## Salesforce Plat-Dev-301考題寶典 - Plat-Dev-301考古題

PDFExamDumps能為你提供一個可靠而全面的關於通過Salesforce Plat-Dev-301 認證考試的方案。我們的方案是可以100%保證你通過考試的，並且還為你提供一年的免費更新服務。現在你還可以嘗試在PDFExamDumps的網站上免費下載我們您提供的Salesforce Plat-Dev-301 認證考試的測試軟體和部分練習題和答案來。

### 最新的 Salesforce Developer Plat-Dev-301 免費考試真題 (Q164-Q169):

#### 問題 #164

A company notices that their unit tests in a test class with many methods to create many records for prerequisite reference data are slow.

What can a developer do to address the issue?

- A. Move the prerequisite reference data setup to a TestDataFactory and call that from each test method.
- **B. Move the prerequisite reference data setup to a @testSetup method in the test class.**
- C. Move the prerequisite reference data setup to the constructor for the test class.
- D. Turn off triggers, flows, and validations when running tests.

答案： B

解題說明：

@testSetup method improves test performance. It allows data sharing across test methods within a class, reducing redundant data creation.

#### 問題 #165

Universal Containers wants to notify an external system, in the event that an unhandled exception occurs, by publishing a custom event using Apex.

What is the appropriate publish/subscribe logic to meet this requirement?

- A. Publish the error event using the addError () method and write a trigger to subscribe to the event and notify the external system
- B. Have the external system subscribe to the event channel. No publishing is necessary.
- C. Publish the error event using the addError () method and have the external system subscribe to the event using Comet
- **D. Publish the error event using the EventBus.publish() method and have the external system subscribe to the event using CometD.**

答案： D

解題說明：

When an unhandled exception occurs, publishing a custom platform event using EventBus.publish() method is the appropriate way. The external system can then subscribe to this event using technologies like CometD to receive notifications. Publish and Subscribe to Platform Events

#### 問題 #166

How should a developer verify that a specific Account record is being tested in a test class for a Visualforce controller?

- A. Instantiate the page reference in the test class, insert the Account in the test class, then use system.setParentRecordId().get() to set the Account ID,
- B. Insert the Account into Salesforce, instantiate the page reference in the test class, then use system.setParentRecordId().get() to set the Account ID. {of Instantiate the page reference in the test class, insert the Account in the test class, then use =seeAllData=true to view the Account.
- **C. Insert the Account in the test class, instantiate the page reference in the test class, then use System.currentPageReference().getParameters().put() to set the Account ID.**

答案： C

解題說明：

To test a Visualforce controller that works with specific records, you should insert the necessary test data in the test class. Then instantiate a PageReference for the Visualforce page, set the record id in the page parameters, and use System.currentPageReference().getParameters().put('id', recordId) to simulate navigating to the page with that record.

#### 問題 #167

A company has reference data stored in multiple custom metadata records that represent default information and delete behavior for certain geographic regions.

When a contact is inserted, the default information should be set on the contact from the custom metadata records based on the contact's address information.

Additionally, if a user attempts to delete a contact that belongs to a flagged region, the user must get an error message.

Depending on company personnel resources, what are two ways to automate this?

Choose 2 answers

- **A. Apex trigger**
- B. Apex invocable method
- **C. Flow Builder**
- D. Remote action

答案： A,C

解題說明：

To automate the process based on the contact's address information and prevent deletion from flagged regions:

Flow Builder: Can be used to set default information on records when they are created.

Apex Trigger: Allows for complex logic to be executed before or after data manipulation operations, including insert and delete. It can be used to enforce rules such as preventing deletion.

Flow Builder: Salesforce Help Article

Apex Triggers: Apex Developer Guide

#### 問題 #168

A developer gets an error saying 'Maximum Trigger Depth Exceeded.'

What is a possible reason to get this error message?

- A. The SOQL governor limits are being hit.
- **B. A trigger is recursively invoked more than 16 times.**
- C. A flow trigger was included too many times.
- D. There are numerous DML operations in the trigger logic.

答案： B

解題說明：

The "Maximum Trigger Depth Exceeded" error message is typically caused by a trigger being recursively invoked too many times. Salesforce has a limit on the depth of trigger recursion to prevent infinite loops, which is 16 times.

問題 #169

.....

沒有人願意自己的人生平平淡淡，永遠在自己的小職位守著那份杯水車薪，等待著被裁員或者待崗或是讓時間悄無聲息的流逝而被退休。這樣的生活是在太沒有滋味了，難道你不想讓你的生活變得多滋多彩嗎？不要緊。今天我告訴你一個成功的捷徑，就是通過Salesforce的Plat-Dev-301考試認證，有了這個認證，你就可以過著過著高級白領的生活了，成為一個實力派的IT專業人士，得到別人的敬重。而我們PDFExamDumps將為你提供Salesforce的Plat-Dev-301考試認證培訓資料，可以讓你毫不費力的實現這個美夢，你還在猶豫嗎？不要猶豫了，趕緊將PDFExamDumps Salesforce的Plat-Dev-301考試認證培訓資料加入購物車吧。
