

F5CAB1 practice materials & F5CAB1 real test & F5CAB1 test prep

DOWNLOAD the newest DumpsFree F5CAB1 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1xpLwZuYxsTKhF_08GwCLPydEYFfu0V4f

If you want to pass the F5CAB1 exam then you have to put in some extra effort, time, and investment then you will be confident to pass the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) exam. With the complete and comprehensive F5 F5CAB1 Exam Dumps preparation you can pass the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) exam with good scores. The F5 F5CAB1 Questions can be helpful in this regard. You must try this.

F5 F5CAB1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• BIG IP Administration Data Plane Concepts: This section of the exam measures skills of Network Administrators and covers how BIG IP handles application traffic on the data plane. It includes understanding flow of traffic, key data path components, basic concepts of load balancing, and how security and performance features affect user traffic.
Topic 2	<ul style="list-style-type: none">• BIG IP Administration Support and Troubleshooting: This section of the exam measures skills of Network Administrators and covers identifying and resolving common issues that affect BIG IP operation. It focuses on using logs, statistics, diagnostic tools, and basic troubleshooting methods to restore normal traffic flow and maintain stable application delivery.
Topic 3	<ul style="list-style-type: none">• BIG IP Administration Control Plane Administration: This section of the exam measures skills of System Administrators and covers managing the control plane where BIG IP is configured and administered. It includes working with user accounts, roles, device settings, configuration management, and using the graphical interface and command line for daily administrative tasks.

Topic 4	<ul style="list-style-type: none"> • BIG IP Administration Data Plane Configuration: This section of the exam measures skills of System Administrators and covers configuring BIG IP objects that control data plane behavior. It focuses on setting up virtual servers, pools, nodes, monitors, and profiles so that applications are delivered reliably and efficiently according to design requirements.
Topic 5	<ul style="list-style-type: none"> • BIG IP Administration Install Initial Configuration and Upgrade: This section of the exam measures skills of System Administrators and covers the lifecycle tasks for deploying and maintaining a BIG IP system. It includes installing the platform, performing initial setup, applying licenses, configuring basic networking, and planning and executing software upgrades and hotfixes.

F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which of the following are resource allocation settings for modules? (Pick the 2 correct responses below)

- A. Nominal
- B. Limited
- C. Maximum
- D. Dedicated

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration - Install, Initial Configuration, and Upgrade:

When provisioning modules on a BIG-IP system, F5 provides specific resource allocation settings that define how system resources - CPU, memory, and disk - are distributed to each licensed module. The two valid and officially recognised allocation settings are Nominal and Dedicated .

Nominal instructs the system to allocate a moderate, balanced share of resources to the module. It allows the module to function effectively while sharing system resources with other provisioned modules. This is the most commonly used setting in multi-module deployments.

Dedicated allocates the maximum available system resources exclusively to a single module. When this setting is applied, it is typically the only module provisioned, as it consumes resources at a level that prevents other modules from operating concurrently in a meaningful capacity.

Option A - Maximum is not a valid BIG-IP provisioning allocation level; it does not appear in the official provisioning interface or documentation as a selectable resource tier.

Option C - Limited similarly does not exist as a defined resource allocation setting within BIG-IP module provisioning. It may superficially resemble valid terminology but has no standing in the official provisioning framework.

Administrators access these settings via System > Resource Provisioning in the Configuration Utility, where each licensed module displays its available allocation options.

Reference Topics: Module Resource Provisioning, Nominal vs. Dedicated Allocation, System Resource Management - BIG-IP Administration Study Guide.

NEW QUESTION # 24

The BIG-IP Administrator uses Secure Copy Protocol (SCP) to upload a TMOS image to the /shared/images/ directory in preparation for a TMOS upgrade.

After the upload is completed, what will the system do before the image is shown in the GUI under:

System » Software Management » Image List?

- A. The system performs a reboot into a new partition
- B. The system copies the image to /var/local/images/
- **C. The system verifies the internal checksum**

Answer: C

Explanation:

When a TMOS image (.iso file) is uploaded into the /shared/images/ directory, the BIG-IP performs an internal validation step before the ISO appears in the GUI.

1. The system verifies the internal checksum

- * BIG-IP automatically reads the embedded checksum inside the ISO file
- * Verifies integrity of the uploaded image
- * Confirms the file is not corrupted or incomplete
- * Ensures the image is a valid F5 TMOS software image

Only after this checksum verification succeeds does the image appear under:

System # Software Management # Image List

Why the other options are incorrect:

A). The system performs a reboot into a new partition

- * Uploading an ISO file never triggers a reboot.

C). The system copies the image to /var/local/images/

- * All valid TMOS images remain in /shared/images/.
- * No copying occurs.

NEW QUESTION # 25

Which of the following actions is NOT required during the initial setup of a BIG-IP system?

- A. Set up self-IPs
- B. Install a software license
- C. Assign an administrative password
- **D. Set up SSL certificates**

Answer: D

Explanation:

Setting up SSL certificates is typically done after the initial setup, not during it. The main tasks during initial setup involve network configuration and licensing.

NEW QUESTION # 26

A BIG-IP Administrator needs to install a HotFix on a standalone BIG-IP device, which has HD1.1 as the Active Boot Location.

The administrator has already re-activated the license and created a UCS archive.

In which sequence should the administrator perform the remaining steps?

- A. Install HotFix in HD1.1, Reboot the BIG-IP device, Install UCS Archive
- B. Activate HD1.2, Install base Image in HD1.2, Install HotFix in HD1.2
- **C. Install base Image in HD1.2, Install HotFix in HD1.2, Activate HD1.2**
- D. Install HotFix in HD1.2, Install base Image in HD1.2, Activate HD1.2

Answer: C

Explanation:

When installing a HotFix on a BIG-IP device, F5 best practices require:

- * Installing the base TMOS image on a new, unused boot volume (HD1.2)
- * This ensures the upgrade happens on a clean volume.
- * The existing active boot location remains untouched for rollback.
- * Installing the HotFix onto the SAME new boot volume (HD1.2)
- * HotFixes must be applied on top of a base version.
- * They cannot be installed on an empty volume.

- * They must match the base image version.
- * Activating the new boot volume (HD1.2)
- * The system reboots into the updated software stack.
- * Activation happens after base + HotFix installation is complete.

This sequence is exactly shown in Option C:

Install base Image in HD1.2

Install HotFix in HD1.2

Activate HD1.2

Why the other options are incorrect:

A). Install HotFix before base image

* Impossible.

* HotFix requires an installed base version first.

B). Installing HotFix on HD1.1 (active boot volume)

* Not recommended.

* Upgrading in-place removes rollback safety.

* HotFix cannot be applied cleanly without applying base image first.

D). Activate HD1.2 before installing anything

* You cannot activate an empty boot volume.

* Activation only occurs after the base + HotFix software is installed.

NEW QUESTION # 27

The BIG-IP Administrator uses Secure Copy Protocol (SCP) to upload a TMOS image to the /shared/images/ directory in preparation for a TMOS upgrade.

After the upload is completed, what will the system do before the image is shown in the GUI under:

System > Software Management > Image List?

- A. The system performs a reboot into a new partition
- B. The system copies the image to /var/local/images/
- C. The system verifies the internal checksum

Answer: C

Explanation:

When a TMOS image (.iso file) is uploaded into the /shared/images/ directory, the BIG-IP performs an internal validation step before the ISO appears in the GUI.

1. The system verifies the internal checksum

BIG-IP automatically reads the embedded checksum inside the ISO file

Verifies integrity of the uploaded image

Confirms the file is not corrupted or incomplete

Ensures the image is a valid F5 TMOS software image

Only after this checksum verification succeeds does the image appear under:

System -> Software Management -> Image List

NEW QUESTION # 28

.....

For candidates who preparing for the exam, knowing the latest information for the exam is quite necessary. F5CAB1 exam cram of us can offer free update for 365 days for you, and we have skilled professionals examine the update every day, once we have the update version, we will send you the first time. F5CAB1 training materials is not only high-quality, but also contain certain quantity, therefore they will be enough for you to pass the exam. We have a professional service team, and the service staffs have professional knowledge for F5CAB1 Exam Materials, if you have any questions, you can consult us.
