# NCP-MCI-6.10 Valid Exam Materials | Exam NCP-MCI-6.10 Pass Guide

Are you aware of the importance of the NCP-MCI-6.10 certification? If your answer is not, you may place yourself at the risk of be eliminated by the labor market. Because more and more companies start to pay high attention to the ability of their workers, and the NCP-MCI-6.10 certification is the main reflection of your ability. If you want to maintain your job or get a better job for making a living for your family, it is urgent for you to try your best to get the NCP-MCI-6.10 Certification. We are glad to help you get the certification with our best NCP-MCI-6.10 study materials successfully.

Our NCP-MCI-6.10 exam questions can meet your needs to the maximum extent, and our NCP-MCI-6.10 learning materials are designed to the greatest extent from the customer's point of view. So you don't have to worry about the operational complexity. As soon as you enter the learning interface of our system and start practicing our NCP-MCI-6.10 Learning Materials on our Windows software, you will find small buttons on the interface. These buttons show answers, and you can choose to hide answers during your learning of our NCP-MCI-6.10 exam quiz so as not to interfere with your learning process. Every espect is perfect.

## Pass Guaranteed Marvelous Nutanix NCP-MCI-6.10 Valid Exam Materials

The web-based NCP-MCI-6.10 mock test is compatible with Chrome, Firefox, Internet Explorer, MS Edge, Opera, Safari, and others. This version of the Nutanix NCP-MCI-6.10 practice exam requires an active internet connection. It does not require any additional plugins or software installation to operate. Furthermore, Android, iOS, Windows, Mac, and Linux support the Nutanix NCP-MCI-6.10 web-based practice exam. Features of the EXAM CODE desktop practice exam software are web-based as well.

## Nutanix NCP-MCI-6.10 Exam Syllabus Topics:

| Topic | Details |
|-------|---------|
| Topic 1 | • Configure Disaster Recovery and Data Protection within a Nutanix Multicloud Environment: This section of the exam measures the skills of Disaster Recovery Specialists and Cloud Engineers and covers configuring protection policies and domains for data security and recovery. Candidates need to identify the right entities for protection, schedule backups, define retention policies, and set up replication to remote sites. Recovery plans must be configured and executed with proper scripting, network mapping, and failover strategies. Metro replication requires understanding failover methodologies, comparing solutions on different hypervisors, and preventing split-brain scenarios. Effective disaster recovery planning ensures minimal downtime and data integrity across environments. |
|  |  |

| | |
|---|---|
| Topic 2 | • Manage Clusters within a Nutanix Multicloud Environment: This section of the exam measures the skills of Infrastructure Engineers and Systems Administrators and covers the administration of Nutanix clusters. Storage management includes creating, reading, updating, and deleting storage containers and volume groups. Configuring AOS and Prism Central settings involves authentication, SSL certificate management, IAM role-based access control, and configuring network segmentation. Network administration procedures focus on creating VLAN-backed subnets, virtual switches, and load-balancing policies while monitoring NIC usage. Lifecycle management includes performing hardware and software updates and maintaining firmware. Hardware maintenance involves adding or removing nodes and physical disks while ensuring proper upgrades and replacements. Intelligent operations require configuring capacity policies, discovering application relationships, and simulating scenarios to optimize performance. |
| Topic 3 | • Manage VMs within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Administrators and Virtualization Engineers and covers managing virtual machines (VMs) within a Nutanix multicloud environment. It includes creating and updating VMs by determining hardware requirements, boot modes, sizing, and configuration based on application needs. Candidates must understand how to deploy VMs using templates, snapshots, and image configurations, ensuring the correct formats for importing and exporting VMs. Migration processes require knowledge of prerequisites, storage, network settings, and software compatibility. Additionally, configuring VM categories and attributes is essential for proper organization and management within the environment, ensuring alignment with labels, storage policies, and security settings. |
| Topic 4 | • Troubleshoot a Nutanix Multicloud Environment: This section of the exam measures the skills of Technical Support Engineers and IT Operations Specialists and covers diagnosing and resolving common issues within a Nutanix multi-cloud environment. Troubleshooting protection policies and recovery plans requires identifying network mapping failures, vNIC issues, script execution problems, and connectivity failures. Metro replication troubleshooting involves addressing naming conventions, network limitations, and replication states. Security issues in AOS and Prism Central must be resolved by managing CVM communications, security warnings, and log analysis. LCM operations require diagnosing failures in inventory updates and version upgrades. Performance troubleshooting involves analyzing logs, reading performance charts, and adjusting VM configurations to meet performance needs. |
| Topic 5 | • Conduct Custom Monitoring within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Analysts and Systems Engineers and covers custom monitoring for optimized performance management. Candidates must analyze performance charts, set retention policies, create custom service level agreements (SLAs), and manage storage based on policies. Creating reports involves identifying the required type, selecting generation frequency, determining retention properties, and customizing report formats for different monitoring needs. Effective monitoring ensures better resource utilization, system efficiency, and proactive issue resolution within the multi-cloud environment. |

# Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q13-Q18):

**NEW QUESTION # 13**
An administrator needs to create a storage container named TestData with the following conditions:
Replication Factor (RF) = 1 (RF1)
Inline Compression enabled
Deduplication disabled
Maximum storage capacity = 100 GiB
How should the administrator complete this task?

- A. Log into Prism Central and create the storage container with a Reserved Capacity of 100 GiB.
- B. Log into Prism Central and create the storage container.
- C. Log into Prism Element and create the storage container.
- D. Log into Prism Element and create the storage container with an Advertised Capacity of 100 GiB.

**Answer: D**

## NEW QUESTION # 14

Which feature deploys a temporary VM to allow an administrator to log in and apply OS patches to a VM template?

- A. Update Configuration
- B. Complete Guest OS Update
- C. Update Guest OS
- D. Create VM from Template

**Answer: B**

Explanation:

Nutanix describes a special process for updating golden images or templates without modifying the original source object directly.
The documentation states:
"Complete Guest OS Update creates a temporary, cloned instance of the template, boots it, and allows administrators to patch or update the operating system. Once updates are applied, the system recomposes the template with the modifications." This process ensures that templates remain clean and version-controlled while still allowing regular OS patching operations. Other options such as Create VM from Template merely instantiate running VMs and do not update the template source. Update Guest OS and Update Configuration refer to VM-level settings but do not create a temporary working copy for template lifecycle management.
Thus, Complete Guest OS Update is the correct feature.

## NEW QUESTION # 15

An administrator receives analert in Prismstating:
"Storage container <container_name> on cluster <cluster_name> will run out of storage resources in approximately 1 day."
However, the cluster hasplenty of available space remaining.
What configuration setting is causing the container to run out of space while the cluster has space remaining?

- A. Replication Factor is set too high.
- B. Reserved Capacity is set too high.
- C. Compression is set too low.
- D. Advertised Capacity is set too low.

**Answer: B**

Explanation:

Reserved Capacity settings define how much storage is exclusively allocated for a specific container.
* Option B (Reserved Capacity is too high) is correct:
* If too much space is reserved for a container, it can report "out of space" while the cluster still has free capacity.
* Options A, C, and D are incorrect:
* Advertised Capacity, Compression, and RF settings do not directly cause storage exhaustion unless misconfigured with Reserved Capacity.
References:
* Nutanix Storage Best Practices#Configuring Reserved and Advertised Capacity
* Nutanix KB#Troubleshooting Storage Container Out-of-Space Alerts

## NEW QUESTION # 16

If an administratorcreates a report with no retention policy configured, how many instances of the report areretained by default?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

By default, Nutanix PrismCentral retains the last 10 instances of a report if no retention policy is configured.
* Option B (10) is correct:
* Nutanixstores up to 10 reports, after which older reports areautomatically deleted.
* Options A (5), C (15), and D (20) are incorrect:

* Whileretention policies can be customized, thedefault setting is 10 reports.
References:
* Nutanix PrismCentral Guide #Report Generation and Retention Policies
* Nutanix KB #How Reports Are Stored and Managed in PrismCentral

**NEW QUESTION # 17**
In Prism Element, how many nodes can be placed into maintenance mode at one time on 12-node FT2 cluster?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

Explanation:
In a 12-node FT2 cluster, onlyonenode can be placed into maintenance mode at a time. This ensures that the cluster maintains data redundancy and protection (FT2 indicates 2-failure tolerance).
From theNutanix Enterprise Cloud Administration (ECA)course materials:
"For FT2 clusters, a maximum of one node can be placed in maintenance mode at a time to ensure the cluster's ability to tolerate failures and maintain quorum."

**NEW QUESTION # 18**
......

More and more people look forward to getting the NCP-MCI-6.10 certification by taking an exam. However, the exam is very difficult for a lot of people. Especially if you do not choose the correct study materials and find a suitable way, it will be more difficult for you to pass the exam and get the NCP-MCI-6.10 related certification. If you want to get the related certification in an efficient method, please choose the NCP-MCI-6.10 Study Materials from our company. We can guarantee that the study materials from our company will help you pass the exam and get the certification in a relaxed and efficient method.
