## Understanding functional and technical aspects of Design Resilient Architectures

The following will be discussed in the **AMAZON AWS-SOLUTIONS-ARCHITECT-ASSOCIATE exam dumps**:

- Select appropriate data security options

- Select high-performing networking solutions for a workload
- Choose high-performing database solutions for a workload

The following should be prepared in advance:

- **Performance Efficiency:** The ability to use computing resources efficiently to meet system requirements, and to maintain that efficiency as demand changes and technologies evolve.
- **Operational Excellence:** The ability to support development and run workloads effectively, gain insight into their operations, and to continuously improve supporting processes and procedures to deliver business value.
- **Cost Optimization:** The ability to run systems to deliver business value at the lowest price point.
- **Reliability:** The reliability pillar encompasses the ability of a workload to perform its intended function correctly and consistently when it's expected to. This includes the ability to operate and test the workload through its total lifecycle. This paper provides in-depth, best practice guidance for implementing reliable workloads on AWS.
- **Security:** The security pillar encompasses the ability to protect data, systems, and assets to take advantage of cloud technologies to improve your security.

## Topics covered in AWS Solutions Architect Associate Exam

Candidates must know the topics before they start of preparation. Because it will really help them in hitting the core. Our **AMAZON AWS-SOLUTIONS-ARCHITECT-ASSOCIATE exam dumps** will include the following topics:

- Design Cost-Optimized Architectures
- Design High-Performing Architectures
- Design Resilient Architectures
- Design Secure Applications and Architectures

The Amazon AWS-Solutions-Associate Exam is intended for individuals who have experience in designing and deploying scalable, highly available, and fault-tolerant systems on AWS. Candidates should also have a good understanding of AWS services, security, and compliance. ## Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q402-Q407):

### NEW QUESTION # 402

A company has a web application that allows users to upload short videos. The videos are stored on Amazon EBS volumes and analyzed by custom recognition software for categorization.

The website contains static content that has variable traffic with peaks in certain months. The architecture consists of Amazon EC2 instances running in an Auto Scaling group for the web application and EC2 instances running in an Auto Scaling group to process an Amazon SQS-queue. The company wants to re- architect the application to reduce operational overhead using AWS managed services where possible and remove dependencies on third-party software.

Which solution meets these requirements?

- A. Store the uploaded videos in Amazon EFS and mount the file system to the EC2 instances for the web application. Process the SQS queue with an AWS Lambda function that calls the Amazon Rekognition API to categorize the videos.

- B. Use AWS Elastic Beanstalk to launch EC2 instances in an Auto Scaling group for the application and launch a worker environment to process the SQS queue. Replace the custom software with Amazon Rekognition to categorize the videos.
- **C. Use Amazon ECS containers for the web application and Spot instances for the Scaling group that processes the SQS queue. Replace the custom software with Amazon Rekognition to categorize the videos.**
- D. Host the web application in Amazon S3. Store the uploaded videos in Amazon S3. Use S3 event notification to publish events to the SQS queue. Process the SQS queue with an AWS Lambda function that call the Amazon Rekognition API to categorize the videos.

#### **NEW QUESTION # 403**

Which tool analyzes account resources and provides a detailed inventory of changes over time?

- A. AWS CloudFormation
- B. AWS Service Catalog
- C. Amazon CloudWatch
- **D. AWS Config**

**Answer: D**

#### **NEW QUESTION # 404**

A company's website hosted on Amazon EC2 instances processes classified data stored in Amazon S3. Due to security concerns, the company requires a private and secure connection between its EC2 resources and Amazon S3.

Which solution meets these requirements?

- A. Set up an IAM policy to grant read-write access to the S3 bucket.
- **B. Set up S3 bucket policies to allow access from a VPC endpoint.**
- C. Set up a NAT gateway to access resources outside the private subnet.
- D. Set up an access key ID and a secret access key to access the S3 bucket.

**Answer: B**

Explanation:

This solution meets the following requirements:

It is private and secure, as it allows the EC2 instances to access the S3 bucket without using the public internet. A VPC endpoint is a gateway that enables you to create a private connection between your VPC and another AWS service, such as S3, within the same Region. A VPC endpoint for S3 provides secure and direct access to S3 buckets and objects using private IP addresses from your VPC. You can also use VPC endpoint policies and S3 bucket policies to control the access to the S3 resources based on the endpoint, the IAM user, the IAM role, or the source IP address.

It is simple and scalable, as it does not require any additional AWS services, gateways, or NAT devices.

A VPC endpoint for S3 is a fully managed service that scales automatically with the network traffic.

You can create a VPC endpoint for S3 with a few clicks in the VPC console or with a simple API call.

You can also use the same VPC endpoint to access multiple S3 buckets in the same Region.

#### **NEW QUESTION # 405**

A company hosts its web applications in the AWS Cloud. The company configures Elastic Load Balancers to use certificates that are imported into AWS Certificate Manager (ACM). The company's security team must be notified 30 days before the expiration of each certificate.

What should a solutions architect recommend to meet the requirement?

- A. Use AWS trusted Advisor to check for certificates that will expire within to days. Create an Amazon CloudWatch alarm that is based on Trusted Advisor metrics for check status changes Configure the alarm to send a custom alert by way of Amazon Simple Notification Service (Amazon SNS)
- B. Add a rule in ACM to publish a custom message to an Amazon Simple Notification Service (Amazon SNS) topic every day beginning 30 days before any certificate will expire.
- C. Create an Amazon EventBridge (Amazon CloudWatch Events) rule to detect any certificates that will expire within 30 days. Configure the rule to invoke an AWS Lambda function. Configure the Lambda function to send a custom alert by way of Amazon Simple Notification Service (Amazon SNS).
- D. Create an AWS Config rule that checks for certificates that will expire within 30 days. Configure Amazon EventBridge (Amazon CloudWatch Events) to invoke a custom alert by way of Amazon Simple Notification Service (Amazon SNS) when AWS Config reports a noncompliant resource

#### NEW QUESTION # 406

A Solution Architect is developing an AWS Lambda-based service for a social networking game to retrieve information on tourist landmarks stored in an Amazon DynamoDB table. The Solution Architect wants to minimize costs as the service scales to many millions of users through a mobile app.

How can the Solution Architect optimize performance while minimizing costs? (Select TWO)

- A. Use DynamoDB Accelerator (DAX), and configure Auto Scaling of read throughput on the DynamoDB table.
- B. Authorize mobile clients to communicate directly with DynamoDB through AWS STS tokens, and configure DynamoDB for global replication and Auto Scaling.
- C. Configure AppSync to cache responses on the mobile client and configure Auto Scaling of reads on the DynamoDB table.
- D. Expose the Lambda function through the Amazon API Gateway, configure the endpoint with caching, and configure Auto Scaling of read throughput on the DynamoDB table.
- E. Configure Amazon CloudFront, specify an appropriate TTL for response caching, and configure the DynamoDB table as the origin.

**Answer: A,D**

#### NEW QUESTION # 407
