Fortinet FCSS_EFW_AD-7.6 Accurate Answers, Valid FCSS_EFW_AD-7.6 Exam Review

BONUS!!! Download part of TestPassKing FCSS_EFW_AD-7.6 dumps for free: https://drive.google.com/open?id=1dvacMqe2JUVk3l9SGqIv0mATRINeSAWh

The Fortinet FCSS_EFW_AD-7.6 Certification is one of the most valuable certificates in the modern Fortinet world. This FCSS - Enterprise Firewall 7.6 Administrator (FCSS_EFW_AD-7.6) certification exam is designed to validate a candidate's skills and knowledge level. With this FCSS_EFW_AD-7.6 exam everyone whether he is a beginner or seasoned professional can not only validate their expertise but also get solid proof of their skills and knowledge. By doing this you can gain several personal and professional benefits.

Fortinet FCSS_EFW_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	• Routing: This section of the exam measures the skills of a Network Infrastructure Engineer and covers the implementation of dynamic routing protocols for enterprise network traffic management. It includes configuring both OSPF and BGP routing protocols to ensure efficient and reliable data transmission across complex organizational networks.
Topic 2	• VPN: This section of the exam measures the skills of a VPN Solutions Engineer and covers the implementation of various virtual private network technologies. It includes configuring IPsec VPN using IKE version 2 protocols and implementing Automatic Discovery VPN solutions to establish on-demand secure tunnels between multiple sites within an enterprise network infrastructure.
Topic 3	• Central Management: This section of the exam measures the skills of a Security Operations Manager and covers the implementation of centralized management systems for coordinated control and oversight of distributed Fortinet security infrastructures across enterprise environments.
Topic 4	• System Configuration: This section of the exam measures the skills of a Network Security Architect and covers the implementation and integration of core Fortinet infrastructure components. It includes deploying the Security Fabric, enabling hardware acceleration, configuring high availability operational modes, and designing enterprise networks utilizing VLANs and VDOM technologies to meet specific organizational requirements.

| Topic 5	• Security Profiles: This section of the exam measures the skills of a Threat Prevention Specialist and covers the configuration and management of comprehensive security profiling systems. It includes implementing SSL • SSH inspection, combining web filtering and application control mechanisms, integrating intrusion prevention systems, and utilizing the Internet Service Database to create layered security protections for organizational networks.

Top Fortinet FCSS_EFW_AD-7.6 Accurate Answers & Authoritative TestPassKing - Leading Offer in Qualification Exams

Dear everyone, are you still confused about the FCSS_EFW_AD-7.6 exam test. Do you still worry about where to find the best valid Fortinet FCSS_EFW_AD-7.6 exam cram? Please do not search with aimless. TestPassKing will drag you out from the difficulties. All the questions are edited based on lots of the data analysis by our IT experts, so the authority and validity of Fortinet FCSS_EFW_AD-7.6 Practice Test are without any doubt. Besides, FCSS_EFW_AD-7.6 training dumps cover almost the key points, which can ensure you pass the actual test with ease. Dear, do not hesitate anymore. Choose our TestPassKing Fortinet exam training test, you can must success.

Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q54-Q59):

NEW QUESTION # 54
Refer to the exhibit, which shows a network diagram.
An administrator would like to modify the MED value advertised from FortiGate_1 to a BGP neighbor in the autonomous system 30.
What must the administrator configure on FortiGate_1 to implement this?

- A. prefix-list-out
- B. route-map-out
- C. network-import-check
- D. distribute-list-out

Answer: B

Explanation:
The Multi-Exit Discriminator (MED) is a BGP attribute used to influence the preferred path for incoming traffic from an external autonomous system (AS). The diagram shows that FortiGate_1 advertises MED 200, while FortiGate_2 advertises MED 300, meaning the ISP will prefer the route through FortiGate_1 because a lower MED is preferred in BGP.
To modify the MED value on FortiGate_1 for routes advertised to AS 30, the administrator must configure a route-map-out. A route map can match specific routes and set the MED value before sending them to the BGP neighbor.

NEW QUESTION # 55
Refer to the exhibit, which shows an ADVPN network

An administrator must configure an ADVPN using IBGP and EBGP to connect overlay network 1 with 2.
What two options must the administrator configure in BGP? (Choose two.)

- A. set ibgp-enforce-multihop advpn
- B. set ebgp-enforce-multrhop enable
- C. set attribute-unchanged next-hop
- D. set next-hop-self enable

Answer: B,D

Explanation:
In this ADVPN (Auto-Discovery VPN) network, there are two hubs (Hub A and Hub B) connected via EBGP, while IBGP is used within each overlay. To ensure proper BGP routing between the overlays, the administrator must configure specific BGP options..
set ebgp-enforce-multihop enable
By default, EBGP requires directly connected neighbors. Since Hub A and Hub B are not directly connected but reach each other over an IPsec tunnel, multihop must be enabled for EBGP sessions to work.
set next-hop-self enable
In IBGP, the next-hop attribute does not change by default. When an IBGP route is advertised from a spoke to another hub or spoke, the next-hop needs to be updated to ensure proper reachability. Enabling next-hop-self forces the BGP speaker to advertise itself as the next-hop, ensuring that all spokes properly reach routes across the overlays.

NEW QUESTION # 56
An administrator is setting up an ADVPN configuration and wants to ensure that peer IDs are not exposed during VPN establishment.
Which protocol can the administrator use to enhance security?

- A. Choose IKEv1 aggressive mode because it simplifies peer identification.
- B. Opt for SSL VPN web mode because it does not use peer IDs at all.
- C. Stick with IKEv1 main mode because it offers better performance.
- D. Use IKEv2, which encrypts peer IDs and prevents exposure.

Answer: D

Explanation:
In ADVPN (Auto-Discovery VPN) configurations, security concerns include protecting peer IDs during VPN establishment. Peer IDs are exchanged in the IKE (Internet Key Exchange) negotiation phase, and their exposure could lead to privacy risks or targeted attacks.
# IKEv2 encrypts peer IDs, making it more secure compared to IKEv1, where peer IDs can be exposed in plaintext in aggressive mode.

IKEv2 also provides better performance and flexibility while supporting dynamic tunnel establishment in ADVPN.

NEW QUESTION # 57
Refer to the exhibit.
A pre-run CLI template that is used in zero-touch provisioning (ZTP) and low-touch provisioning (LTP) with FortiManager is shown.
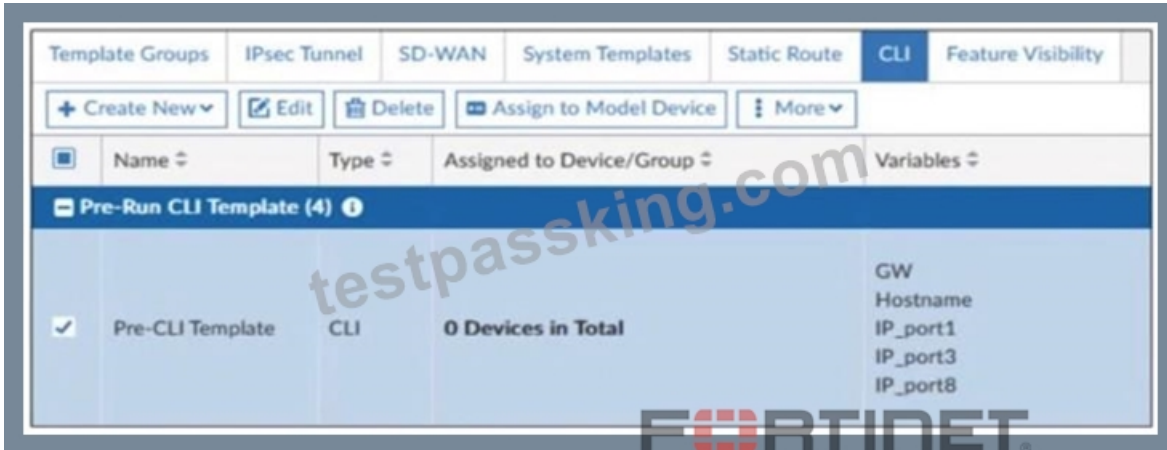

The template is not assigned even though the configuration has already been installed on FortiGate.
What is true about this scenario?

- A. The administrator did not assign the template correctly when adding the model device because pre-CLI templates remain permanently assigned to the firewall
- B. Pre-run CLI templates are automatically unassigned after their initial installation
- C. The administrator must use post-run CLI templates that are designed for ZTP and LTP
- D. Pre-run CLI templates for ZTP and LTP must be unassigned manually after the first installation to avoid conflicting error objects when importing a policy package

Answer: B

Explanation:
In FortiManager, pre-run CLI templates are used in Zero-Touch Provisioning (ZTP) and Low-Touch Provisioning (LTP) to configure a FortiGate device before it is fully managed by FortiManager.
These templates apply configurations when a device is initially provisioned. Once the pre-run CLI template is executed, FortiManager automatically unassigns it from the device because it is not meant to persist like other policy configurations. This prevents conflicts and ensures that the FortiGate configuration is not repeatedly applied after the initial setup.

NEW QUESTION # 58
Refer to the exhibit, which shows a partial enterprise network.

An administrator would like the area 0.0.0.0 to detect the external network.
What must the administrator configure?

- A. Set the area 0.0.0.1 type to stub on FortiGate A and B.
- B. Configure a virtual link between FortiGate A and B.
- C. Configure a distribute-route-map-in on FortiGate B.
- D. Enable RIP redistribution on FortiGate B.

Answer: D

Explanation:
The diagram shows a multi-area OSPF network where:

\# FortiGate A is in OSPF Area 0 (Backbone area).
\# FortiGate B is in OSPF Area 0.0.0.1 and is connected to an RIP network.
To ensure that OSPF Area 0 (0.0.0.0) learns routes from the external RIP network, FortiGate B must redistribute RIP routes into OSPF.
Steps to achieve this:
1. Enable route redistribution on FortiGate B to inject RIP-learned routes into OSPF.
2. This allows OSPF Area 0.0.0.1 to forward RIP routes to OSPF Area 0 (0.0.0.0), making the external network visible.

NEW QUESTION # 59

......

If you choose our FCSS_EFW_AD-7.6 study materials and use our products well, we can promise that you can pass the FCSS_EFW_AD-7.6 exam and get the FCSS_EFW_AD-7.6 certification. Then you will find you have so many chances to advance in stages to a great level of social influence and success. Our FCSS_EFW_AD-7.6 Guide Torrent can also provide all candidates with our free demo, in order to exclude your concerts that you can check our FCSS_EFW_AD-7.6 exam questions. We believe that you will be fond of our FCSS_EFW_AD-7.6 learning guide.
