Free Mule-101 Updates | Mule-101 Latest Exam Preparation

In the matter of quality, our Mule-101 practice engine is unsustainable with reasonable prices. Despite costs are constantly on the rise these years from all lines of industry, our Mule-101 learning materials remain low level. That is because our company beholds customer-oriented tenets that guide our everyday work. The achievements of wealth or prestige is no important than your exciting feedback about efficiency and profession of our Mule-101 Study Guide.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which Anypoint Platform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

- A. MDint (Likely typo in PDF, refers to MUnit or similar tools)
- B. API Manager
- C. Runtime Manager
- **D. API Designer**

Answer: D

Explanation:

Design-First Approach: The lifecycle starts with Design.

API Designer: This is the web-based tool within Design Center where developers write the API contract using RAML (RESTful API Modeling Language) or OAS (OpenAPI Specification). 9 Functionality: It provides syntax highlighting, error checking, and a "Mocking Service" that allows you to test the API's behavior before writing any actual code.

Why others are incorrect:

API Manager: Used after design to manage policies and gateways.

Runtime Manager: Used after build to deploy the application.

NEW QUESTION # 43

According to MuleSoft, what action should an IT organization take regarding its technology assets in order to close the IT delivery gap?

- A. Make assets easily discoverable via a central repository
- B. Focus project delivery efforts on custom assets that meet the specific requirements of each individual line of business
- C. Hire additional staff to meet the demand for asset creation required for approved projects and timelines
- D. Create weekly meetings that all members of IT attend to present justification and request approval to use existing assets

Answer: A

Explanation:

The Key to Speed: You cannot close the delivery gap by working harder (hiring more staff) or by creating custom code for every project (custom assets). You must leverage Reuse.

Discoverability is Critical: Reuse is impossible if developers don't know that an asset exists.

Anypoint Exchange: By publishing assets (APIs, connectors, fragments) to a central repository (Exchange) and making them searchable and documented, organizations enable "Self-Service." Developers can find what they need instantly, drastically reducing the time to deliver new projects.

NEW QUESTION # 44

According to the Internet Engineering Task Force (IETF), which supporting protocol does File Transfer Protocol (FTP) use for reliable communication?

- A. Lightweight Directory Access Protocol (LDAP)
- B. Secure Sockets Layer (SSL)
- C. Hypertext Transfer Protocol (HTTP)
- D. Transmission Control Protocol (TCP)

Answer: D

Explanation:

TCP (Transmission Control Protocol): FTP is an application-layer protocol that relies on TCP at the transport layer to ensure reliable, ordered, and error-checked delivery of a stream of bytes¹².

Mechanism: FTP establishes two TCP connections: one for control (commands) and one for data transfer.

Why others are incorrect:

UDP: Is unreliable (best effort).

HTTP: Is an alternative application protocol, not the transport layer for FTP.

LDAP: Is for directories.

NEW QUESTION # 45

A platform architect includes both an API gateway and a service mesh in the architecture of a distributed application for communication management.

- A. Between the application and external API implementations
- B. Between the application and external API clients
- C. Between services within the application
- D. Between application services and the firewall

Answer: C

Explanation:

Service Mesh vs. API Gateway:

API Gateway: Typically manages North-South traffic (traffic entering the application network from external clients).

Service Mesh: Is designed to manage East-West traffic (traffic flowing between microservices within the application network or cluster).

Anypoint Service Mesh: It manages, secures, and observes communication between services within the application (microservices), ensuring zero-trust security and policy enforcement inside the Kubernetes cluster.

NEW QUESTION # 46

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

- **A. Customer Relationship Management (CRM)**
- B. Supply Chain Management (SCM)
- C. IT Service Management (ITSM)
- D. Business-to-Business (B2B)

Answer: A

Explanation:

Customer Relationship Management (CRM): A CRM system (like Salesforce) is specifically designed to manage a company's interactions with current and potential customers⁵.

Key Functionality: It stores contact information, identifies sales opportunities, records service issues, and manages marketing campaigns—perfectly matching the requirement to "increase cross-selling" and "track prospect data"⁶.

Why others are incorrect:

SCM: Manages the flow of goods and services (logistics/inventory)⁷.

ITSM: Manages IT services (help desk tickets)⁸.

B2B: Refers to the exchange of products/services between businesses, not the system of record for prospect data⁹.

NEW QUESTION # 47

.....

With limited time for your preparation, many exam candidates can speed up your pace of making progress. Our Mule-101 practice materials will remedy your faults of knowledge understanding for our Mule-101 exam questions contain everything you need in the real Mule-101 exam. You won't regret your decision of choosing our Mule-101 training guide. In contrast, they will inspire your potential without obscure content to feel. After getting our Mule-101 exam prep, you will not live under great stress during the exam period.
