## SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q46-Q51):

### NEW QUESTION # 46

What is a purpose of SAP Datasphere in the context of SAP Business Data Cloud?

- A. To provide analytic models for intelligent applications
- B. To define a data product
- C. To install an intelligent application
- D. To maintain the system landscape for SAP Business Data Cloud

**Answer: A**

Explanation:

In the context of SAP Business Data Cloud (BDC), SAP Datasphere plays a pivotal role primarily to provide analytic models for intelligent applications. SAP Datasphere acts as the unified data fabric and central data layer within the BDC architecture. It is where data from various sources is integrated, harmonized, and semantically enriched. The analytical models, which are the foundation for reporting, dashboards, and machine learning initiatives within intelligent applications, are built and managed within SAP Datasphere. These models transform raw, integrated data into business-ready information, providing the necessary structure and context for consumption by SAP Analytics Cloud and other intelligent applications. While data products are defined using artifacts within Datasphere, and the overall system landscape is maintained through the BDC Cockpit, the core purpose of Datasphere in this ecosystem is its capability to deliver robust, high-quality analytical models to drive business insights for intelligent applications.

### NEW QUESTION # 47

How many characters are comments limited to in SAP Analytics Cloud?

Please choose the correct answer.

Response:

- A. 0
- B. 1
- C. 10,000
- D. 2

**Answer: C**

### NEW QUESTION # 48

Which data modeling component is used to define relationships between business entities?

Please choose the correct answer.

Response:

- **A. Association**
- B. Semantic Join
- C. Data Flow
- D. Data Access Control

**Answer: A**

#### NEW QUESTION # 49

Which automatically created dimension type can you delete from an SAP Analytics Cloud analytic data model?

- **A. Generic**
- B. Date
- C. Version
- D. Organization

**Answer: A**

Explanation:

In an SAP Analytics Cloud (SAC) analytic data model, you typically have a degree of flexibility in managing dimensions. Among the automatically created dimension types, the Generic dimension can often be deleted if it's not relevant or desired for your analysis. Generic dimensions are often generated by the system based on identified data patterns but might not always align with specific business requirements or be redundant. In contrast, Date, Version, and Organization dimensions are fundamental and often system-critical, especially for planning models (Version, Organization) or time-based analysis (Date). These core dimensions are usually not freely deletable or are required by the system for specific functionalities. Therefore, for tailoring your analytic model to specific business needs, the ability to remove generic dimensions provides greater control and simplification.
