As the saying goes, practice makes perfect. We are now engaged in the pursuit of Craftsman spirit in all walks of life. Professional and mature talents are needed in each field, similarly, only high-quality and high-precision Adobe Commerce Developer Expert qualification question can enable learners to be confident to take the qualification examination so that they can get the certificate successfully, and our AD0-E725 Learning Materials are such high-quality learning materials, it can meet the user to learn the most popular test site knowledge. Because our experts have extracted the frequent annual test centers are summarized to provide users with reference.

Adobe Commerce Developer Expert Sample Questions (Q46-Q51):

NEW QUESTION # 46

A Developer needs to set up a message queue topic in Adobe Commerce to asynchronously handle order processing. Which XML file should the Developer use to configure this?

- A. queue_consumer.xml
- B. queue_topology.xml
- **C. communication.xml**

Answer: C

Explanation:

The communication.xml file is used to define message queue topics and link publishers with subscribers. This is required when setting up asynchronous handling for events such as order processing.

B (queue_topology.xml): Defines queue and exchange structure.

C (queue_consumer.xml): Defines consumers for queues but does not declare topics.

A is correct: communication.xml is the right file for defining topics.

Reference:

Adobe Commerce DevDocs - communication.xml reference

In Adobe Commerce's Message Queue Framework (MQF), several XML configuration files are used, each with a specific purpose:

communication.xml # Defines message queue topics and the messages they carry.

Topics represent logical channels that connect publishers and consumers.

Example: An order placement event may publish a message to a topic like order.processing.

queue_topology.xml # Defines the relationship between topics and queues.

Maps a topic to one or more queues.

Specifies routing and exchange bindings.

queue_consumer.xml # Defines consumers that process messages from queues.

Each consumer is a PHP class responsible for handling a message pulled from a queue.

Since the question specifically asks about setting up a topic (not the routing or consumer), the correct configuration file is communication.xml.

Official Documentation Extracts:

"The communication.xml file defines the messages and topics in the message queue framework."- Adobe Commerce DevDocs:

Message queues configuration

"Use queue_topology.xml to bind topics to queues and define exchanges."- Message Queues: Topology configuration
"Consumers are defined in queue_consumer.xml. A consumer listens to a queue and processes incoming messages."- Message Queues: Consumer configuration

NEW QUESTION # 47

An Adobe Commerce Expert is tasked with implementing a custom condition on salable quantity with reservations. The condition needs to be applicable only when added to cart.

Which option should the Developer implement?

- A.

```
<type name="Magento\InventoryApi\Model\Stock\ValidatorChain">
  <arguments>
    <argument name="validators" xsi:type="array">
      <item name="is_salable_with_reservations" xsi:type="object"
        >Vendor\InventorySales\Model\Stock\Validator\IsSalableWithReservationsValidator</item>
    </argument>
  </arguments>
</type>
```
- B.

```
<preference for="
Magento\InventorySales\Model\MSProductSalableForRequestedQtyCondition\IsSalableWithReservationsC type="
Vendor\InventorySales\Model\MSProductSalableForRequestedQtyCondition\IsSalableWithReservationsCo
/>
```
- C.

```
<virtualType name="IsProductSalableForRequestedQtyConditionChainOnAddToCart">
  <arguments>
    <argument name="conditions" xsi:type="array">
      <item name="is_salable_with_reservations" xsi:type="array">
        <item name="object" xsi:type="object"
          >Vendor\InventorySales\Model\MSProductSalableForRequestedQtyCondition\IsSalableWithReservationsC
        </item>
      </item>
    </argument>
  </arguments>
</virtualType>
```

Answer: C

Explanation:

To add a custom salable quantity condition for use only during the add-to-cart flow, developers must extend the IsProductSalableForRequestedQtyConditionChainOnAddToCart virtual type. This chain is designed specifically for cart validation, ensuring the new condition runs only at that stage.

A would override the core class completely, not scoped to add-to-cart.

B relates to stock validator chains, not salable quantity conditions.

C is correct: defining a virtual type extension ensures proper conditional logic for reservations during cart validation.

Reference:

Adobe Commerce DevDocs - MSI salable quantity conditions

NEW QUESTION # 48

A Developer needs to replicate a recent issue that occurred in the staging environment so it can be tested locally. The Developer decides to dump the staging database and import it into the local setup.

Which command should the Developer use to do this?

- A. vendor/bin/ece-tools db-snapshot
- B. vendor/bin/ece-tools db-dump
- C. magento-cloud snapshot:db-dump

Answer: B

Explanation:

The correct way to dump a database from an Adobe Commerce Cloud environment is with the vendor/bin/ece- tools db-dump command.

A (db-snapshot) is not a valid ece-tools command.

B is incorrect: magento-cloud snapshot commands are for managing whole environment snapshots, not direct DB dumps.

C is correct: ece-tools db-dump provides the database export for staging/local replication.

Reference:

Adobe Commerce Cloud DevDocs - ece-tools db-dump

NEW QUESTION # 49

A Developer discovers the following code snippet in default.xml layout:

```
<referenceBlock name="content">
<block name="custom" template="example.phtml" cacheable="false" />
</referenceBlock>
```

Which caching behavior will occur?

- A. All pages will be marked as non-cacheable.
- B. Only the custom block will not be cached.
- C. The content block and all its child blocks will become cacheable.

Answer: A

NEW QUESTION # 50

A customer asks for a new functionality which will allow them to see the total lifetime sales statistic of a product. This new data is to be made available for the API and traditional product exports. The technical architect of the company servicing the client decides that for this to be achieved, the first step is for an Extension Attribute to be created.

What are the next two steps that need to be taken? (Choose two.)

- A. Implement an after plugin on the Product Repository.
- B. Declare the extension attribute in etc/extension_attributes.xml.
- C. Implement an around plugin on the Product Repository.
- D. Declare the extension attribute in etc/webapi_rest/extension_attributes.xml.

Answer: B,D

NEW QUESTION # 51

.....
