

Salesforce Mule-101 New Real Exam | Mule-101 Pdf Demo Download

Don't let the Salesforce Certified MuleSoft Integration Foundations (Mule-101) certification exam stress you out! Prepare with our Salesforce Mule-101 exam dumps and boost your confidence in the Salesforce Mule-101 exam. We guarantee your road toward success by helping you prepare for the Mule-101 Certification Exam. Use the best Salesforce Mule-101 practice questions to pass your Salesforce Mule-101 exam with flying colors!

Once you enter into our interface, nothing will disturb your learning the Mule-101 training engine except the questions and answers. So all your attention will be concentrated on study. At the same time, each process is easy for you to understand. There will have small buttons on the Mule-101 Exam simulation to help you switch between the different pages. It does not matter whether you can operate the computers well. Our Mule-101 training engine will never make you confused.

Free PDF Mule-101 New Real Exam & The Best Methods to help you pass Salesforce Mule-101

Our website gives detailed guidance to our customers for preparation of Mule-101 actual test and take them towards the direction of achievement. Each of our Salesforce exam preparation materials is designed by IT professionals in order to improve your particular skills. Our Mule-101 Practice Questions will boost the confidence of candidates for appearing in the real exam.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q43-Q48):

NEW QUESTION # 43

An organization is choosing between API-led connectivity and other integration approaches.

- A. Improved security through adoption of monolithic architectures
- **B. Increased developer productivity through self-service of API assets**
- C. Higher outcome repeatability through centralized development
- D. Greater project predictability through tight coupling of systems

Answer: B

Explanation:

The Value Proposition: A primary goal of API-led connectivity is to close the IT delivery gap. It achieves this by turning APIs into reusable Assets published to Exchange. 8 Self-Service: When assets are discoverable, other developers (e.g., Line of Business developers) can reuse them without waiting for central IT to build everything from scratch. This "Self-Service" model significantly increases overall developer productivity.

Why others are incorrect:

Tight Coupling (B): API-led promotes loose coupling. Tight coupling makes systems brittle and hard to change (Point-to-Point).

Centralized Development (C): Creates a bottleneck. API-led enables federated development.

Monolithic (D): API-led breaks monoliths into composable services (Microservices/APIs).

NEW QUESTION # 44

As part of a growth strategy, a supplier signs a trading agreement with a large customer. The customer sends purchase orders to the supplier according to the ANSI X12 EDI standard, and the supplier creates the orders in its ERP system using the information in the EDI document.

- **A. Sharing data with external partners**
- **B. Synchronized data transfer**
- C. Data mashups
- D. User interface integration
- E. Streaming data ingestion

Answer: A,B

Explanation:

Context: This scenario describes a classic B2B (Business-to-Business) integration.

Sharing data with external partners (Option C): EDI (Electronic Data Interchange) is the global standard for exchanging business documents (like Purchase Orders) between different organizations (Trading Partners). This fits the "External Partners" criteria perfectly.

Synchronized data transfer (Option B): The requirement is to take data from the incoming source (EDI file) and map/move it into a target system (ERP) to create an order. This process of moving data from System A to System B to keep them consistent is defined as synchronized data transfer.

NEW QUESTION # 45

Which component of Anypoint Platform belongs to the platform control plane?

- A. Anypoint Connectors
- **B. API Manager**
- C. Runtime Fabric
- D. Runtime Replica

Answer: B

Explanation:

Control Plane vs. Runtime Plane:

Control Plane: The set of components that manage, monitor, and design APIs and applications. This includes API Manager, Runtime Manager (the console), Anypoint Exchange, and Design Center.

Runtime Plane: The infrastructure where the applications actually run (execute). This includes the Mule Runtime engine, Runtime Fabric, and CloudHub workers.

API Manager: It sits in the Control Plane and pushes policies (governance) down to the runtime engines (gateways).

NEW QUESTION # 46

According to the Internet Engineering Task Force (IETF), which supporting protocol does File Transfer Protocol (FTP) use for reliable communication?

- A. Hypertext Transfer Protocol (HTTP)
- **B. Transmission Control Protocol (TCP)**
- C. Lightweight Directory Access Protocol (LDAP)
- D. Secure Sockets Layer (SSL)

Answer: B

Explanation:

TCP (Transmission Control Protocol): FTP is an application-layer protocol that relies on TCP at the transport layer to ensure reliable, ordered, and error-checked delivery of a stream of bytes¹².

Mechanism: FTP establishes two TCP connections: one for control (commands) and one for data transfer.

Why others are incorrect:

UDP: Is unreliable (best effort).

HTTP: Is an alternative application protocol, not the transport layer for FTP.

LDAP: Is for directories.

NEW QUESTION # 47

An integration architect is designing an API that must accept requests from API clients for both XML and JSON content over HTTP/1.1 by default.

- A. SOAP
- B. gRPC
- **C. REST**
- D. GraphQL

Answer: C

Explanation:

REST (Representational State Transfer): REST is an architectural style that allows resources to be represented in multiple formats (Media Types)⁵⁵⁵⁵.

Versatility: Unlike SOAP (which is strictly XML), a RESTful API can easily support both JSON and XML representations of the same resource, often determined by the Accept or Content-Type headers.

Why others are incorrect:

SOAP: Strictly uses XML.

GraphQL: Typically uses JSON for both queries and responses.

gRPC: Uses Protocol Buffers (binary), not human-readable JSON/XML by default.

NEW QUESTION # 48

.....

Our evaluation system for Mule-101 test material is smart and very powerful. First of all, our researchers have made great efforts to ensure that the data scoring system of our Mule-101 test questions can stand the test of practicality. Once you have completed your study tasks and submitted your training results, the evaluation system will begin to quickly and accurately perform statistical assessments of your marks on the Mule-101 Exam Torrent so that you can arrange the learning tasks properly and focus on the targeted learning tasks with Mule-101 test questions.
