## 最新的 Peoplecert Certification ITILFNDv5 免費考試真題 (Q126-Q131):

### 問題 #126

Which activity has the purpose of developing, integrating, and testing digital products to transform designs into functional solutions?

- A. Operate
- B. Support
- C. Discover
- **D. Build**

答案：D

解題說明：

The build activity is responsible for developing, integrating, and testing digital products, transforming designs and requirements into functional solutions that are ready for deployment and use.

### 問題 #127

What is the purpose of the 'support' activity?

- A. To discover new business opportunities
- **B. To assist users and maintain service performance**
- C. To build solution components
- D. To design service architectures

答案： B

解題說明：

The purpose of the support activity is to assist users and maintain service performance, so option A is correct. In ITIL, support focuses on helping users, managing incidents and issues, minimizing disruption, and sustaining acceptable service quality when problems occur. It works closely with other activities such as operate and deliver, but its emphasis is on responding to needs, restoring service, and reducing impact. Designing service architectures belongs to design. Building solution components belongs to build. Discovering new opportunities belongs to discover. Support is essential in maintaining trust and user confidence because it is often the activity users encounter most directly when something goes wrong or when they need help. Effective support contributes significantly to perceived service quality and the wider experience of service consumption.

問題 #128

Which activity ensures that new or changes products are seamlessly introduced in the live environment?

- A. Build
- B. Deliver
- C. Transition
- D. Operate

答案： C

解題說明：

Transition is the activity that ensures new or changed products are introduced into the live environment in a controlled and seamless way, so option B is correct. In ITIL, transition bridges development and live operation. It includes planning releases, validating readiness, deploying changes, minimizing disruption, and confirming that the new or changed product can operate effectively in its target environment. Build focuses on creating or modifying solution components.

Deliver is concerned with providing services to users. Operate is about maintaining and monitoring live products and systems.

Transition is essential because even a well-designed and well-built product can fail if it is introduced poorly. ITIL therefore treats transition as a distinct lifecycle activity that protects service quality, reduces risk, and supports smooth adoption of changes by both technical teams and service consumers.

問題 #129

How should the ITIL Guiding Principle 'optimize and automate' be applied?

- A. By automating all activities immediately
- B. By automating processes before optimizing them
- C. By replacing people with technology across all functions
- D. By optimizing processes before automating them

答案： D

解題說明：

The guiding principle "optimize and automate" should be applied by optimizing processes before automating them, so option B is correct. ITIL warns against automating poor or unnecessary activities because automation can make waste faster and more expensive instead of improving value. Organizations should first understand the workflow, remove unnecessary complexity, simplify where possible, and confirm that the process supports desired outcomes. Only then should they automate appropriate parts of the work. Automation should complement human capabilities, not blindly replace people in every function. Some activities still require judgment, empathy, creativity, and contextual understanding. This principle reflects ITIL's broader emphasis on practicality, value, and continual improvement. Optimization ensures the work is worth doing, and automation then helps deliver it more efficiently, consistently, and at scale.

問題 #130

Which set correctly lists the components of the ITIL Value System (VS)?

- A. Value streams, projects, releases, incidents, changes
- B. Guiding principles, governance, value chain, management practices, continual improvement
- C. Guiding principles, governance, discover, deliver
- D. Products, services, customers, suppliers, partners

答案： B

解題說明：

The correct components of the ITIL Value System are guiding principles, governance, value chain, management practices, and continual improvement, so option D is correct. The ITIL Value System provides the overall model for how an organization ensures its products and services create value in a coherent, aligned, and adaptable way. The guiding principles provide universal recommendations for decision-making. Governance ensures direction, evaluation, and monitoring. The value chain defines the high-level activities used across the lifecycle.

Management practices provide the capabilities needed to perform work. Continual improvement ensures that the whole system evolves and remains effective over time.
