## ACD201 Pass4sure & ACD201 Exam Discount

Based on our years of experience, taking the Appian ACD201 exam without proper preparation is such a suicidal move. The Appian Senior Developer is not easy to achieve because you first need to pass the Appian Senior Developer ACD201 exam. The only way to be successful with your Appian Senior Developer exam is by preparing it well with Appian ACD201 Dumps. This Appian Senior Developer ACD201 exam is not even easy to go through. Most people failed it due to a lack of preparation.

## Appian ACD201 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• <b>Application Design and Development:</b> This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Data Management:</b> This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Advanced Appian Concepts:</b> This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Performance and Scalability:</b> This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.</li> </ul>

## Appian Senior Developer Sample Questions (Q70-Q75):

### NEW QUESTION # 70

You're building an application with a review workflow.

Each submission must be approved by three users who can each approve or reject their request, and leave a comment. This action changes the status of the submission to 'Approved' or 'Rejected' correspondingly, and pushes the review to the previous or next assignee.

Which data model captures the workflow requirements appropriately?

- A. Two tables:  
Review with columns id, statusId, comment, user1, user2, user3  
RefStatus with columns id, value
- B. Three tables:  
Review to store id, statusId, comment  
RefStatus with columns id, value
- C. Two tables:  
Review with columns id, statusId, comment, user  
RefStatus with columns id, value

**Answer: B**

Explanation:

Review User with columns id, reviewId, user

Explanation:

Using three tables - Review, RefStatus, and Review User - enables you to track each user's approval or rejection, comments, and status changes for each review, supporting a flexible, normalized workflow for multiple reviewers.

### NEW QUESTION # 71

Your client wants their customers to be able to schedule appointments directly from their website without going to an Appian user environment.

You need to build an embedded interface to be added to your client's web page. The style of the embedded interface should be consistent with the host web page.

Which three custom styling options can be configured in the Themes section of embedded interfaces?

(Choose three.)

- A. Two or three column layout
- B. Web font stylesheet URL
- C. Font Family
- D. Asymmetrical layout

- E. Page background color

Answer: B,C,E

Explanation:

Page background color - You can customize the background color to match the host webpage's theme.

Font family - You can set the font family to ensure the embedded interface aligns with the client's branding.

Web font stylesheet URL - This allows the use of custom web fonts, further aligning the style with the host site.

#### NEW QUESTION # 72

You receive a warning about approaching the 2,000,000 row limit with synced records in your Production environment.

What are two ways to efficiently address this warning to prevent reaching the limit? (Choose two.)

- A. Apply one or more source filters to limit the number of rows synced in Appian.
- B. Keep only necessary data and plan to move the archived data to an audit table in a longer run.
- C. Disable data sync immediately to prevent user facing-front end issues.
- D. Design the process to write data in batches of 1,000.

Answer: A,B

Explanation:

Keeping only necessary data and moving archived data to an audit table reduces the number of synced rows, addressing the limit efficiently.

Applying source filters limits the data that is synced, preventing the total row count from exceeding the limit.

#### NEW QUESTION # 73

An insurance application has a dashboard in which all the cases with "Accident" case type and "Health Insurance" insurance type are displayed to the user, using the following query:

```

a!query(
  logicalExpression: a!queryLogicalExpression(
    operator: "AND",
    filters: {
      a!queryFilter(
        field: "caseType",
        operator: "=",
        value: "Accident"
      ),
      a!queryFilter(
        field: "insuranceType",
        operator: "=",
        value: "Health Insurance"
      )
    }
  ),
  pagingInfo: a!pagingInfo(
    startIndex: 1,
    batchSize: 10,
    sort: a!sortInfo(
      field: "createdDate"
    )
  )
)

```

You need to update the query entity to display all the cases that are "Accident" case type and "Health Insurance" insurance type, or created in the last ten days.

What is the right configuration for the logical expression?

```

alqueryLogicalExpression(
  operator: "AND",
  filters: {
    alqueryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    alqueryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    )
  },
  alqueryFilter(
    field: "createdDate",
    value: today() - 10,
    operator: ">="
  )
)

```

appian

• A.

```

alqueryLogicalExpression(
  operator: "AND",
  filters: {
    alqueryFilter(
      field: "caseType",
      operator: "=",
      value: "Accident"
    ),
    alqueryFilter(
      field: "insuranceType",
      operator: "=",
      value: "Health Insurance"
    )
  },
  logicalExpressions: alqueryLogicalExpression(
    operator: "OR",
    filters: alqueryFilter(
      field: "createdDate",
      value: today() - 10,
      operator: ">="
    )
  )
)

```

appian

• B.

```

alqueryLogicalExpression(
  operator: "OR",
  filters: alqueryFilter(
    field: "createdDate",
    value: today() - 10,
    operator: ">="
  ),
  logicalExpressions: alqueryLogicalExpression(
    operator: "AND",
    filters: {
      alqueryFilter(
        field: "caseType",
        operator: "=",
        value: "Accident"
      ),
      alqueryFilter(
        field: "insuranceType",
        operator: "=",
        value: "Health Insurance"
      )
    }
  )
)

```

- C.

**Answer: C**

Explanation:

A filter for createdDate >= today() - 10 (records created in the last 10 days).

A nested AND logical expression that requires both caseType = "Accident" and insuranceType = "Health Insurance".

#### NEW QUESTION # 74

You need to create a read-only grid that displays support case information. Data for the support cases is mapped to the "Case" record type with data sync enabled.

Within the record, there are fields named "createdDateTime" and "resolvedDateTime". These two fields store the timestamps for when a case is created and resolved, respectively.

The grid includes a column indicating the number of hours between when the case was created and when it was resolved. This column must be sortable within the grid.

How should you calculate the hour value that will display in the column?

- A. Create a custom record field that evaluates at sync-time, and calculates the number of hours between when the case was created and the current date and time.
- B. Within the grid column, utilize an Appian function to calculate the number of hours between when the case was created and when it was resolved.
- C. Create a custom record field that evaluates in real-time, and calculates the number of hours between when the case was created and when it was resolved.

**Answer: C**

Explanation:

A custom record field that evaluates in real-time and calculates the hours between "createdDateTime" and "resolvedDateTime" ensures the calculated value is available as a sortable field within the read-only grid.

#### NEW QUESTION # 75

.....

With the rapid development of the economy, the demands of society on us are getting higher and higher. If you can have ACD201

certification, then you will be more competitive in society. Our ACD201 study materials will help you get the according certification. Believe me, after using our ACD201 Study Materials, you will improve your work efficiency. Our ACD201 free training materials will make you more prominent in the labor market than others, and more opportunities will take the initiative to find you.
