## CompTIA Project+ Certification Exam Sample Questions (Q379-Q384):

NEW QUESTION # 379

A project team is developing an application that will allocate a building's parking spaces. The building owner does not agree with using corporate colors in the application and has blocked the release of the beta version for testing. Which of the following best describes what the project manager should have done in the initiation phase to prevent this issue?

- A. Review of existing artifacts
- B. Establishment of accepted communication channels
- C. Development of an issue log
- **D. Identification and assessment of stakeholders**

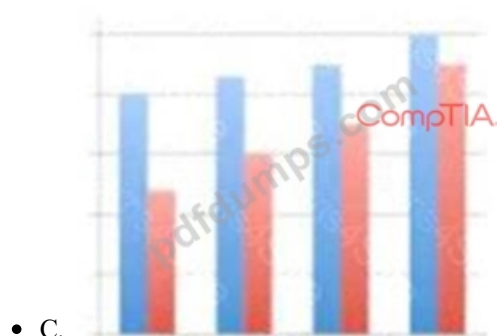

**Answer: D**

Explanation:

The project manager should have identified and assessed the building owner as a key stakeholder in the initiation phase, and understood their expectations and requirements for the application. This would have helped to avoid the conflict over the corporate colors and the delay in testing. Stakeholder identification and assessment is an important process in the initiation phase, as it helps to define the project scope, objectives, and success criteria, and to establish a communication plan<sup>12</sup>. ### NEW QUESTION # 380

During the execution phase of a project, the project team faced an unexpected website downtime. The project manager held a brainstorming session and the team identified causes and effects for the problem. Now the project team needs to analyze and determine whether the particular cause and effect are related by using one of the following charts. Which of the following should the team use?

- D.

**Answer: D**

Explanation:

Option A shows a cause and effect diagram, also known as a fishbone diagram or an Ishikawa diagram<sup>1</sup>. This is a tool that helps to identify and analyze the root causes of a problem by displaying the possible causes and effects in a graphical format<sup>2</sup>. A cause and effect diagram can help the project team to determine whether the particular cause and effect are related by using a systematic and logical approach, such as asking "why" questions or using the 5 Whys technique<sup>3,4</sup>. A cause and effect diagram is better than the other options because:

Option B shows a Gantt chart, which is a tool that helps to plan and track the tasks, dependencies, durations, and resources of a project along a timeline<sup>5</sup>. A Gantt chart does not focus on the causes and effects of a problem, but rather on the sequence and progress of the project activities.

Option C shows a pie chart, which is a tool that helps to compare and visualize the proportions of different categories or segments of data<sup>6</sup>. A pie chart does not show the relationships between the causes and effects of a problem, but rather the distribution of the data values.

Option D shows a scatter plot, which is a tool that helps to examine the correlation or association between two variables or sets of data<sup>7</sup>. A scatter plot does not show the causes and effects of a problem, but rather the pattern or trend of the data points.

- C. The team member had performance issues over time.
- D. This is a display of units of outstanding work to predict completion
