

WGU Managing-Cloud-Security Practice Test - Effortless Solution To Pass Exam

WGU - Managing Cloud Security - C838 Exam With 100% Correct Answers

What are the 4 characteristics of cloud computing? CORRECT ANSWERS Broad network access
On-demand services
Resource Pooling
Measured or "metered" service

What NIST publication number defines cloud computing? CORRECT ANSWERS 800-145

What ISO/IEC standard provides information on cloud computing? CORRECT ANSWERS 17788

What is another way of describing a functional business requirement? CORRECT ANSWERS necessary

What is another way of describing a nonfunctional business requirement? CORRECT ANSWERS not necessary

What is the greatest driver pushing orgs to the cloud? CORRECT ANSWERS Cost savings

What is cloud bursting? CORRECT ANSWERS Ability to increase available cloud resources on demand

What are 3 characteristics of cloud computing? CORRECT ANSWERS Elasticity
Simplicity
Scalability

What is a cloud customer? CORRECT ANSWERS Anyone purchasing cloud services

What is a cloud user? CORRECT ANSWERS Anyone using cloud services

What are the three cloud computing service models? CORRECT ANSWERS SaaS(Software as a service)
PaaS(Platform as a service)
IaaS(Infrastructure as a service)

What is IaaS (Infrastructure as a Service)? CORRECT ANSWERS Cloud provider provides all the physical capability and administration, while the customer is responsible for logical resources.

To address the problems of WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam candidates who are busy, ValidTorrent has made the WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) dumps PDF format of real WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam questions. This format's feature to run on all smart devices saves your time. Because of this, the portability of WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) dumps PDF aids in your preparation regardless of place and time restrictions.

We offer a money-back guarantee, which means we are obliged to return 100% of your sum (terms and conditions apply) in case of any unsatisfactory results. Even though the WGU experts who have designed Managing-Cloud-Security assure us that anyone who studies properly cannot fail the exam, we still offer a money-back guarantee. This way we prevent pre and post-purchase anxiety.

Valid Managing-Cloud-Security Test Review & Managing-Cloud-Security Valid Test Review

The passing rate of our Managing-Cloud-Security training quiz is 99% and the hit rate is also high. Our professional expert team

seizes the focus of the exam and chooses the most important questions and answers which has simplified the important Managing-Cloud-Security information and follow the latest trend to make the client learn easily and efficiently. We update the Managing-Cloud-Security Study Materials frequently to let the client practice more. We provide the function to stimulate the Managing-Cloud-Security exam and the timing function of our Managing-Cloud-Security study materials to adjust your speed to answer the questions. You will pass the Managing-Cloud-Security exam easily.

WGU Managing Cloud Security (JY02) Sample Questions (Q32-Q37):

NEW QUESTION # 32

An organization is planning for an upcoming Payment Card Industry Data Security Standard (PCI DSS) audit and wants to ensure that only relevant files are included in the audit materials. Which process should the organization use to ensure that the relevant files are identified?

- A. Tokenization
- **B. Categorization**
- C. Anonymization
- D. Normalization

Answer: B

Explanation:

Categorization is the process of systematically identifying and classifying files according to content and relevance. In preparation for a PCI DSS audit, it is critical to identify which files fall within scope—those that contain cardholder data or impact its security.

Normalization adjusts data format, tokenization substitutes sensitive data with tokens, and anonymization removes identifiers. While useful, none directly address the task of isolating "relevant files" for audit.

Categorization ensures that files are grouped correctly, allowing auditors to focus on the proper scope and preventing unnecessary exposure of unrelated data.

This step aligns with PCI DSS requirements that limit scope to systems and data directly affecting cardholder data security. Proper categorization streamlines audits and demonstrates effective data governance.

NEW QUESTION # 33

Which technology is increasingly deployed in enterprise environments for applications such as digital tracking of the supply chain?

- A. Cloud computing
- **B. Internet of Things**
- C. Machine learning
- D. Big data

Answer: B

Explanation:

The Internet of Things (IoT) is increasingly deployed in enterprise environments for digital tracking of supply chains. Managing Cloud principles explain that IoT enables physical objects—such as sensors, tags, and devices—to collect and transmit data in real time.

In supply chain scenarios, IoT devices track location, temperature, humidity, and movement of goods throughout manufacturing, transportation, and storage. This continuous data collection improves visibility, efficiency, and accountability across the supply chain.

Cloud platforms commonly support IoT by aggregating, storing, and analyzing the collected data.

Cloud computing provides infrastructure, big data analyzes large datasets, and machine learning derives insights, but IoT is the enabling technology that performs real-time tracking. Therefore, Internet of Things is the correct answer.

NEW QUESTION # 34

Which cloud infrastructure risk is the responsibility of the cloud provider?

- A. Security governance
- B. Data security
- **C. Physical security**
- D. Application security

Answer: C

Explanation:

Physical security is a cloud infrastructure risk that is the responsibility of the cloud provider. Managing Cloud principles explain that providers are responsible for securing data center facilities, including buildings, hardware, power systems, and environmental controls.

This includes access controls, surveillance, guards, and protection against physical threats such as theft, vandalism, and natural disasters. Customers do not have physical access to cloud data centers and therefore rely entirely on the provider to manage these risks.

Data security and application security are typically shared responsibilities, while security governance is largely the customer's responsibility. Therefore, physical security is the correct answer.

NEW QUESTION # 35

Which description characterizes the application programming interface (API) format known as Simple Object Access Protocol (SOAP)?

- A. Consists of guidelines and best practices for creating scalable web services
- **B. Provides a framework for exchanging structured information using web services**
- C. Delivers good performance and scalability
- D. Supports different data formats such as JSON, XML, and YAML

Answer: B

Explanation:

Simple Object Access Protocol (SOAP) is an API format that provides a framework for exchanging structured information using web services. Managing Cloud principles explain that SOAP is a protocol-based messaging standard that relies on XML for message formatting.

SOAP defines strict standards for message structure, communication protocols, and error handling, making it suitable for enterprise environments that require reliability, security, and formal contracts. It supports features such as authentication, encryption, and transaction integrity.

The other options describe characteristics of RESTful APIs. SOAP is XML-based and does not support multiple data formats. Therefore, the correct description is the structured web service framework.

NEW QUESTION # 36

An organization is sharing personal information that is defined in its privacy policy with a trusted third party. What else should the organization communicate to the trusted third party about the personal information?

- **A. The organization's privacy policy and handling practices**
- B. A notice of any contractual obligations that do not align with the privacy policy
- C. A copy of federal privacy laws regarding unauthorized data disclosure
- D. The results of the organization's most recent privacy audit

Answer: A

Explanation:

When sharing personal data with a trusted third party, organizations must ensure that the recipient understands and adheres to the organization's privacy policy and handling practices. This ensures consistent treatment of personal information across entities and aligns with consent provided by individuals.

Audit results and contractual notices are internal matters, while federal laws define obligations but do not substitute for organizational policies. By explicitly sharing policies and practices, organizations reinforce accountability and ensure compliance with privacy regulations such as GDPR, HIPAA, or CCPA.

This communication sets expectations for data use, retention, and disclosure. It also provides a defensible framework in case of regulatory inquiries, showing that due diligence was performed when transferring data to third parties.

NEW QUESTION # 37

.....

As we all know, a lot of efforts need to be made to develop a Managing-Cloud-Security learning prep. Firstly, a huge amount of first hand materials are essential, which influences the quality of the compilation about the Managing-Cloud-Security actual test guide. We

have tried our best to find all reference books. Then our experts have carefully summarized all relevant materials of the Managing-Cloud-Security exam. Also, annual official test is also included. They have built a clear knowledge frame in their minds before they begin to compile the Managing-Cloud-Security Actual Test guide. It is a long process to compilation. But they stick to work hard and never abandon. Finally, they finish all the compilation because of their passionate and persistent spirits. So you are lucky to come across our Managing-Cloud-Security exam questions.
