Fortinet EMEA Advanced Support Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

Which FortiGate feature mitigates DDoS attacks by limiting the rate of incoming connections?

- A. IPS Signature
- B. Web Filtering
- C. Application Control
- **D. DoS Policy**

Answer: D

Explanation:

FortiGate's DoS (Denial of Service) Policy limits the rate of incoming connections or packets to mitigate DDoS attacks, such as SYN floods, by setting thresholds for specific traffic types. IPS Signatures (B) detect specific attack patterns, Application Control (C) manages app usage, and Web Filtering (D) blocks URLs, none of which focus on rate limiting. Exact extract: "DoS policies protect against DDoS attacks by limiting the rate of incoming connections or packets, such as SYN floods, based on configured thresholds."

NEW QUESTION # 35

Which of the following protocols would you expect a typical switch to support?

- A. SIP
- **B. STP**
- **C. VLAN**
- D. OSPF

Answer: B,C

Explanation:

Typical Layer 2 switches support STP (Spanning Tree Protocol) to prevent loops in redundant networks and VLANs (Virtual Local Area Networks) to segment traffic logically. OSPF is a Layer 3 routing protocol typically on routers, and SIP is for VoIP session initiation, not core switch functions. FortiSwitch supports STP variants like MSTP and VLAN tagging. Exact extract: MSTP supports multiple spanning tree instances, where each instance carries traffic for one or more VLANs (the mapping of VLANs to instances is configurable). These protocols include the Spanning Tree Protocol (STP), Multiple Spanning Tree Protocol (MSTP), and Per-VLAN Rapid Spanning Tree Protocol (... FortiSwitch supports Spanning Tree Protocol (STP), Multiple Spanning Tree Protocol (MSTP), and Per-VLAN Rapid Spanning Tree Protocol (RSTP).

Spanning Tree Protocol (STP) is a link-management protocol to enable a layer 2 loop-free topology. STP enables a network to have redundant paths for fault ... Go to WiFi & Switch Controller > FortiSwitch Ports.

Click a port row. Click the Native VLAN column in one of the selected entries to change the native VLAN.

NEW QUESTION # 36

Which FortiGate feature allows for dynamic routing protocol updates to be propagated through an IPsec VPN tunnel?

- A. Virtual Routing and Forwarding (VRF)
- B. Dynamic Routing Gateway
- C. Route-based VPN
- **D. Auto Discovery VPN (ADVPN)**

Answer: D

Explanation:

Auto Discovery VPN (ADVPN) in FortiGate enables dynamic routing protocols (e.g., OSPF, BGP) to propagate updates through IPsec VPN tunnels by automatically creating shortcut paths between spokes. This simplifies configuration and enhances scalability in hub-and-spoke topologies. Route-based VPN (D) supports routing but not dynamic discovery, VRF (C) is for segmentation, and Dynamic Routing Gateway (B) is not a standard Fortinet feature. Exact extract: "ADVPN allows dynamic routing protocols to be used over IPsec VPN tunnels, enabling spokes to discover and communicate directly via shortcuts, improving efficiency in hub-and-spoke setups."

NEW QUESTION # 37

How does a stateful firewall control a TCP session?

- A. TCP source ports are used to control the session
- B. TCP ack numbers are used to control the session
- **C. TCP sequence numbers and TCP flags are used to control the session**
- D. TCP destination ports are used to control the session

Answer: C

Explanation:

A stateful firewall, like FortiGate, tracks TCP sessions by maintaining a state table that includes TCP sequence numbers and flags (e.g., SYN, ACK, FIN) to monitor the connection's lifecycle (establishment, data transfer, termination). This ensures proper session handling, detecting out-of-order packets or invalid states.

Source and destination ports identify the session but don't control its state, and ACK numbers alone are insufficient. Exact extract: "Stateful inspection tracks TCP sessions using sequence numbers and TCP flags (SYN, ACK, FIN, etc.) to ensure packets are valid and part of an established session... FortiGate maintains a state table to monitor the TCP connection states."

NEW QUESTION # 38

In FortiGate, what is the purpose of the 'set webfilter-profile' command in a firewall policy?

- A. Enables deep packet inspection for web traffic
- B. Configures the web proxy settings
- **C. Applies a web filtering profile to block or allow URLs**
- D. Sets the web server authentication profile

Answer: C

Explanation:

The 'set webfilter-profile' command applies a web filtering profile to a firewall policy, enabling URL blocking or allowing based on categories or specific URLs. It does not enable DPI (B), configure proxies (C), or set authentication (D). Exact extract: "The 'set webfilter-profile' command applies a web filtering profile to a firewall policy, controlling access to websites based on URL categories or specific URLs."
