200-901認證題庫，200-901熱門認證

目前，全球500強中的90%企業都在使用 Cisco 公司的產品。200-901 認證是全球專業認證各領域中的權威認證。在IT世界裡，擁有 Cisco 200-901 認證已成為最合適的加更簡單的方法來達到成功。這意味著，考生應努力通過考試才能獲得認證。而 Fast2test 考題大師致力與為客戶提供 200-901 認證的全真考題及認證學習資料，能夠幫助妳一次通過 200-901 認證考試。

該考試涵蓋了一系列主題，包括軟體開發和設計原理，API，Cisco平台和開發工具，應用程序部署和安全以及基礎架構和自動化。通過考試的候選人將證明他們在思科平台上開發和部署應用程序的能力，以及他們對如何設計和實施滿足組織需求的解決方案的理解。Cisco DevNet副認證是希望促進職業並展示其在該領域的專業知識的開發人員的寶貴證書。

最新的 Cisco Certified DevNet Associate 200-901 免費考試真題 (Q216-Q221):

問題 #216

How are load balancers used in modern application deployment?

- A. Allow http and https traffic to continue as old compute units are discontinued before new units are brought up.
- B. Bring up new compute units, test the compute units, and switch the traffic from old units to new units.
- C. Turn off traffic and take down compute units, then update and bring the compute units back up.
- **D. Allow traffic to continue as new compute units are brought up and old compute units are taken down.**

答案: D

解題說明:

Load balancers distribute network or application traffic across multiple servers to ensure no single server becomes overwhelmed. In modern application deployment, load balancers allow traffic to continue smoothly as new compute units are brought online and old units are decommissioned. This ensures high availability and reliability of services.

問題 #217

Refer to the exhibit.

What are two results of running the RESTCONF query? (Choose two.)

- A. GigabitEthernet1 becomes shut down.
- B. Interfaces are created as containers.
- **C. GigabitEthernet2 becomes shut down.**
- **D. Descriptions for two interfaces are applied.**
- E. The module letf-interfaces:interfaces is created.

答案: C,D

解題說明:

The provided RESTCONF query is configuring network interfaces using the YANG data model. Based on the JSON data:

* GigabitEthernet1: This interface has an enabled status set to true and an IP address configured.

* GigabitEthernet2: This interface has an enabled status set to false, which means it is being shut down.

* GigabitEthernet3: This interface is also set with an enabled status of false.

The descriptions for these interfaces are also included in the configuration, so the descriptions for two interfaces (GigabitEthernet1 and GigabitEthernet2) are applied.

References:

問題 #218

A resource named /item is protected by OAuth2 authentication. An endpoint named /login must request authentication. Which method must be used to access the resource by using the REST API?

- A. Make a GET call to /login that includes the username and password, and retrieve a token to insert into the /item call.
- B. Make a GET call to /item, then make a call to /login that includes the username and password in the body of the message, and wait for the authorization code.
- **C. Make a POST call to /login including the user credentials in the message, and retrieve a token to insert into the authorization header of the /item call.**
- D. Make a POST call to /item that includes the username and password in the body of the request message, and submit it to request access.

答案: C

解題說明:

When using OAuth2 authentication for accessing a protected resource via a REST API, the typical flow involves obtaining an access token which can then be used to authenticate subsequent API requests. The correct process is:

POST Call to /login: Make a POST request to the /login endpoint with the user credentials (username and password) in the request

Use the Token: Use the retrieved token by including it in the Authorization header (usually as a Bearer token) in the request to access the protected resource, in this case, the /item endpoint.

OAuth 2.0 Authorization Framework - RFC 6749

Drag and drop the code snippets from the bottom to the blanks in the code to complete the HTTP response. Not all options are used.

Graphical user interface, text, application Description automatically generated

- A. `git merge --squash feat00304`
- B. `git checkout --squash feat00304`
- C. `git push --rebase feat00304`
- D. `git rebase --merge feat00304`
