

# Fortinet NSE 7 - Public Cloud Security 7.6 Architect valid exam simulator & Fortinet NSE 7 - Public Cloud Security 7.6 Architect exam study torrent & Fortinet NSE 7 - Public Cloud Security 7.6 Architect test training guide

## NSE Certification Program EXAMINATION SUMMARY REPORT FCSS - Public Cloud Security 7.6 Architect

Candidate Name: [Redacted]  
Registration Number: [Redacted]  
Examination Date: October 14, 2025  
Grade: Pass

Congratulations on passing the FCSS - Public Cloud Security 7.6 Architect exam!

Our company, with a history of ten years, has been committed to making efforts on developing NSE7\_CDS\_AR-7.6 exam guides in this field. Since the establishment, we have won wonderful feedback from customers and ceaseless business and continuously worked on developing our NSE7\_CDS\_AR-7.6 exam prepare to make it more received by the public. Moreover, our understanding of the importance of information technology has reached a new level. Efforts have been made in our experts to help our candidates successfully Pass NSE7\_CDS\_AR-7.6 Exam. Seldom dose the e-market have an authorized study materials for reference.

### Fortinet NSE7\_CDS\_AR-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Security Solutions Deployment: This domain covers deploying Fortinet solutions to protect IaaS and CaaS environments, and integrating them with cloud native security tools.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Troubleshooting: This domain involves resolving connectivity issues in AWS and Azure environments, including diagnosing problems with SDN connectors.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Cloud Infrastructure Monitoring: This domain addresses monitoring AWS and Azure networks using Fortinet monitoring tools designed for cloud workload visibility and management.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Automation Tools: This domain focuses on using infrastructure-as-code tools like Terraform, Ansible, Azure Bicep, and AWS CloudFormation to automate cloud infrastructure and Fortinet solution deployments.</li></ul>

### Test NSE7\_CDS\_AR-7.6 Simulator Online & NSE7\_CDS\_AR-7.6 Download

We guarantee that if you study our NSE7\_CDS\_AR-7.6 guide materials with dedication and enthusiasm step by step, you will desperately pass the exam without doubt. As the authoritative provider of study materials, we are always in pursuit of high pass rate of NSE7\_CDS\_AR-7.6 practice test compared with our counterparts to gain more attention from potential customers. Otherwise if you fail to pass the exam unfortunately with our NSE7\_CDS\_AR-7.6 Study Materials, we will full refund the products cost to you soon. Our NSE7\_CDS\_AR-7.6 study torrent will be more attractive and marvelous with high pass rate.

## Fortinet NSE 7 - Public Cloud Security 7.6 Architect Sample Questions (Q23-Q28):

### NEW QUESTION # 23

Refer to the exhibit. An administrator used the what-if tool to preview changes to an Azure Bicep file. What will happen if the administrator decides to apply these changes in Azure?

```
what-if tool
Resource and property changes are indicated with these symbols:
- Delete
+ Create
~ Modify

The deployment will update the following scope:
Scope: /subscriptions/./resourceGroups/DemoGroup
~ Microsoft.Network/virtualNetworks/ServerApps_vnet [2023-11-01]
  - tags.Owner: "AppAdmins"
  ~ properties.addressSpace.addressPrefixes: [
    - 0: "10.0.0.0/16"
    + 0: "192.168.0.0/24"
  ]
  ~ properties.subnets: [
    ~ 0:
      ~ properties.addressPrefix: "10.0.1.0/24" => "10.0.2.0/24"
  ]
]
Resource changes: 1 to modify.
```

- A. A new subnet will be added to ServerApps.
- B. Subnet 10.0.1.0/24 will replace subnet 10.0.2.0/24.
- C. This deployment will fail and no changes will be applied.
- D. The ServerApps VNet will be renamed.

**Answer: A**

Explanation:

The what-if output shows that the ServerApps VNet will be modified:

- \* A new address prefix 192.168.0.0/24 will be added.
- \* An existing subnet will be modified from 10.0.1.0/24 to 10.0.2.0/24.

Since these are additive and modification changes within the VNet, the result is that a new subnet will be added alongside the update to the existing subnet.

### NEW QUESTION # 24

Refer to the exhibit. What is the purpose of this section of an Azure Bicep file?

```
@allowed([
    '7.2'
    '7.4'
    '7.6'
])
```

- A. To document the FortiOS versions in the resulting topology
- **B. To restrict which FortiOS versions are accepted for deployment**
- C. To indicate the correct FortiOS upgrade path after deployment
- D. To add a comment with the permitted FortiOS versions that can be deployed

**Answer: B**

**NEW QUESTION # 25**

An administrator is trying to implement FortiCNP with Microsoft Azure Security integration. However, FortiCNP is not able to extract any cloud integration data from Azure; therefore, real-time cloud security monitoring is not possible.

What is causing this issue?

- A. The organization is using a free Azure AD license.
- B. The administrator enabled the wrong defender plan for servers.
- **C. The Azure account doesn't have the global administrator role.**
- D. The FortiCNP account in Azure has the Storage Blob Data Reader role.

**Answer: C**

**NEW QUESTION # 26**

Refer to the exhibit.

**FortiCNP finding**

Finding ID: 10c73cc77e8c2a4f2e7999d510463d82

Policy Name: Suspicious Location

Object: linux\_rpm\_x86\_64.zip

Created: 2024/10/02, 05:53:40 PM

Activity Type: Download File

Activity Link: 1

IP: 3 [redacted]

Description: user did DOWNLOAD\_FILE in Dublin, United States which is not in the allow list.

Context Name: Suspicious Location 2

Object ID: ZCKURaKAGVLhTy8IXFINKQ9ZaKO

Last Update: 2024/10/02, 05:53:40 PM

User: i-005029f77d522a0bf

DLP Matches: 0

Country/Region: United States, Dublin

Which FortiCNP policy type generated the finding shown in the exhibit? (Choose one answer)

- A. This finding was generated by a risk management policy.
- **B. This finding was generated by a threat detection policy.**
- C. This finding was generated by a data scan policy.
- D. This finding was generated by a file collection policy.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From FortiOS 7.6, FortiWeb 7.4 Exact Extract study guide:

Based on the FortiCNP 22.4/24.4 Administration Guide and the Fortinet Cloud Security Study Guide, findings in FortiCNP are categorized by the specific policy type that triggered the alert.

\* Threat Detection Policy (Option B): This policy category is designed to monitor and alert on anomalous User Activity and Network threats. Specifically, "Suspicious Location" is a predefined threat detection rule that triggers when a user performs an action (such as a Download File as seen in the exhibit) from a geographic location or IP address that is not on the organization's allow list or deviates from established behavioral baselines. The exhibit explicitly shows the "Activity Type" as "Download File" and the "Policy Name" as "Suspicious Location," both of which fall under the Threat Detection > User Activity policy tab.

\* Policy Hierarchy and Finding Types:

\* Threat Detection: Includes User Activity (Suspicious Location, Suspicious Time, Suspicious Movement) and Network findings.

\* Data Scan Policy (Option A): These policies are used for content-level inspection, such as searching for Malware or Data Loss Prevention (DLP) patterns like credit card numbers within files.

\* Risk Management Policy (Option C): These policies focus on Cloud Security Posture Management (CSPM), alerting on misconfigurations such as unencrypted buckets or disabled logging (e.g., CloudTrail).

\* File Collection (Option D): While "File Collection" is a configuration object used to define a group of files for monitoring, it is not the policy type that generates a behavioral alert like "Suspicious Location".

#### NEW QUESTION # 27

Your monitoring team reports performance issues with a web application hosted in Azure. You suspect that the bottleneck might be due to unexpected inbound traffic spikes. Which method should you use to identify and analyze the traffic pattern?

- A. Deploy Azure Firewall to log traffic by IP address.
- **B. Enable NSG Flow Logs and analyze logs with Azure Monitor.**
- C. Use Azure Traffic Manager to visualize all traffic to the application.
- D. Enable Azure DDoS protection to prevent inbound traffic spikes.

**Answer: B**

Explanation:

To identify and analyze inbound traffic patterns, you should enable NSG Flow Logs and analyze them with Azure Monitor. This provides detailed insights into traffic flows, including source/destination IPs, ports, and volume, which helps detect spikes or unusual traffic behavior affecting the web application.

## NEW QUESTION # 28

.....

Our company is a professional certificate exam materials provider, therefore we have rich experiences in offering exam dumps. NSE7\_CDS\_AR-7.6 study materials are famous for high quality, and we have received many good feedbacks from our customers, and they think highly of our NSE7\_CDS\_AR-7.6 exam dumps. Moreover, we also pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you refund and no other questions will be asked. NSE7\_CDS\_AR-7.6 Training Materials have free update for 365 days after purchasing, and the update version will be sent to you email automatically.
