Free4Torrent also offers simple and easy-to-use Emergency Medical Technicians Exam (EMT) Dumps PDF files of real NREMT EMT exam questions. It is easy to download and use on smart devices. Since it is a portable format, it can be used on a smartphone, tablet, or any other smart device. This Emergency Medical Technicians Exam (EMT) PDF file contains the most

probable actual Emergency Medical Technicians Exam (EMT) exam questions.

There is the cost of Test Prep EMT Exam

- The Test Prep EMT Exam is \$80.

NREMT Emergency Medical Technicians Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

An infectious disease spread by the fecal-oral route that is considered an acute infection with a currently available vaccine is

- A. Hepatitis A
- B. Hepatitis E
- C. Hepatitis B
- D. Hepatitis C

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Hepatitis A is transmitted primarily via the fecal-oral route, often through contaminated food or water. It leads to an acute liver infection, not a chronic condition. Unlike Hepatitis C, which has no vaccine, Hepatitis A has an effective vaccine and is preventable with proper hygiene and immunization.

Hepatitis B is spread through blood and sexual contact, not fecal-oral. Hepatitis E is also fecal-oral but is rare in the U.S. and doesn't have a widely used vaccine.

NEW QUESTION # 21

Which of the following actions are appropriate management for two-rescuer pediatric basic life support? Select the three correct options.

- A. Perform rescue breathing at a rate of 20 per minute
- B. Compress at a rate of 180 per minute
- C. Start CPR if the pulse rate is 72
- D. Perform compressions at a ratio of 15:2
- E. Use the two-thumb-encircling-hands technique for infants
- F. Compress the chest one-half the diameter of the chest

Answer: D,E,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

For pediatric BLS with two rescuers, current AHA Guidelines (2020) recommend:

* Two-thumb encircling hands technique: Most effective for infants; provides consistent depth and control.

* Compression ratio of 15:2: Enhances ventilation without compromising perfusion.

* Compression depth: 1/3 of chest or approximately one-half the chest's depth.

CPR begins if pulse <60 bpm with signs of poor perfusion, not at 72 bpm. Rate of 80/min is excessive; ideal rate is 100-120/min.

NEW QUESTION # 22

A law enforcement officer requests that you place the clothes from a sexual assault victim in a bag for transport to the hospital.

Which type of bag should you use?

- A. Cloth
- **B. Paper**
- C. Plastic
- D. Polypropylene

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In cases of sexual assault, preserving evidence integrity is critical. Clothing or other forensic evidence must be placed in paper bags.

Plastic or non-breathable materials can trap moisture, promoting mold or degradation of evidence like DNA or bodily fluids.

This approach follows chain-of-custody protocols used by law enforcement and medical facilities for handling forensic material.

NEW QUESTION # 23

In order for a plaintiff to recover damages in a lawsuit against an EMT, there must be a duty to perform, breach of duty, damage, and

- A. Abandonment
- B. Contributory neglect
- C. Malfeasance
- **D. Proximate causation**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To establish negligence, four legal elements must be proven:

- * Duty to act- a legal obligation to provide care.
- * Breach of duty- failing to meet the standard of care.
- * Damages- harm occurred.
- * Proximate causation- the breach directly caused the damage.

"Proximate causation" means the EMT's action or inaction is closely linked to the harm suffered by the patient.

NEW QUESTION # 24

A choking patient becomes unresponsive. What should the EMT perform next? Select the two correct options.

- **A. Begin chest compressions**
- **B. Check for a pulse**
- C. Position the patient in recovery and administer back blows
- D. Do not ventilate until the foreign body is removed
- E. Open the airway and look in the mouth

Answer: A,B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

If a choking patient becomes unresponsive, EMTs should:

- * Check for a pulse
- * Begin chest compressions if no pulse is found. Chest compressions can help dislodge the object. After compressions, the airway

should be opened and inspected. Back blows are not appropriate for unconscious patients.

Ventilation is attempted after clearing the airway or if no object is seen. Do not withhold compressions waiting for object removal.
