Latest EAEP2201 Exam Online - Testking EAEP2201 Learning Materials

As we all know, the preparation process for an exam is very laborious and time-consuming. We had to spare time to do other things to prepare for EAEP2201 exam, which delayed a lot of important things. If you happen to be facing this problem, you should choose our EAEP2201 Study Materials. With our study materials, only should you take about 20 - 30 hours to preparation can you attend the exam. The rest of the time you can do anything you want to do to, which can fully reduce your review pressure.

Esri Enterprise Administration Professional 2201 Sample Questions (Q68-Q73):

NEW QUESTION # 68

A GIS administrator receives reports of slow-performing services and notices that disk space is filling up after recent troubleshooting sessions.

In those sessions, the following tasks were performed:

- * Services added to the shared instance pool
- * Log retention settings reduced
- * Log level set to Debug
- * ArcGIS Server machine restarted
- * An additional ArcGIS Server site federated

What is causing this slow performance?

- A. Restarting ArcGIS Server
- B. Federating the additional ArcGIS Server site
- C. Adjusting the log level to Debug
- D. Additional services in the shared instance pool

Answer: C

Explanation:

Setting the log level to Debug can significantly impact performance and disk space. Debug-level logging writes detailed information about every process and service request to log files, which can rapidly fill up disk space and consume server resources, leading to performance degradation.

From ArcGIS Server documentation:

"The debug log level is used only for troubleshooting specific problems and should not be used in a production environment as it can negatively affect performance and result in excessive disk space usage."

* Option A is partially valid, but shared instance pooling is designed for efficient resource use and generally improves performance when used properly.

* Option C is unrelated to performance directly unless misconfigured.

* Option D (restart) is typically neutral or helpful.

NEW QUESTION # 69

An ArcGIS administrator executes a script to silently upgrade all components of ArcGIS Enterprise version 10.6.1 to version 10.9.1. The upgrade completes without logging any errors.

When the administrator logs in, the following message appears: "Members in your organization were assigned the Standard (Temporary) or Lite (Temporary) user types. No users can log in to the Portal." What is causing these issues?

- A. The Portal for ArcGIS upgrade process requires a restart of the Portal for ArcGIS service when adding additional user types.
- B. The organization has level 2 members and the new license file used for the upgrade now has more than one compatible user type.
- C. The portal has no internet access, and the Software Authorization Wizard could not connect to Esri to validate the new license file.

Answer: B

Explanation:

During the upgrade from ArcGIS Enterprise 10.6.1 to 10.9.1, user type licensing is enforced. If the new license file includes more than one compatible user type (e.g., Creator and GIS Professional), existing members without a specified user type may be assigned temporary user types like "Standard (Temporary)" or

"Lite (Temporary)." These temporary assignments prevent users from logging in until valid user types are manually assigned.

This issue is not related to internet access (Option B) or the need to restart services (Option C).

Reference Source: ArcGIS Enterprise documentation on user type licensing during upgrades

NEW QUESTION # 70

An organization experiences a temporary loss of service for its ArcGIS Enterprise deployment due to expired licenses. What should the administrator have done to prevent this issue?

- A. Create a Python script to run an administrative report and schedule the script to run regularly
- B. Use the license file in read-only mode to extend the license
- C. Configure the ArcGIS Enterprise portal to send an automated email when the portal license is expiring
- D. Design an information banner to automatically display the license expiration date

Answer: C

NEW QUESTION # 71

An organization buys an additional 25 licenses for ArcGIS Pro and needs to assign the licenses to ArcGIS Enterprise users. Which license file is required to make those assignments?

- A. New license file with just the 25 ArcGIS Pro licenses
- B. Any existing license file used previously
- C. An updated license file with only the 25 additional ArcGIS Pro licenses
- D. An updated license file with 25 additional ArcGIS Pro licenses

Answer: D

Explanation:

When an organization purchases additional licenses (e.g., ArcGIS Pro), a new combined license file must be generated that includes both the existing entitlements and the newly purchased ones. This updated license file reflects the total number of licenses (original + new).

From the ArcGIS Enterprise Licensing documentation:

"When downloading a new license file from My Esri to assign additional licenses, the license file must reflect the complete set of user types and extensions required. You must generate a new license file that includes both the existing and new entitlements."

* Option A is incorrect because a license file with only the new licenses would overwrite the previous file.

* Option B is incorrect for the same reason—partial license files are not valid for merging with existing licenses.

* Option D does not accommodate the new licenses.

NEW QUESTION # 72

An ArcGIS Enterprise administrator wants to publish their feature classes as layers in bulk from a registered geodatabase. Which action should the administrator perform?

- A. Import an SDE connection file into ArcGIS Server Administrator Directory
- B. Register the geodatabase in ArcGIS Server Manager
- C. Register as a hosted layer in ArcGIS Data Store
- D. Create a data store item in the ArcGIS Enterprise portal

Answer: B

Explanation:

To publish feature classes as services in bulk from an enterprise geodatabase, it must first be registered with the ArcGIS Server site. This registration tells ArcGIS Server where to access the data directly for referenced service publishing. The proper way to do this is through ArcGIS Server Manager.

From ArcGIS Enterprise documentation:

"To publish layers directly from a registered enterprise geodatabase without copying data, you must register the geodatabase with your ArcGIS Server site using ArcGIS Server Manager."

* Option B is used for hosted services, not referenced publishing.

* Option C is not the correct interface for registering data sources.

* Option D involves hosting data, which is not applicable for referenced layers from a geodatabase.
