If you want to strive for a further improvement in the IT industry, it's right to choose our PrepAwayTest. PrepAwayTest's NEX exam certification training materials is worked out by IT industry elite team through their own exploration and continuous practice. It has high accuracy and wide coverage. Owning PrepAwayTest's NEX Exam Certification training materials is equal to have the key to success.

NLN NEX Exam Syllabus Topics:

Section	Objectives
Topic 1: Science	- Basic Chemistry 1. Atomic structure and matter 2. Basic chemical principles
	- Biology 1. Human body systems 2. Cell structure and function
	- Basic Arithmetic 1. Fractions, decimals, and percentages 2. Ratios and proportions
Topic 2: Mathematics	- Word Problems 1. Time, measurement, and unit conversions 2. Dosage and medication calculations

- Reading Comprehension

- 1. Inference and conclusion drawing
- 2. Vocabulary in context
- 3. Main ideas and supporting details

Topic 3: Verbal Skills

- Language Usage

- 1. Grammar and sentence structure
- 2. Word meaning and usage

Pass Guaranteed NLN - Useful NEX Valid Test Experience

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status. Passing NEX certification can help you realize these goals and find a good job with high income. If you buy our NEX Practice Test you can pass the NEX exam successfully and easily. And if you study with our NEX exam questions for only 20 to 30 hours, you will pass the NEX exam easily.

NLN Nursing Entrance Exam (Math, Science and Verbal) Sample Questions (Q19-Q24):

NEW QUESTION # 19

The graph below displays survey results.

Data in the graph indicate that

- A. underage nicotine vaping increased in 2023.
- B. total cigarette usage increased in 2023.
- C. vaping is more prevalent than using cigarettes in the total population.
- D. vaping is more prevalent than using cigarettes in the underage population.

Answer: D

Explanation:

This question tests the ability to analyze and compare data presented in a bar graph. The graph shows both cigarette usage and nicotine vaping for total populations and underage populations in two different years.

When focusing on the underage population, the bars for nicotine vaping are clearly higher than those for cigarette usage in both years shown. This indicates that vaping is more prevalent than cigarette smoking among underage individuals. The graph does not show an increase in total cigarette usage, eliminating option B: While vaping is high overall, the clearest and most directly supported conclusion is specific to the underage population. The NEX Science exam frequently includes questions requiring students to identify the most accurate conclusion supported by data rather than making assumptions beyond what is shown.

Therefore, option A is the best answer.

NEW QUESTION # 20

Reading Comprehension

Passage:

Good nutrition is especially important during childhood because the body is growing rapidly. A diet lacking essential nutrients may result in delayed growth, weakened immunity, and difficulty concentrating in school.

Which consequence of poor nutrition is mentioned in the passage?

- A. Delayed growth
- B. Improved athletic performance
- C. Enhanced memory
- D. Increased immunity

Answer: A

Explanation:

The passage explains that childhood nutrition plays a critical role in growth and development. It specifically states that a lack of essential nutrients can lead to delayed growth, weakened immunity, and difficulty concentrating. Option C directly reflects one of the consequences listed in the passage, making it the correct answer. The other options are either the opposite of what is stated or not mentioned at all. NEX reading comprehension questions often test the ability to locate explicit information rather than inferred benefits.

Selecting delayed growth shows careful attention to the details provided in the passage.

NEW QUESTION # 21

The table below shows the average daily requirements of essential amino acids in the diet at various stages of human life.

Daily Mg Needed per Kg of Body Mass				
Essential Amino Acids	Infants	Toddlers	Children	Adults
Histidine	28	*	*	8-12
Isoleucine	70	31	28	10
Leucine	161	73	44	14
Lysine	103	64	44	12
Methionine & cystine	58	27	22	13
Phenylalanine & tyrosine	125	69	22	14
Threonine	87	37	28	7
Valine	93	38	25	10

Which of these amino acids is required in the greatest amount in the diet of toddlers?

- A. Leucine
- B. Valine
- C. Phenylalanine and tyrosine
- D. Lysine

Answer: A

Explanation:

This question requires interpreting data from a table, a common skill tested on the NEX Science exam.

Looking specifically at the column for toddlers, the amino acid with the highest listed requirement (measured in milligrams per kilogram of body mass per day) is leucine. Although lysine, valine, and phenylalanine with tyrosine are also required in significant amounts, leucine has the highest numerical value for toddlers. Leucine is an essential amino acid that plays a critical role in growth, tissue repair, and muscle protein synthesis, which are especially important during early childhood when rapid growth occurs. Because toddlers are in a phase of accelerated development, higher amounts of certain amino acids are required compared to adults. The key to answering this question correctly is careful comparison of the numerical values within the toddler column, not overall trends across all age groups.

NEW QUESTION # 22

Five samples were taken of a population of four-year-old children.

The table shows the sample sizes and mean heights (cm):

Sample #	Sample Size	Mean Height (cm)
1	20	95
2	20	100
3	25	100
4	70	110
5	20	105

Based on these samples, what is the mean height of the population of four-year-old children?

- A. 0
- B. 1
- C. 104.5
- D. 2

Answer: C

Explanation:

This question tests weighted averages. Because the sample sizes are different, you cannot simply average the mean heights. Instead, multiply each sample mean by its sample size, add the results, and divide by the total number of children.

Total children = $20 + 20 + 25 + 70 + 20 = 155$

Total height = $(20 \times 95) + (20 \times 100) + (25 \times 100) + (70 \times 110) + (20 \times 105)$
 $= 1,900 + 2,000 + 2,500 + 7,700 + 2,100$
 $= 16,200$

Mean height = $16,200 \div 155 \approx 104.5$ cm

Therefore, option C is correct. The NEX exam frequently tests understanding that larger samples should carry more weight when calculating population estimates.

NEW QUESTION # 23

A doctor lowered a patient's dosage from 50 mg to 40 mg. What percent decrease was this?

- A. 25%
- B. 20%
- C. 12.5%
- D. 10%

Answer: B

Explanation:

This question tests percent decrease, a common NEX topic. First find the amount of decrease: 50 mg - 40 mg = 10 mg. Next divide the decrease by the original amount:

$10 \div 50 = 0.2$.

Convert the decimal to a percent by multiplying by 100:

$0.2 \times 100 = 20\%$.

Therefore, the correct answer is B. Option D represents the numerical decrease without considering the original value. Option A and C result from incorrect division. On the NEX exam, percent change problems always use the original value as the denominator.

NEW QUESTION # 24

.....

The NLN NEX Certification Exam gives you a chance to develop an excellent career. PrepAwayTest provides latest Study Guide, accurate answers and free practice can help customers success in their career and with excellect pass rate. Including 365 days updates.
