ~]# csadm db --check-connection
The file db_external_config.yml does not exist. Failed to connect the instance.
[root@fortisoar ~]#
```

- A. There is no connectivity between the PostgreSQL databases of the primary and secondary FortiSOAR instances.
- B. The local PostgreSQL database is disabled on the FortiSOAR instance.
- **C. The configuration to enable database externalization has not been completed.**
- D. The local PostgreSQL database is configured on the FortiSOAR instance.

答案： C

問題 #15

An administrator is issuing the following command on a node trying to join a FortiSOAR cluster as a standby: `csadm ha join-cluster -status active -role secondary --primary-node 10.0.1.160` The node fails to join the cluster. What is the issue?

- **A. The status value should be passive.**
- B. The primary node needs to be resolvable via FQDN.
- C. The IP address should be for secondary-node Instead of primary-node.
- D. The role value should be worker.

答案： A

解題說明：

When joining a FortiSOAR cluster as a standby node, the correct status value should be passive. Using active would imply that the node is trying to join as an active node, which could cause conflicts in the cluster setup. In FortiSOAR, standby nodes must be set as passive to ensure they are recognized correctly and to avoid conflicts with the primary node or other active nodes within the cluster. Therefore, setting the status to passive will resolve the issue and allow the node to join the cluster as intended.

問題 #16

Which two system monitoring reports are available on the System Monitoring widget?
(Choose two.)

- **A. CPU Usage**
- B. RAM Usage
- C. Playbook Health Status
- **D. Service Status**

答案： A,D
