NEW QUESTION # 89
Cloud Security Posture Management operational modes for cloud accounts are:

- A. Read Only, Full Protection. Region Lock
- B. Read Only, Read/Write. Full Protection
- C. Read/Write, Partial Protection, Full Protection
- D. Read Only, Read/Write. Region Lock

Answer: A

Explanation:

Acquiring Cloud Accounts

Cloud Security Posture Management must complete an acquisition process once it connects to a public cloud in order to collect inventory data. During this process, CSPM incorporates cloud resources such as regions, Security Groups, and instances from the cloud service provider. Administrators may acquire account data from AWS, Azure, and GCP public clouds.

To begin acquiring data from a public cloud, Cloud Security Posture Management must assign an operational mode to the cloud account. Administrators may assign one of the following operations to the cloud account:

- Read Only - Monitors and visualizes cloud accounts through Cloud Security Posture Management.

Check Point®
SOFTWARE TECHNOLOGIES LTD.

NEW QUESTION # 90
Adaptive Security Policies allow the deployment of new cloud based resources without

- A. Paying for new resources
- B. Changing the cloud environment
- C. Installing New Policies
- D. Installing New Applications

Answer: C

Explanation:

Adaptive Security Policy

Creating a Security Policy for public cloud environments requires an adaptive framework that responds to the dynamic changes of the Workload. An adaptive Security Policy uses the CloudGuard Controller to establish a unified policy that granularly defines cloud-based resources. This policy format broadens the scope of network security by protecting resources created from one or more CSPs.

An adaptive Security Policy assists Security and Development teams with streamlining their operations. Administrators may import cloud objects at any time and without the need to schedule a formal system change request to implement a new policy installation to update the rulebase enforced on the Security Gateway. As a result, application owners gain control of their application deployments since they can add and remove resources without impacting security.
