Topic 4	• Understand ChromeOS tenets: It discusses ChromeOS best practices and customers on chromeOS tenets.
Topic 5	• Identity Management: The primary focus of the topic identity management is on identity features.

Google Professional ChromeOS Administrator Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68
A global organization is deploying a fleet of ChromeOS devices to all their users. Organization policy requires all web traffic to be filtered using an existing proxy service to prevent access to 1 million unauthorized websites. What ChromeOS policy should you configure to meet this requirement?

- A. "Always use the proxy specified below", and provide the URL to pac file configuration
- B. "Always use a network access control deny" policy to deny the URLs
- C. "Always use the proxy auto-config specified below", and provide the IP port information
- D. "Always use the proxy specified below", and provide the IP port to the proxy services

Answer: A

Explanation:
To ensure that all web traffic is filtered according to organizational policy, configure the ChromeOS devices to
"Always use the proxy specified below" and provide the URL to the PAC (Proxy Auto-Config) file. The PAC file contains logic to determine which proxy server to use for specific URLs, allowing dynamic and flexible proxy configurations.
Verified Answer from Official Source:
The correct answer is verified from the Google ChromeOS Proxy Configuration Guide, which outlines using a PAC file to configure web filtering for large-scale deployments.
"Use the 'Always use the proxy specified below' setting and specify the URL to the PAC file to enforce consistent web filtering across all ChromeOS devices." PAC files are commonly used to direct traffic through specific proxies based on URL patterns, which is ideal for managing large lists of restricted websites efficiently.
Objectives:
* Configure ChromeOS devices to use web proxies.
* Enforce consistent web filtering through proxy settings.

NEW QUESTION # 69
As an administrator, you would like the ability to see and test upcoming changes to the Google Admin console. How would an admin get access to pre-release features and upcoming ChromeOS device management changes to the Admin console?

- A. Create a ChromeQS Developer Account
- B. Enroll in the ChromeOS Factory Software Platform
- C. Register for the Chrome Enterprise Trusted Tester Program
- D. Join the Chrome Enterprise BETA Testing

Answer: C

Explanation:
The Chrome Enterprise Trusted Tester Program is designed for administrators who want early access to pre-release features and changes in the Google Admin console, including those related to ChromeOS device management. By joining this program, administrators can:
* Test New Features: Get hands-on experience with upcoming features and changes before they are officially released.
* Provide Feedback: Share feedback directly with Google's product teams, helping to shape the development and prioritization of new functionalities.

* Stay Ahead: Be among the first to know about new capabilities and improvements in the Google Admin console.
How to Register:
* Visit the Chrome Enterprise Trusted Tester Program
website: https://inthecloud.withgoogle.com/trusted-testers/sign-up.html
* Fill out the registration form with your organization's details.
* Google will review your application and, if approved, provide you with access to pre-release features.

NEW QUESTION # 70

The finance team for an organization buys a new printer to print sensitive documents without using the main office printer. How should you automatically configure the printer for finance team users?

- A. Deploy correct drivers to the finance devices
- B. Deploy the printer via Groups
- C. Add the printer directly to the user
- D. Plug the new printer directly into the router

Answer: B

Explanation:
To configure the printer specifically for finance team users, the most efficient approach is to deploy the printer via Groups. By assigning the printer to a Google Group that contains finance team members, the printer will automatically be available to all users in that group without manual configuration for each device.
Verified Answer from Official Source:
The correct answer is verified from the Google Admin Console Printing Configuration Guide, which recommends using Groups to deploy printers for specific user sets.
"Deploy printers to user groups to ensure that only specified users have access. Use the Groups feature to manage printer availability efficiently." Using Groups for printer deployment ensures that only authorized users (in this case, finance team members) can print sensitive documents, maintaining security and ease of access.
Objectives:
* Secure printer access for specific user groups.
* Simplify printer configuration for departments.

NEW QUESTION # 71

What should an administrator do to view the number and type of ChromeOS upgrades purchased and in use by their domain?

- A. Check reports page for upgrades
- B. Contact partner to verify
- C. Verify upgrades on devices page
- D. Check subscriptions in billing

Answer: D

Explanation:
To view the number and type of ChromeOS upgrades purchased and in use, administrators should check the
"Subscriptions" section in the billing area of the Google Admin console. This section provides a clear overview of the organization's ChromeOS upgrade subscriptions and usage.
Other options are incorrect because they don't directly provide information about ChromeOS upgrade subscriptions:
* Option A (Verify upgrades on devices page):Shows upgrades on individual devices, not the overall purchase and usage.
* Option C (Contact partner to verify):Unnecessary if the information is readily available in the Admin console.
* Option D (Check reports page for upgrades):Might provide some usage data, but not the purchase details.

NEW QUESTION # 72

An organization was recently hacked through an admin's choice of an operating system. Leadership decides to move to Chromebooks for their security.

While the organization waits for Chromebooks to be delivered, what will allow them to continue using their existing devices securely?

- A. ChromeOS Managed Browser
- B. ChromeOS Readiness Guide
- C. ChromeOS Bytes
- D. ChromeOS Flex

Answer: D

Explanation:
ChromeOS Flex allows the organization to repurpose existing devices by installing a lightweight version of ChromeOS on them. This provides a secure and familiar environment while they await the delivery of new Chromebooks. Here's why it's the best choice:
* Security: ChromeOS Flex inherits the security features of ChromeOS, such as sandboxing, verified boot, and automatic updates, mitigating the risks associated with the previous operating system.
* Quick Deployment: ChromeOS Flex can be easily installed on existing hardware using a USB drive, minimizing downtime and allowing employees to continue working.
* Familiar Interface: The user interface of ChromeOS Flex is similar to ChromeOS, ensuring a smooth transition for employees.
Option A is incorrect because the ChromeOS Readiness Guide is a resource for planning migration, not an immediate security solution.
Option B is incorrect because while ChromeOS Managed Browser enhances security within a browser, it doesn't address vulnerabilities in the underlying operating system.
Option C is incorrect because ChromeOS Bytes is a blog, not a software solution.
