153. Frage

A typical scalable architecture in NSX would feature:

- A. Manual routing configurations for each segment
- **B. Distributed routing and centralized services**
- C. A focus on physical, rather than virtual, network elements
- D. A single, centralized router for all traffic

Antwort: B

154. Frage

In NSX, the data plane is responsible for?

- **A. Performing packet forwarding**
- B. Physical network configuration
- C. User authentication
- D. Managing NSX licensing

Antwort: A

155. Frage

What is a primary goal of IT architecture?

- A. To outline the organizational structure
- B. To manage social media presence
- C. To define software development practices
- **D. To establish a technology framework and standards**

Antwort: D

156. Frage

What is the primary advantage of bare-metal NSX Edge reference designs?

- A. Reduced licensing costs
- B. Simpler configuration and management
- C. Easier integration with third-party applications
- **D. Optimized performance by leveraging dedicated resources**

Antwort: D

157. Frage

A global media organization is planning to deploy VMware NSX to manage their network infrastructure. The organization needs a unified networking and security platform that can handle their geographically dispersed data centers while providing high availability, seamless workload mobility, and efficient disaster recovery. A Solutions Architect is tasked with designing a multi-location NSX deployment that addresses requirements.

Given the organization's needs, how should the Solutions Architect design the multi-location NSX deployment?

- A. Deploy NSX in a single location and use VPNs to connect the other locations to the primary site.
- B. Deploy NSX independently in each location and manage each location separately.
- **C. Deploy NSX Federation to manage local NSX Managers in each location.**

Antwort: C

Begründung:

1. Why NSX Federation is the Right Solution (Correct Answer - C)

- * NSX Federation allows centralized management of multiple NSX environments across locations.
- * Enables seamless workload mobility and security policy enforcement across data centers.
- * Supports disaster recovery by ensuring consistent network and security policies are applied globally.
- * Key Benefits Include:
 - * Global Security and Networking Policy Management.
 - * Centralized Administration for all NSX deployments.
 - * Automated failover and disaster recovery across sites.

2. Why Other Options are Incorrect

* (A - VPNs Only):

- * VPNs alone do not provide unified management; they only secure site-to-site communication.

* (B - Independent NSX Instances):

- * Managing separate NSX instances per site is complex and does not support global policy synchronization.

3. Key Considerations for NSX Federation Deployment

- * Each NSX site must be running the same NSX version and build.
- * A Global Manager (GM) is required for centralized management.
- * Inter-site connectivity must support high-performance and low-latency communication for real-time policy enforcement.
