You just need an active internet connection to confirm the license of your

product. All Windows-based computers support this 156-315.82 practice exam software.

CheckPoint Check Point Certified Security Expert - R82 Sample Questions (Q106-Q111):

NEW QUESTION # 106

Which tool can be used to automate upgrades and hotfixes installation?

- A. DA
- B. CPUSE
- C. API
- D. CDT

Answer: C

Explanation:

The Check Point API can be used to automate upgrades and hotfix installations across multiple gateways or management servers, enabling scripted and repeatable deployment processes without manual intervention.

NEW QUESTION # 107

Where can Firewall administrator configure VPN routes between Security Gateways?

- A. vpn_route.conf (on Security Management)
- B. via Gaia Portal or CLI (on Security Gateway)
- C. vpn_route.conf (on Security Gateway)
- D. VTI_route.conf (on Security Management)

Answer: C

Explanation:

VPN routes are configured on each Security Gateway in the vpn_route.conf file, where administrators define static or special routing behavior for VPN traffic that cannot be handled through standard routing or automatic mechanisms.

NEW QUESTION # 108

In Management HA, changes in policy and object are performed through the active server. What happens if the active server fails or is taken offline?

- A. The closest standby server will immediately become active within 3 seconds
- B. One of the standby servers must be promoted to Primary Management Server to make it active
- C. A changeover can be initiated manually to make a standby server become active
- D. The standby server with the highest priority set by the administrator automatically becomes active

Answer: C

Explanation:

In Management High Availability, failover is manual by default, so if the active server fails or is taken offline, an administrator must manually initiate a changeover to promote a standby server to become the active server.

NEW QUESTION # 109

Select the most appropriate statement regarding the Management HA Solution.

- A. After installing the Primary Management Server, one or more Secondary Management Servers may be installed for redundancy and database backup
- B. The Management Server which is nearest to a Security Gateway becomes its Primary Management Server
- C. After installing the Primary Management Server, only one Secondary Management Server can be deployed in the same environment
- D. A Management Server running in the Active mode is called the Primary Management Server

Answer: A

Explanation:

In a Management HA setup, after deploying the Primary Management Server, one or more Secondary Management Servers can be added to provide redundancy and maintain synchronized copies of the management database for failover purposes.

NEW QUESTION # 110

What kind of information would you expect to see when using the "sim affinity -I" command?

- A. The involved firewall kernel modules in inbound and outbound packet chain
- **B. Affinity Distribution**
- C. The VMACs used in a Security Gateway cluster
- D. Overview over SecureXL templated connections

Answer: B

NEW QUESTION # 111

.....
