A. Its deployment is dependent on the controller.
B. It introduces the source routing mechanism conforming to SDN.
C. Its deployment is dependent on LDP and RSVP.
D. It reduces the number of protocols and extends IGP/BGP to support label distribution without depending on LDP or RSVP.
Answer: B,D

4.If only one firewall is deployed at the egress of the network, a failure on the firewall will affect services on the entire network. To improve network reliability, you can deploy two or more firewalls and set up a stack system. Member firewalls do not need to be managed independently. You only need to configure the stack system.
