The 24/7 support team is just an e-mail away for our customers so that they can contact us anytime. Our team will solve all of their issues as quickly as possible. Free demos and up to 1 year of free updates of our Sitecore Exams are also available at Pass4cram. Buy updated and Real 156-315.81 Exam Questions now and earn your dream 156-315.81 certification with Pass4cram!

Passing the Check Point Certified Security Expert R81 exam is a significant accomplishment in the cybersecurity industry. It demonstrates that the candidate has a deep understanding of Check Point's security solutions, and they have the skills and knowledge to implement them effectively. Check Point Certified Security Expert R81 certification is highly respected in the industry and is recognized globally.

CheckPoint 156-315.81 Exam is an essential certification for security professionals who want to specialize in Check Point's security technologies. It covers a range of advanced topics and tests both theoretical knowledge and practical skills. The CCSE R81 certification is highly valued in the security industry and is recognized by organizations around the world. It is an ideal credential for security professionals who want to advance in their careers or take on new challenges.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q460-Q465):

NEW QUESTION # 460
With Mobile Access enabled, administrators select the web-based and native applications that can be accessed by remote users and define the actions that users can perform the applications. Mobile Access encrypts all traffic using:

- A. HTTPS for web-based applications and 3DES or RC4 algorithm for native applications. For end users to access the native applications, no additional software is required.

- B. HTTPS for web-based applications and 3DES or RC4 algorithm for native applications. For end users to access the native applications, they need to install the SSL Network Extender.
- C. HTTPS for web-based applications and AES or RSA algorithm for native applications. For end users to access the native application, no additional software is required.
- D. HTTPS for web-based applications and AES or RSA algorithm for native applications. For end users to access the native application, they need to install the SSL Network Extender.

Answer: B

Explanation:
Mobile Access encrypts all traffic using HTTPS for web-based applications and 3DES or RC4 algorithm for native applications. For end users to access the native applications, they need to install the SSL Network Extender, which is a lightweight VPN client that creates a secure SSL tunnel to the Mobile Access gateway. The SSL Network Extender supports various types of native applications, such as email clients, file sharing, and remote desktop. Reference: Mobile Access Administration Guide, SSL Network Extender

NEW QUESTION # 461
What ports are used for SmartConsole to connect to the Security Management Server?

- A. CPMI (18190)
- B. ICA_Pull (18210), CPMI (18190) https (443)
- C. CPM (19009), CPMI (18190) https (443)
- D. CPM (19009), CPMI (18190) CPD (18191)

Answer: C

Explanation:
The correct answer is C) CPM (19009), CPMI (18190) https (443).
SmartConsole is a client application that connects to the Security Management Server to manage and configure the security policy and objects. SmartConsole uses three ports to communicate with the Security Management Server1:
CPM (19009): This port is used for the communication between the SmartConsole client and the Check Point Management (CPM) process on the Security Management Server. The CPM process handles the database operations and the policy installation.
CPMI (18190): This port is used for the communication between the SmartConsole client and the Check Point Management Interface (CPMI) process on the Security Management Server. The CPMI process handles the authentication and encryption of the SmartConsole sessions.
https (443): This port is used for the communication between the SmartConsole client and the web server on the Security Management Server. The web server provides the SmartConsole GUI and the SmartConsole extensions.
The other options are incorrect because they either include ports that are not used by SmartConsole or omit ports that are used by SmartConsole.

NEW QUESTION # 462
Which view is NOT a valid CPVIEW view?

- A. VPN
- B. PDP
- C. RAD
- D. IDA

Answer: B

Explanation:
Explanation
PDP is not a valid CPVIEW view. CPVIEW is a command-line tool that shows the status of different system parameters, such as CPU, memory, disk, network, and firewall. The valid views are IDA, RAD, VPN, FW, QoS, and others. PDP is a process that handles identity awareness and authentication. NEW QUESTION # 463

D18912E1457D5D1DDCBD40AB3BF70D5D

The system administrator of a company is trying to find out why acceleration is not working for the traffic.

The traffic is allowed according to the rule based and checked for viruses. But it is not accelerated. What is the most likely reason that the traffic is not accelerated?

- A. The connection is destined for a server within the network
- B. The packet is the second in an established TCP connection
- C. The connection required a Security server
- D. The packets are not multicast

Answer: C

NEW QUESTION # 464

IF the first packet of an UDP session is rejected by a rule definition from within a security policy (not including the clean up rule), what message is sent back through the kernel?

- A. TCP RST
- B. Nothing
- C. ICMP unreachable
- D. TCP FIN

Answer: B

Explanation:

If the first packet of a UDP session is rejected by a rule definition from within a security policy (not including the clean up rule), nothing is sent back through the kernel. This is because UDP is a connectionless protocol that does not require an acknowledgement from the receiver. Therefore, if a UDP packet is dropped by the Firewall, the sender will not receive any feedback or notification.
