

2026 Authoritative Data-Cloud-Consultant Latest Test Pdf | 100% Free Test Salesforce Certified Data Cloud Consultant Question

What's more, part of that TopExamCollection Data-Cloud-Consultant dumps now are free: <https://drive.google.com/open?id=1mM65lpz28Lu6Wit--VloeaL1v1hVaTRo>

The TopExamCollection is one of the top-rated and renowned platforms that has been offering real and valid Salesforce Certified Data Cloud Consultant (Data-Cloud-Consultant) exam practice test questions for many years. During this long time period countless Salesforce Certified Data Cloud Consultant (Data-Cloud-Consultant) exam candidates have passed their dream Data-Cloud-Consultant certification and they are now certified Salesforce professionals and pursuing a rewarding career in the market.

Salesforce Data-Cloud-Consultant Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Ingestion and Modeling: This topic covers the different transformation capabilities within Data Cloud. It includes describing processes and considerations for data ingestion from various sources, defining, mapping, and modeling data using best practices aligned with identity resolution. Lastly, it discusses using available tools to inspect and validate ingested and modeled data.
Topic 2	<ul style="list-style-type: none">• Identity Resolution: It describes matching and how its rule sets are applied. Furthermore, it discusses reconciling data and its rule sets, the results of identity resolution, and use cases.
Topic 3	<ul style="list-style-type: none">• Act on Data: This topic defines activations and their basic use cases, using attributes and related attributes, identifying and analyzing timing dependencies affecting the Data Cloud lifecycle. Additionally it focuses on troubleshooting common problems with activations, and using data actions, including their requirements and intended use cases.
Topic 4	<ul style="list-style-type: none">• Data Cloud Setup and Administration: This topic includes applying Data Cloud permissions, permission sets, org-wide settings. It describes and configures data stream types, and data bundles. Moreover, it discusses use cases for data spaces, creating data spaces, managing and administering Data Cloud using reports, dashboards, flows, packaging, data kits, diagnosing and exploring data using Data Explorer, Profile Explorer, and APIs.
Topic 5	<ul style="list-style-type: none">• Data Cloud Overview: This topic covers Data Cloud's function, key terminology, business value, typical use cases, the Data Cloud lifecycle, dependencies, and principles of data ethics. These sub-topics provide an overview of Data Cloud's capabilities and applications.

Test Data-Cloud-Consultant Question - Exam Sample Data-Cloud-Consultant Online

For some candidates who are caring about the protection of the privacy, our Data-Cloud-Consultant exam materials will be your best choice. We respect the personal information of our customers. If you buy Data-Cloud-Consultant exam materials from us, we can ensure you that your personal information, such as the name and email address will be protected well. Once the order finishes, your personal information will be concealed. In addition, we are pass guarantee and money back guarantee. If you fail to pass the exam after buying Data-Cloud-Consultant Exam Dumps from us, we will refund your money.

Salesforce Certified Data Cloud Consultant Sample Questions (Q92-Q97):

NEW QUESTION # 92

A Data Cloud consultant recently added a new data source and mapped some of the data to a new custom data model object (DMO) that they want to use for creating segments. However, they cannot view the newly created DMO when trying to create a new segment.

What is the cause of this issue?

- A. Data has not yet been ingested into the DMO.
- B. The new DMO is not of category Profile.
- C. Segmentation is only supported for the Individual and Unified Individual DMOs.
- D. The new DMO does not have a relationship to the individual DMO

Answer: B

Explanation:

The cause of this issue is that the new custom data model object (DMO) is not of category Profile. A category is a property of a DMO that defines its purpose and functionality in Data Cloud. There are three categories of DMOs: Profile, Event, and Other. Profile DMOs are used to store attributes of individuals or entities, such as name, email, address, etc. Event DMOs are used to store actions or interactions of individuals or entities, such as purchases, clicks, visits, etc. Other DMOs are used to store any other type of data that does not fit into the Profile or Event categories, such as products, locations, categories, etc. Only Profile DMOs can be used for creating segments in Data Cloud, as segments are based on the attributes of individuals or entities. Therefore, if the new custom DMO is not of category Profile, it will not appear in the segmentation canvas. The other options are not correct because they are not the cause of this issue. Data ingestion is not a prerequisite for creating segments, as segments can be created based on the data model schema without actual data. The new DMO does not need to have a relationship to the individual DMO, as segments can be created based on any Profile DMO, regardless of its relationship to other DMOs. Segmentation is not only supported for the Individual and Unified Individual DMOs, as segments can be created based on any Profile DMO, including custom ones. Reference: Create a Custom Data Model Object from an Existing Data Model Object, Create a Segment in Data Cloud, Data Model Object Category

NEW QUESTION # 93

How does Data Cloud handle an individual's Right to be Forgotten?

- A. Deletes the specified Individual and records from any data source object mapped to the Individual data model object.
- B. Deletes the specified Individual and records from any data model object/data lake object related to the Individual.
- C. Deletes the specified Individual record and its Unified Individual Link record.
- D. Deletes the records from all data source objects, and any downstream data model objects are updated at the next scheduled ingestion

Answer: B

Explanation:

Explanation

Data Cloud handles an individual's Right to be Forgotten by deleting the specified Individual and records from any data model object/data lake object related to the Individual. This means that Data Cloud removes all the data associated with the individual from the data space, including the data from the source objects, the unified individual profile, and any related objects. Data Cloud also deletes the Unified Individual Link record that links the individual to the source records. Data Cloud uses the Consent API to

process the Right to be Forgotten requests, which are reprocessed at 30, 60, and 90 days to ensure a full deletion. The other options are not correct descriptions of how Data Cloud handles an individual's Right to be Forgotten. Data Cloud does not delete the records from all data source objects, as this would affect the data integrity and availability of the source systems. Data Cloud also does not delete only the specified Individual record and its Unified Individual Link record, as this would leave the source records and the related records intact. Data Cloud also does not delete only the specified Individual and records from any data source object mapped to the Individual data model object, as this would leave the related records intact.

NEW QUESTION # 94

Which information is provided in a .csv file when activating to Amazon S3?

- A. The metadata regarding the segment definition
- B. The manifest of origin sources within Data Cloud
- C. An audit log showing the user who activated the segment and when it was activated
- D. The activated data payload

Answer: D

Explanation:

When activating to Amazon S3, the information that is provided in a .csv file is the activated data payload. The activated data payload is the data that is sent from Data Cloud to the activation target, which in this case is an Amazon S3 bucket1. The activated data payload contains the attributes and values of the individuals or entities that are included in the segment that is being activated2. The activated data payload can be used for various purposes, such as marketing, sales, service, or analytics3. The other options are incorrect because they are not provided in a .csv file when activating to Amazon S3. Option A is incorrect because an audit log is not provided in a .csv file, but it can be viewed in the Data Cloud UI under the Activation History tab4. Option C is incorrect because the metadata regarding the segment definition is not provided in a .csv file, but it can be viewed in the Data Cloud UI under the Segmentation tab5. Option D is incorrect because the manifest of origin sources within Data Cloud is not provided in a .csv file, but it can be viewed in the Data Cloud UI under the Data Sources tab. NEW QUESTION # 95

A consultant has an activation that is set to publish every 12 hours, but has discovered that updates to the data prior to activation are delayed by up to 24 hours.

Which two areas should a consultant review to troubleshoot this issue?

Choose 2 answers

- A. Review calculated insights to make sure they're run before segments are refreshed.
- B. Review calculated insights to make sure they're run after the segments are refreshed.
- C. Review segments to ensure they're refreshed after the data is ingested.
- D. Review data transformations to ensure they're run after calculated insights.

Answer: A,C

Explanation:

The correct answer is B and C because calculated insights and segments are both dependent on the data ingestion process. Calculated insights are derived from the data model objects and segments are subsets of data model objects that meet certain criteria. Therefore, both of them need to be updated after the data is ingested to reflect the latest changes. Data transformations are optional steps that can be applied to the data streams before they are mapped to the data model objects, so they are not relevant to the issue. Reviewing calculated insights to make sure they're run after the segments are refreshed (option D) is also incorrect because calculated insights are independent of segments and do not need to be refreshed after them. NEW QUESTION # 96

Which information is provided in a .csv file when activating to Amazon S3?

- A. The metadata regarding the segment definition
- B. The manifest of origin sources within Data Cloud
- C. An audit log showing the user who activated the segment and when it was activated
- D. The activated data payload

Answer: D

Explanation:

When activating to Amazon S3, the information that is provided in a .csv file is the activated data payload. The activated data payload is the data that is sent from Data Cloud to the activation target, which in this case is an Amazon S3 bucket1. The activated data payload contains the attributes and values of the individuals or entities that are included in the segment that is being activated2. The activated data payload can be used for various purposes, such as marketing, sales, service, or analytics3. The other options are incorrect because they are not provided in a .csv file when activating to Amazon S3. Option A is incorrect because an audit log is not provided in a .csv file, but it can be viewed in the Data Cloud UI under the Activation History tab4. Option C is incorrect because the metadata regarding the segment definition is not provided in a .csv file, but it can be viewed in the Data Cloud UI under the Segmentation tab5. Option D is incorrect because the manifest of origin sources within Data Cloud is not provided in a .csv file, but it can be viewed in the Data Cloud UI under the Data Sources tab.
