EMC Dell Technologies PowerMax Operate Sample Questions (Q130-Q135):

NEW QUESTION # 130
What is the purpose of the SYMAPI options file?

- A. Change environment variables to streamline the command session
- B. Contain the configuration for the SYMCLI and RDF daemons
- C. Change the behavior of various Solutions Enabler daemons
- D. Change the behavior of the SYMCLI operations and SYMAPI calls

Answer: D

NEW QUESTION # 131
Refer to the exhibit.

SRDF/Metro has been configured between two arrays using a physical witness.

When creating a new SRDF group for the configuration, why is the option to create an SRDF/Metro Witness Group greyed out?

- A. SRDF/Metro Witness Groups can only be created with CLI.
- B. There can only be one SRDF/Metro Witness Group between two arrays
- C. The SRDF Group Label needs to be left blank when creating an SRDF/Metro Witness Group

Answer: B

Explanation:

Step by Step Comprehensive Detailed Explanation:

SRDF/Metro is a high-availability solution that provides synchronous replication between two storage arrays located within a metropolitan distance. It utilizes a witness to prevent data loss in the event of a split-brain scenario (where communication between the arrays is lost).

In SRDF/Metro, there can be only one Witness Group defined between two specific arrays. This Witness Group manages the witness device that acts as a tie-breaker in case of a communication failure between the arrays.

Since the exhibit shows that SRDF/Metro has already been configured between the two arrays using a physical witness, the option to create another SRDF/Metro Witness Group is grayed out because a Witness Group already exists for that pair of arrays.

Why other options are incorrect:

* B. SRDF/Metro Witness Groups can only be created with CLI:While CLI can be used, Witness Groups can also be created through Unisphere for PowerMax.

* C. The SRDF Group Label needs to be left blank when creating an SRDF/Metro Witness Group:

This is not a requirement. Witness Groups can have labels.

You can find this document on the Dell Support website by searching for "Solutions Enabler SRDF Family CLI User Guide."

* Dell PowerMax Family: Essentials and Best Practices Guide:This guide offers a comprehensive overview of SRDF/Metro and its functionalities, including witness configuration and best practices.

NEW QUESTION # 132

The customer has successfully completed a Non-Disruptive Migration.

Use the simulator to verify migration sessions and remove the migration environment.

Answer:

Explanation:
See the explanation for step by step solution.
Explanation:
Okay, I understand. The task is to verify the completion of Non-Disruptive Migrations (NDM) and then remove the migration environment using the Unisphere for PowerMax simulator.
Here's a step-by-step guide on how to do this, based on typical Unisphere functionality and the context of the question:
Steps:
1. Launch the Simulator and Navigate to the Migration Section
* Open Unisphere for PowerMax in your web browser.
* Log in to the simulator.
* In the left-hand navigation pane, locate the section related to migrations. This is usually under either:
* Data Mobility
* Migration
* Expand the relevant section and click onMigrations(or a similar option like "Local Migrations" or
"NDM"). This will take you to the view where you can manage Non-Disruptive Migrations.
2. Verify Migration Session Status
* The Migrations view will list all current and past migration sessions.
* Look for the following status indicators to confirm that the migrations have completed successfully:
* Status:The status should typically be "Completed," "Cutover Complete," or a similar status indicating successful completion.
* Progress:If a progress bar or percentage is shown, it should be at 100% or show that all data has been synchronized.
* Important:If any sessions are still in a "Running," "Synchronizing," or other non-completed state, do not proceed with removing the migration environment. Wait for them to complete.
3. Select Completed Migrations for Removal
* Once you've verified that all relevant migration sessions are successfully completed, select the sessions that you want to remove.
* You can usually select sessions by:
* Clicking a checkbox next to each session.
* Clicking on the session itself (if the interface allows it).
4. Remove the Migration Environment
* After selecting the completed migration sessions, look for an action button or menu option to remove them. This might be labeled:

* "Remove"
* "Delete"
* "Cleanup"
* "Remove Session"
* Click the appropriate button to initiate the removal process.
* Confirmation:You will likely be prompted with a confirmation message to make sure you want to remove the selected migration sessions. Verify that you have selected the correct sessions and confirm the removal.
5. Verify Removal (Optional)
* After the removal operation completes, the Migrations view should refresh.
* Verify that the migration sessions you removed are no longer listed.

NEW QUESTION # 133

An administrator is using Unisphere tor PowerMax Workload Planner to assess the performance and compliance of a PowerMax Storage Group (SG) How does the Planner calculate if the Storage Group workload is stable?

- A. One of the calculated values is within 10-20% of the SL-defined response time
- B. Both calculated values are within the SL-defined response time
- C. Both calculated values are within a 10-15% threshold of the SL-defined response time
- D. One of the calculated values remains within the SL-defined response time

Answer: B

Explanation:
The Workload Planner then compares the two values to the maximum response time associated with its given service level. If both calculated values fall within (under) the service level defined response time band, the compliance state is STABLEhttps://www.dell.com/support/kbdoc/en-us/000022528/how-does-the-workload- planner-function
