Project-Management学習教材 & Project-Management日本語版テキスト内

容

大量の時間と金銭がかかるのに比べて、正しい仕方は肝心なことです。もしあなたはNCARB Project-Management試験に準備しているなら、あなたのための整理される備考資料はあなたにとって最善のオプションです。我々の目標はあなたに試験にうまく合格させることです。弊社の誠意を信じてもらいたいし、NCARB Project-Management試験2成功するのを祈って願います。

NCARB Project-Management 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">Project Execution: This section of the exam measures skills of architectural associates and covers the management of project execution through administrative procedures rather than design decisions. It addresses evaluating budgets, managing scope changes, preparing project documentation in line with delivery methods, and securing necessary approvals from relevant authorities.
トピック 2	<ul style="list-style-type: none">Project Quality Control: This section of the exam measures skills of project managers and covers procedures for ensuring quality and maintaining the Standard of Care throughout the project. It focuses on applying regulatory requirements, reviewing documentation for quality, reducing risks and liabilities, and managing the design process to preserve its objectives
トピック 3	<ul style="list-style-type: none">Resource Management: This section of the exam measures the skills of project managers and covers how to determine the right team composition and manage time allocation for successful project delivery. It focuses on evaluating criteria for assembling teams and ensuring resources are properly managed to execute the project within agreed terms.
トピック 4	<ul style="list-style-type: none">Project Work Planning: This section of the exam measures the skills of architectural associates and covers the development and communication of an effective project work plan. It emphasizes maintaining schedules, setting clear criteria for work planning, and ensuring consistent communication with stakeholders, including owners, contractors, consultants, and internal staff.
トピック 5	<ul style="list-style-type: none">Contracts: This section of the exam measures the skills of project managers and covers the analysis of contracts that govern the relationships between architects, owners, contractors, and consultants. It highlights verifying adherence to agreements, interpreting key contractual elements, and ensuring consultant work is properly integrated into the project.

NCARB ARE 5.0 Project Management (PjM) Exam 認定 Project-Management 試験問題 (Q35-Q40):

質問 # 35

Which preliminary deliverables are usually provided for a schematic phase submission? Check the four that apply.

- A. Finish schedule
- B. Floor plans
- C. Cost estimates
- D. Elevations and sections
- E. Site plan
- F. Detailed specifications

正解: B、C、D、E

解説:

During the Schematic Design (SD) phase, the architect develops preliminary design concepts to establish the general scope, scale, and relationships of the project components. The typical deliverables are conceptual drawings and studies that communicate the design intent clearly but without detailed development.

- * Floor plans (A): Basic layouts showing room arrangements and spatial relationships are fundamental schematic deliverables.
- * Elevations and sections (B): These help communicate the building's exterior appearance and vertical spatial relationships.
- * Site plan (C): Provides context for the building's location, orientation, and relationship to existing site features.
- * Cost estimates (E): Early cost estimates are usually prepared to inform budget decisions and feasibility.

Deliverables not typical in the schematic phase:

* Finish schedule (D): This is usually developed later in Design Development or Construction Documents phases when finishes are selected in detail.

* Detailed specifications (F): These are produced during Construction Documents, far beyond schematic design.

Thus, the four preliminary deliverables for schematic phase submissions are floor plans, elevations and sections, site plan, and cost estimates.

質問 # 36

The owner and architect sign a Basic Services Agreement for the design of a museum.

Based on AIA Document B101-2017, Owner and Architect Agreement, which line items should be excluded from the architect's cost estimate? Check the two that apply.

- A. Plumbing fixtures
- B. HVAC equipment
- C. Landscape plants
- D. Furniture, furnishings, and equipment design
- E. Roofing material
- F. Doors and windows

正解: C、D

解説:

Per AIA B101-2017 § 6.1, the "Cost of the Work" includes items designed or specified by the architect in the construction contract. FF&E and owner-provided landscape features (like plants, art, and loose furniture) are typically excluded, as these may be contracted separately by the owner or coordinated outside basic architectural services.

質問 # 37

Which document defines the architect's scope of services and responsibilities?

- A. Construction Documents
- B. Contractor's Bid Proposal
- C. Owner-Architect Agreement (B101)
- D. General Conditions (A201)

正解: C

解説:

The Owner-Architect Agreement (AIA B101) is the primary contract outlining the architect's scope, deliverables, compensation, and responsibilities. It establishes the legal framework for services. General Conditions cover construction contract provisions; bid proposals are contractor documents; construction documents are design deliverables. ARE 5.0 PjM requires knowledge of these agreements to manage scope and responsibilities.

質問 # 38

According to ATA Document C401, Architect-Consultant Agreement, clearances and tolerances required by the mechanical work relative to the structural system are coordinated through which one of the following parties?

- A. Mechanical engineer

- B. Contractor
- **C. Architect**
- D. Structural engineer

正解: C

解説:

According to the ATA Document C401, Architect-Consultant Agreement, the architect is responsible for coordinating clearances and tolerances required by mechanical work relative to the structural system. This means that the architect acts as the central coordinator among consultants, ensuring that mechanical systems fit properly within the structural framework without conflicts. The architect reviews mechanical engineer's drawings and requirements for clearances and tolerances and communicates these needs to the structural engineer or contractor as necessary. This coordination helps prevent conflicts during construction and ensures the project integrates all disciplines smoothly.

This responsibility falls on the architect because the architect oversees the entire project design and facilitates coordination among all consultants. Neither the structural engineer nor the mechanical engineer alone manages this coordination, and the contractor typically implements the work rather than designs or coordinates these specific technical clearances.

質問 # 39

During which project phase is the architect primarily responsible for preparing detailed construction drawings and specifications?

- A. Schematic Design
- B. Bidding and Negotiation
- C. Design Development
- **D. Construction Documents**

正解: D

解説:

The Construction Documents phase is when the architect develops comprehensive and detailed drawings and specifications that define the final design for bidding, permitting, and construction. This phase translates the design intent from schematic and design development drawings into precise documents that guide the contractor's work. Construction documents include plans, elevations, sections, details, schedules, and written specifications. These documents must be coordinated and thoroughly checked to reduce errors and omissions.

This phase also sets the basis for cost estimating and bidding. The architect's role is critical in ensuring these documents conform to all applicable codes, standards, and client requirements. This content aligns with the ARE 5.0 PjM division focus on project phases and deliverables, as outlined in NCARB's ARE 5.0 Handbook and Project Delivery guidelines.
